Casino TRS80 6
21's the name of this game — always a favourite with you computer games players.

News 13
Get the low-down on the games software scene with this month's news.

Penalty BBC 16
Footballers must often wonder how on earth you can miss a penalty. I know people who've done it — and you'll be one of them in this great little BBC game.

LETTERS
The Runaway Robot Replies 23
Now you get your chance to tell everyone about your pet likes and dislikes.

The Final Frontier VIC 20 29
Captain Kirk has nothing to do with this game. Not only will you get lost in space, you'll also probably end up floating up there with your VIC forever!

COMPETITION
Complete your software library 32
With some great new software from Melbourne House, who've already given you such good programs as the Hobbit.

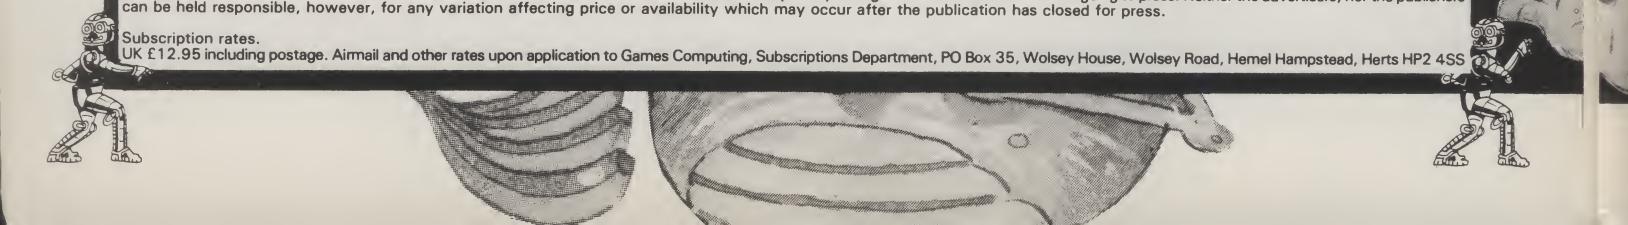

Software Reviews 37
Much more software is under scrutiny by our review team this month and more to follow in future issues too. Don't miss out on it if you are about to buy a new game.

COMPETITION
WIN a Colecovision 44
This fantastic is yours for the taking — providing you enter and come out tops of this competition.

Bomber Run Dragon 53
Fly your life in Bomber Run — a Dragon extravaganza of exhilaration.

Games Computing is normally published on the second Friday in the month preceding cover date. Subscription rates.
UK £12.95 including postage. Airmail and other rates upon application to Games Computing, Subscriptions Department, PO Box 35, Wolsey House, Wolsey Road, Hemel Hempstead, Herts HP2 4SS.

VENTS

Guided Missile VIC 20 58
Head an invasion in your own sitting room — with a little help from your VIC.

COMPETITION

Joystick jamoboree 65
Suncom's giving away some of their top of the range joystick in this competition. Don't miss it if you are after a new or better joystick to play with.

Wargames 66
More about tactical, strategy games of war and how to program them.

Simple Draw VIC 20 71
Here's a nice easy, relaxing game in which you can draw patterns of all shapes and sizes.

SPECIAL REPORT

The British Toy and Hobby Fair 79
This show is fast becoming a major platform for the games software business in the UK. We took a trip down there to see what's going on this year.

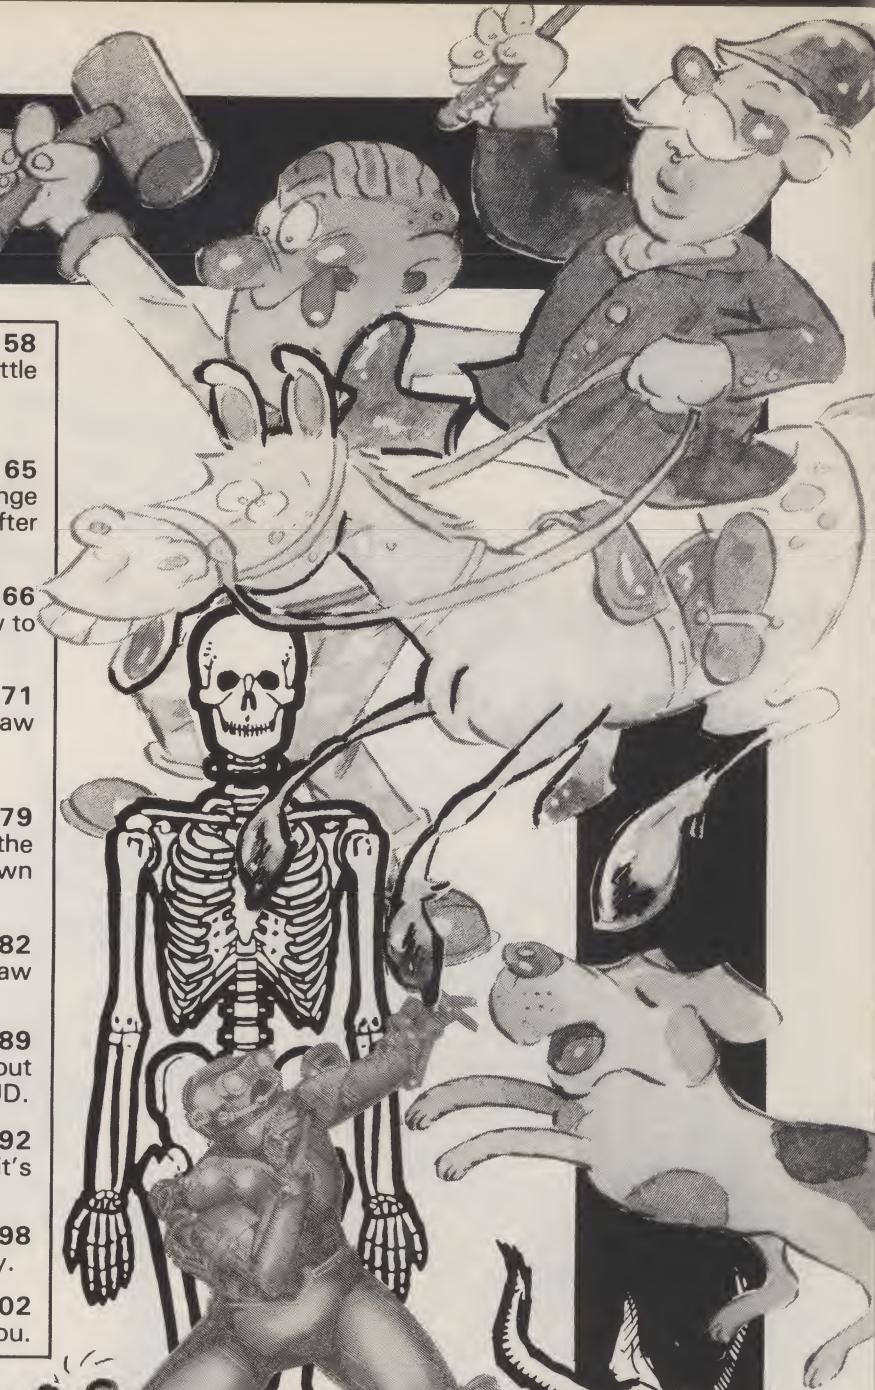

Gunfight TI-99/4A 82
Get off yer hoss, grab yer guns and be quick off the draw for a Texas type John Wayne shoot-out.

The Rockman Files 89
Our interpid software assistant has been finding out about the ultimate computer adventure game — MUD.

Rescue Mission TI-99/4A 92
Unload your craft to keep it airborne — otherwise it's certain doom for you and your crew.

Sea Dog BBC 98
Hunt the enemy warship sailing in your own territory.

Video Vying 102
Video Games galore — what's in store reviewed for you.

Casino

RUNS ON
TRS-80
COLOUR

"Casino" is based on Pontoon, the old favourite enjoyed by Dad's and Grandad's of all ages. "Casino" is an up-dated version of the game which will be enjoyed by all ages. Maybe Dad will find that he will "lose his shirt" to his sons.

The game is played with the thrill and excitement which Monte Carlo creates with the player pitting his skill and cool head against the cold logic of the Banker.

The program is created so that the player has a certain amount of cash and time in which to break the Bank, these can be set at various levels, according to the skill which the player possesses — or at least

The writer promises that the computer chooses its cards without reference to those held by the player — honest!!!

RUNdown

Line	Action
10-150	Title page.
160-600	Instruction.
610-930	Select level.
940-1010	Initialize variables.
1020-1060	Deals one card.
1070-1400	Sets up screen.
1410-1450	Draws outline of card.
1460-1570	Controls are drawing of cards.
1580-1630	Controls the dealing, drawing and playing of your cards.
1640-1960	Updates total of cards.
1970-2070	Checks for bust, pontoon, five card trick etc.
2080-2210	Draws score.
2220-2410	Select Twist or stick.
2420-2460	Twist routine.
2626-2690	Five card trick routine.
2700-2760	Pontoon routine.
2870-2860	Computers Hand.
3120-3110	Ask for stake sub-routine.
3390-3880	End of hand routine.
3890-4020	Run out of time routine.
4030-4160	Run out of money routine.
4170-4130	Broke the bank routine.
4320-4410	End of start again routine.

Conversion Clues

This program should run as it stands on the Tandy Colour Computer with 32K RAM and extended Basic or a Dragon 32.

If you convert the program for any other computer, take into account the following points.

1. The text screen resolution is 32×16 . The graphics work on a grid of 256×192 . All the writing on the graphics screen is DRAW, on most micros it can be printed.
2. The PMODE and SCREEN commands are used to switch from the text to the graphics screen.
3. The DRAW command draws as directed by a string of instructions e.g. U=up. This command also allows things to be scaled up or down by using 'Sx' where X is the factor, by which it is scaled, divided by 4, e.g. a scale of 4 is normally size.

4. The Paint commands fills an area of screen with a certain colour. The colour command changes the colour of the line and filled boxes.

List of Main Variables

Name\$:

ET:
A(52):

COM(5):

T(2,2):

BANK

TS:
CARD\$:

R:

z:
C:
TWIST

TIME/HOURS
MINUTE-
S/TR)

Holds the name of the player.
Holds the level of play.
Holds a record of the cards which are on the screen.
The array is used to stop a card appearing more than once.

Holds the values of the computers five cards. Not all the cards are used most of the time.
Holds the total of both your hand and the computers. And indicates Pontoons, five card tricks etc.

Holds the amount of money in the bank.

The money you have.
Use the DRAW command to draw the outline of card on the screen.

Used to tell sub-routines if they are dealing with your cards or the computers cards.

Set to 1 for your cards.
Set to 2 for computers cards.

Holds the number of cards.
Holds the suite of the card.
The number of times you have twisted.

These four contain information on the time you have been playing and how long until the Casino closes.

More

WINNING GAMES from LYVERSFT

LUNAR RESCUE (48K SPECTRUM)
A team of research scientists are trapped on the moon and you have to pilot the rescue pod from the mother ship and ferry them back safely. But you have only space for one scientist at a time.
100% M/C action with super smooth HI-RES GRAPHICS AND JOYSTICK OPTION.

LIBERATOR (16K/48K SPECTRUM)
This game tests your aim and reactions as you command a gunship on a homeward bound space freighter. Your cargo is the royal treasures of the empire and many people want them.
A machine code presentation that should have you hooked.

THUNDERHAWK (48K SPECTRUM)
Based on the popular arcade game Phoenix. This 100% full colour epic pitches you against the evil Albertrons who are set to destroy your race, five levels of fast action bring you to the command centre of battle fleet, can you finish the job. WITH JOYSTICK OPTION.

GOLF (48K SPECTRUM)
Using M/C graphic routines, a game to absorb the keen novice and the scratch player. Play on a 9 or 18 hole course, with full selection of clubs. Along the greens and fairways hours of addictive sport can be had.

PICTURE PUZZLE (DRAGON 32)
With HI-RES graphics and M/C. You are set the problem of putting the picture back together. Test your skill against the dragon 32 computer. A game guaranteed to hold you spell bound for hours.

ANDROID INVADERS (DRAGON 32)
In a change of tactics the beings beyond the stars have developed an android of human form to do their dirty work. And with the aid of sensor jamming they may prove formidable. Using full colour, M/C, hi-res graphics this game can offer up to 21 levels of combat.

VOYAGER (VIC 20 8 OR 16K)
The mission is simple, but its completion is far from being so. As captain of starship you have all the best facilities at your disposal. Unfortunately the Klingons oppose you. A great M/C version of this classic computer game.

SPHINX (VIC 20 16K)
A riveting, full colour graphic adventure. That pits you against the spells and guardians of the tomb. In your quest to uncover the treasure of the pharaohs. This game will have you enthralled.

BIRD OF PREY (BASIC VIC 20)
Evil baron von fritz is out to kill his cousin, the much loved Prince Rupert. The Baron intends to throw the prince from his plane into the sacred fire pit. But you the eagle of the north will make every endeavour to save your friend Prince Rupert. With colour, sound, this M/C game is a must.

ALSO AVAILABLE:

Demon Driver Basic VIC20 — £5.95

Adam Arrives at last

The CBS Colecovision is to be expanded into a full blown computer system soon, with the addition of the Adam.

Expansion Module 3 turns the Colecovision into an Adam microcomputer. The Adam has 64K of RAM, a full typewriter keyboard, a built-in high speed cassette drive, and an 80 column daisywheel letter quality printer.

The computer is supplied with Smart BASIC on tape and a game, also on tape. A word processor is built in to use the printer.

The computer consists of three parts, the printer, the keyboard which is detached on a coiled cable, and the central processor box which contains the extra 64K and the tape drive.

The computer will be able to support another tape drive and possibly a disc drive. The central processor box plugs into the expansion slot on the front of the Col-ecovision game console, giving the system a very large 'footprint', that is it takes up a lot of desk or table space.

A dedicated Adam will be available later on in the year that does not need to be plugged in to the Colecovision and has a much smaller 'footprint' but can still have a slot to take standard cartridges and Adam joysticks. Adam joysticks are the same as the Colecovision sticks except that they are a cream colour.

The stand alone unit and the plug in unit will be totally compatible. No UK price has yet been set but the price in America is about \$700.

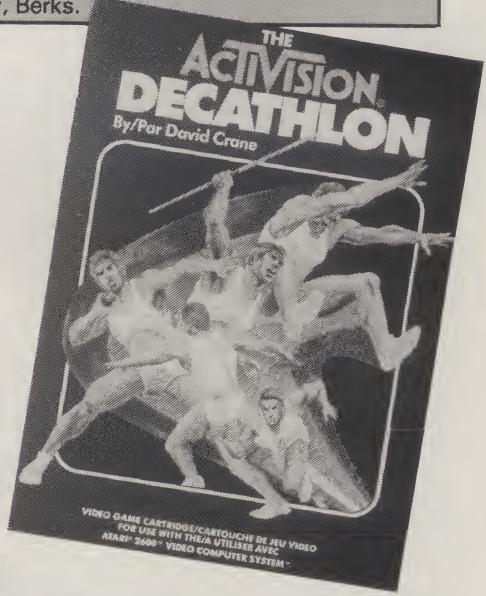

CBS are at Headley Rd East, Woodley, Berks.

Activision Action

New from Activision for the Atari VCS are Decathlon and Space Shuttle A Journey Into Space.

Decathlon is modelled on the olympic decathlon event. You play the part of a competing athlete. Running is accomplished by moving your joystick back and forth, the faster you move the stick the faster your character moves. Your alter ego is made to jump, throw and pole vault by pressing the fire button.

The events that you have to compete in are 100m, 400m, 1500m, 110m hurdles, javelin, shot put, long jump, high jump, pole vault, and discuss. The high jump and pole vault are very realistic with the little man doing a flop over the bar and flicking himself over the pole vault bar.

Up to four players can compete with each other for points just like in a real decathlon.

Space Shuttle is a simulation of a space shuttle flight to rendezvous with a satellite and return to earth again.

There are full graphics throughout the flight with a view out of the cockpit window. Half the screen is taken up with instrumentation.

Activision are also releasing their best selling River Raid for the Mattel Intellivision and Beam Rider for the CBS Colecovision.

All Activision cartridges are £29.95 except those for the Intellivision which retail for £24.95.

Activision are at CGL House, Golding Hill, Loughton, Essex 1G10 1RR.

news

New Releases . . .

Mission Software have just released a novel game for the 48K Spectrum and the Dragon 32 computers. Called *Mission 1 — Project Volcano*, the game is a spy adventure game with secret agents battling it out around the eastern bloc.

With the game you get a passport, various maps, briefings, and instructions also included. The idea is to break the secret code used by the baddies.

So if you are interested in becoming a secret agent, *Project Volcano* is available mail order for £6.95 from **Mission Software**, Command Headquarters, 1st floor, 49 Grange Rd, Darlington, Co Durham DL1 5NB.

Artic Computing have two new releases for the Spectrum 48K called *Monkey Bizness* and *Bear Bovver*.

Monkey Bizness is a 'Kong' based game with the monkey taking our hero's girl up a building. The idea of the game is to get her back. This is not as easy as it sounds as our monkey friend is throwing barrels at you.

Bear Bovver finds you as a bear driving a Sinclair electric buggy. But the car eats up batteries so Ted Bear must be in continual search for batteries for his car. It is not easy to do this though as there are bovver bears out to stop little Ted Bear and if that isn't enough they will set their pet Nasher on to you.

Both games retail at £6.95. Artic are also releasing their much acclaimed adventure series for the Commodore 64. These adventures have previously only been available on the 48K Spectrum.

Artic are at Main St, Brandesburton, Driffield YO25 8RL.

Sinclair and Oric Up-grades

Lots of new machines have been released recently. Sinclair have brought out the long awaited QL computer and Oric have re-engineered the Oric and called it the Oric Atmos.

The QL is aimed at the BBC market at £399 and comes with 128K of RAM, a real keyboard, twin microdrives, 512 by 256 graphics resolution in four colours, or 256 by 256 resolution in eight colours with flashing, and two joystick ports are included as standard but need an adaptor.

A new version of Sinclair BASIC called Super BASIC is in the QL taking up 32K. There is also a ROM cartridge port for the QL that is similar to the Spectrum Interface Two cartridge port but it will not accept the same cartridges.

Oric have set their sights slightly lower with the Atmos. At £170 this machine falls between the Spectrum and the Commodore 64, price wise. The only external difference between the Atmos and the Oric is the case. The top of the Atmos has a real full stroke keyboard that has a very nice feel to it. The colour has changed to a tasteful black with a garish red trim.

The BASIC has altered clearing up the bugs that have caused a lot of problems with the original Orics and bringing in improved cassette operation with the saving and recall of DATA on to tape, a PRINT AT command and controlled auto repeats on the keyboard. The Oric manual has also been totally re-written by an independent author.

To coincide with the Atmos launch, the new re-styled disc drives were announced. Also 'dressed' in black with red trim the drives work with the Hitachi three inch format, and include a full disc operating system to use files on the disc effectively with 13 new commands.

The Oric printer has also been given a new lease of life and now comes in the Atmos colours, but is otherwise identical to the Oric printer.

The Oric 1 will no longer be manufactured. You can contact Oric at Coworth Park, London Rd, Ascot, Berkshire SL5 7SE Sinclair are at 23 Motcomb St, London SW1 X1B.

Colecovision Extras

CBS have announced some new add-ons for the best selling Colecovision system.

The Atari adaptor box is now on shop shelves after a long delay following court proceedings involving CBS and Atari. The box plugs in the expansion port and has all the switches that the Atari VCS/2600 has such as colour/BW, left and right difficulty, game select, and reset. It also has two slots for Atari joysticks and of course an Atari cartridge slot.

This module turns your Colecovision into an Atari VCS and will run all of the VCS cartridges that are currently in the shops.

Two controllers are due for the release in March. The Super Controller is a device looking like the hilt of a sword with a grip for your hand that has four buttons on it for your fingers, there is a guard that goes over your hand and on top if this is the joystick, a 12 button keypad and a paddle like control knob.

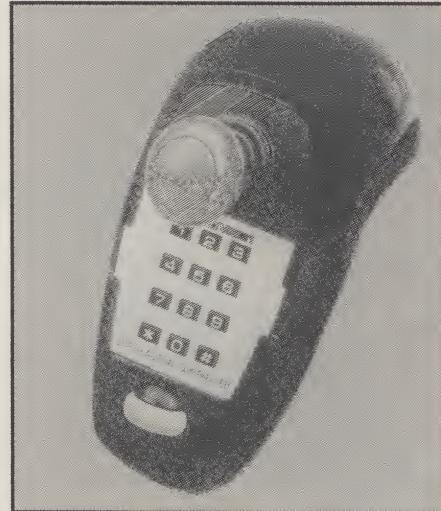

The Roller Controller is a track ball that the standard joysticks plug into. A Roller Controller, or track ball as it is usually called, works by spinning a ball mounted in it in the direction that you wish to go. This technique was first used by Atari in their famous *Missile Command* arcade game.

Both these controllers have special games written for them, also due out in March, they are *Rocky* for the Super Con-

trollers, and for the Roller Controller there is *Victory* and *Slither*.

Rocky, as its title suggests, is a boxing game featuring a very realistic display of the ring with *Rocky* against *Clubber*. *Victory* is a terrain following *Zap* the aliens *Scramble* type of game. *Slither*, however, is a novel game involving you fighting against snakes, *tyrannosaurs*, and *pterodactyls* in a desert.

CBS Electronics are at Headley Rd East, Woodley, Berks.

Penetrating Software

Penetrator, the best selling Melbourne House Spectrum game, is shortly to be released for the Commodore 64.

The idea of the game is to fly across the enemy's territory avoiding the usual hazards of missiles and other nasties. When you have gone through this you need to destroy an illegal cache of neutron bombs.

One feature of *Penetrator* is the ability to edit or re-design the terrain to suit your own needs.

Also out from Melbourne House shortly is the long awaited *H.U.R.G.* which stands for High resolution User friendly Real time Games designer.

As its titles suggests *HURG* is a program that allows you to design your own

machine code games from scratch with no knowledge of machine code.

HURG was due to be released last year but extensive modifications and improvements have been made to the original design and Melbourne House say that it is the most advanced utility program of its kind.

Melbourne House are running a £3,000 competition to coincide with the launch for the best program designed with *HURG*. Details can be obtained from Melbourne House.

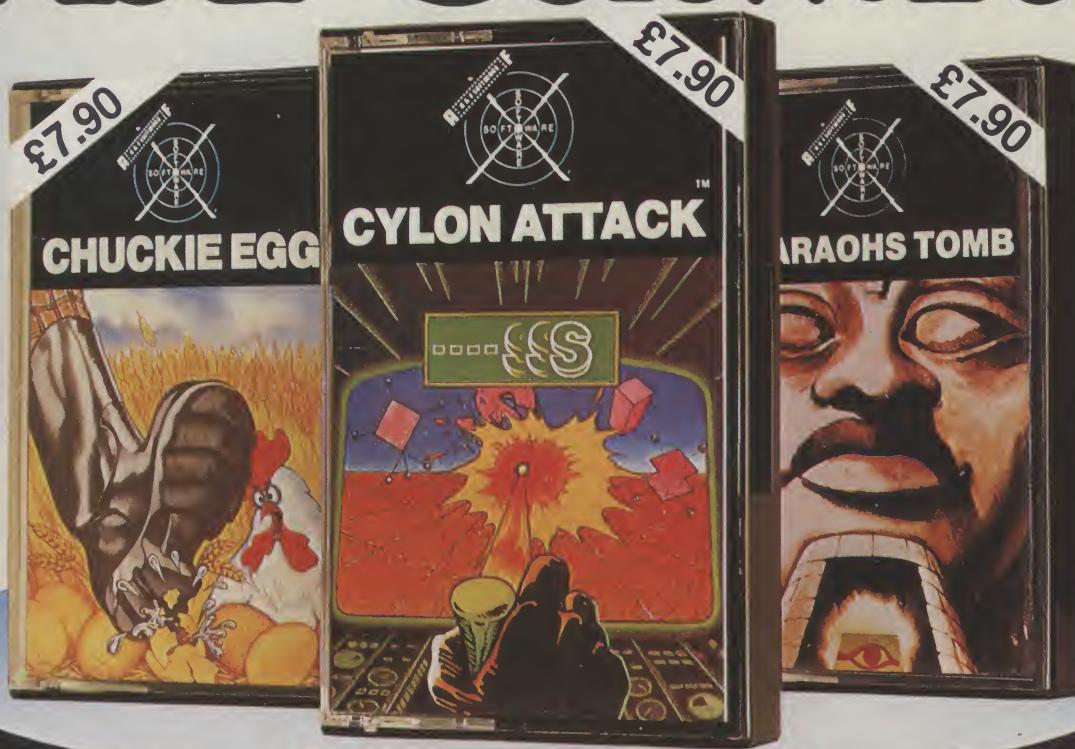

The first copies of *HURG* will be given away in *Games Computing's* prize competition this month, which you'll find elsewhere in this issue.

HURG costs £14.95 and Melbourne House are at Castle Yard House, Castle Yard, Richmond TW10 6TF.

	BBC	ELECTRON	DRAGON	SPECTRUM
CHUCKIE EGG	✓	✓	✓	✓
CYLON ATTACK	✓	✓		
JUNGLE FEVER				✓
PHARAOHS TOMB	✓	✓		✓

Available from W.H. Smiths,  John Menzies and all leading computer stores.

Unit 8, Canalside Industrial Estate,
Woodbine Street East, Rochdale, Lancs.
OL16 5LB. Tel: 0706 341111

Tired of playing endless space games? Well then plant your feet firmly back on the ground again and play this football game. Your team are through to the European Cup. Unfortunately through your negative tactics you always draw 0-0. Which means the tie has to be settled by penalties, the first team to score five goals going through to the next round. (Where doubtless you will draw 0-0 again!)

When playing the game if the attacker on the screen is blue shirted you decide whether to kick the ball Right, Left, or Straight ahead by using the >,< and ? keys respectively. The computer will automatically assume the keepers roll. A word of warning you may out guess the keeper but nerves or just plain lack of skill may mean that you miss kick and the ball will sail wide of the goal!

If the attacker is red shirted you on your keepers cloth cap and decide which way you are going to dive using the >,< and ? keys as before. The computer will not shoot until you have decided which way you are going.

Program Description

Line No. Function

10-40 Introduce the game if its the first round.
50-60 Sets shirt colour for this cycle.
70-500 Displays pitch,goal,crowd,attacker, ball and stationary keeper.

60-680	Waits for you to input shot direction if its your turn. Or randomly works out the shot direction if you are in goal.	PROCPAUSE (L%)	pauses for a set time.
620,680,690	Allows a random miss to occur.	PROCPITCH	draws white lines on pitch.
720-980	Waits for you to input dive direction if you are in goal or works it out randomly if you are attacking.	PROCBALL	moves ball on screen.
990	Counts cycles.	PROCCHECK	checks to see if goal, save or miss has occurred
1000-1090	Checks to see if someone has won if you have to go next round. If computer has game ends.	PROCSCARF	sets up appropriate scarf colour if any of those events has occurred.
PROCKRIGHT	moves the keeper to the right.	PROCMAN	displays scarfs in crowd.
PROCKLEFT	moves the keeper to the left.	PROCBLANK	sets up and displays attacker.
		PROCSCORE	blanks out stationary keeper and replaces him with background of netting.
		PROCTITLE	adds 1 to score if a goal has been scored and displays score at the top of the screen.
			displays instructions and round number.

Variables Used

x%,Y%,Z%,C%,W%,S%,D%,V%,J%,
T & E = tab positions.
0%,P% = graphic co-ordinates of the
ball.
U% = counts number of cycles.
ROUND = round of cup.
K = U% / 2.
L = shirt colour.
p = 1 or 2.
MA = count in repeat loop.
X,Y = tab co-ordinates of center of
goal.
A = input shot direction.
H = input dive direction.
J = random number of calculate
shot direction or miss occur-
ing.

M =

B =

N =

C =

F =

I =

S =

random number to calculate
keepers direction of move-
ment.
computers score.
your score.
dive direction.
shot direction.
save or goal.
input to continue.

SUGGESTED ADDITIONS

With a knowledge of sound it should be
relatively easy to add appropriate noises to
the program such as whistle, crowd rattles
and a tune on completing a round suc-
cessfully. So why not have a go it could
add to the fun. If you do, let me know.

FANTASY SOFTWARE

DOOMSDAY CASTLE

is an arcade style game
with the feel
of a real adventure

Doomsday Castle consists of a labyrinth of 76 complexly inter-connected Halls and Passages where you will meet a whole host of adversaries serving the infinitely evil Scarthax, the Garthogs, the Orphacs, the phenomenally nasty Googly Bird and the Urks which manifest themselves in over fifty unbelievably weird and wonderful guises.

Scarthax has scoured the Universe to bring together the six ancient stones of lifeforce. United in Doomsday Castle they are being used to wield an irresistible power over the cosmos, emanating waves of corruption through every galaxy.

To save the Universe, you must battle your way through the Castle to find and collect the six stones and use their force against Scarthax to destroy Doomsday Castle, hopefully escaping yourself before the final cataclysmic explosion.

The task is not easy (saving the Universe never is!) and it will take you many games to unfold the structure of Doomsday Castle and discover the locations of the ancient stones. The addictive arcade style action will keep you coming back to play but the overall challenge should still keep you occupied for months.

FANTASY SOFTWARE

is available from

W.H.SMITHS, JOHN MENZIES,
LASKYS, GREENS, RUMBELOWS,
SPECTRUM GROUP,
COMPUTERS FOR ALL and all other
good software retailers.

For 48K
Spectrum

You take on the role of our super hero ZIGGY shown here above in his exploratory capsule in combat with an Urk disguised as a pangalactic gargleblaster (!!) This is a true representation of the on-screen graphics.

DOOMSDAY CASTLE

is available at £6.50 from

FANTASY SOFTWARE, FALCONBERG LODGE, 27A ST GEORGES ROAD, CHELTENHAM, GLOS GL50 3DT
despatched by return first class post together with free membership and current newsletter of the Fantasy Micro Club.

Trade Enquiries welcome – telephone 0242-583661.

The Runaway Robot Replies

Dear Games Computing

I had to write and say that I think your magazine is great, it is better than any other magazines that I buy.

I especially like the section on War games for computers, *From Rome to Ram*.

I also must say that your programs actually worked when I type them in. I own a VIC-20 and I think it's good to see that you had as many programs for the VIC as for the Spectrum. Keep it up.

Yours

Barry Mayes

I'm glad to hear that you like *Games Computing* Barry and hope you continue to do so in the future. Our Wargames series is to continue indefinitely, so you have no worries about that coming to an end for the time-being.

Dear Editor

Congratulations for bringing out the best computer magazine in the shops today. I am thoroughly delighted with it and especially like the programs which you print for use on our own computers.

However, after reading the first two issues I was disappointed to see only one program for the CBM 64, seeing as this is one of the most popular computers, along with the Spectrum. So please, more programs for the CBM 64. Also in some of the programs some of the graphics do not come out as clearly as possible, while in others they come out superbly. Finally, I would like to know whether some of the programs suitable for the VIC would run on the CBM 64 without any conversions. If they are suitable would you please say so on page where the program is.

Once again well done (I can't wait for the next issue).

Yours Sincerely
David Buckmaster

I will try to answer your queries one by one. Firstly we can only print what programs are sent in to us, so if there are any budding programmers for the CBM 64, or any other computer, who have written games for their computer why not send them in with some accompanying documentation like the programs in this magazine. We do pay for anything that is published.

Secondly, some listings are clearer than others because some printers are better than others.

Lastly, all VIC programs are compatible with CBM 64 programs as long as you adjust the POKE, PEEK, and PRINT statements accordingly as the VIC has a different size screen layout to the CBM 64 and the control registers for colour and sound are different. We do have a section marked **Conversion Clues** on each program, which should help you overcome these problems.

Dear Sir/Madam

RE: School of Death.

Firstly is this program meant to be copied? If so, there are a great number of lines to lengthy to be put in the Oric 48K. To quote the manual you are not allowed to have lines that are longer than 78 characters. The manual does not explain how to get out of this situation.

As most of the lengthy lines come where the line numbers run consecutively it is a mammoth task to renumber and insert extra lines.

Your comments and advice would be gratefully appreciated by a fed up mum and a confused son.

Yours Sincerely
Mrs J Darke

It can be a bit of a problem with the Oric, as a lot of our longer programs require you to have lines longer than 78 columns. The answer is that you can only type in lines up to 78 characters long, so by replacing "?" for "PRINT" you can save four characters. This shorthand entry of PRINT is the same with all Microsoft BASICs. When the program is listed the "?"s will be reconverted into "PRINT"s and the line will look as if it's longer than 78 characters.

Dear Games Computing

Your second magazine is just as good as the first congratulations and keep up the good work.

Thank you for mentioning the Mattel Intellivision system, so few magazines do since the Colecovision came on the market.

I would like to know why Mattel don't make better use of their machine by using more cartridge power. Mattel cartridges can be up to 64K so games can be equal if not better than those by Colecovision. The most powerful game I have at the moment is a 12K Tron Maze-a-Tron.

I own a Lucky Keyboard that I got from the Silica Shop in Kent. Its language is BASIC, although I don't know of a BASIC that uses commands such as CALL SHOW, CALL GRAB for graphics, or CALL NOTE, and CALL TONE for sound. The booklet supplied is not too explicit and tells you to order a book called *Step By Step Guide To BASIC*. This book is not going to be released in England.

Yours Faithfully
Steven Roberts

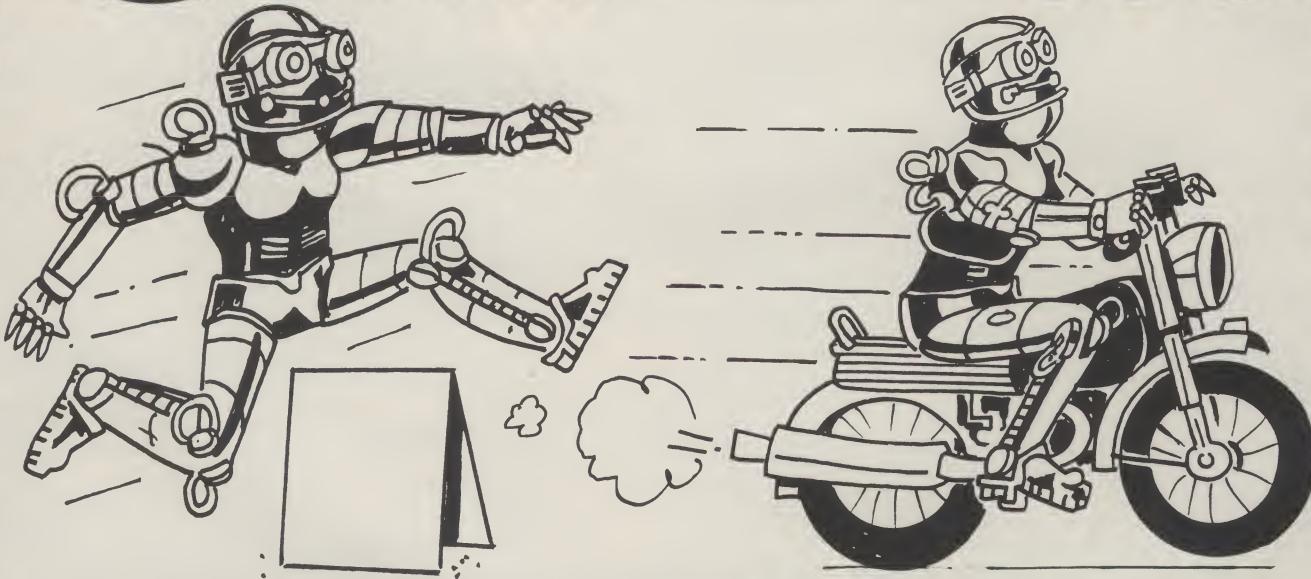

Have you got any opinions to air, has someone somewhere upset you and you want to grizzle and gripe? Or maybe you're full of the joys of spring and feel like telling a happy story?

Whatever you want to say, be it good, bad or indifferent drop us a line here at Games Computing and get it off your shoulders.

Send your letters to:
'Postman Pat', Games Computing, 1 Golden Square, London W1.

GAMES COMPUTING

If you're the type of person who takes their computer and video games seriously you should be reading Games Computing every month.

You'll find a galaxy of games to zap you into the outer realms of space in each issue which you can play on your own computer. And regular program features include exciting adventure games, brain twisting strategy games and super sports games.

PLUS: Software Reviews, the latest news from games makers and players, our special wargames series and fascinating features.

DON'T MISS OUR FREE PULL OUT POSTER PROGRAM IN EACH ISSUE.

COMMODORE 64 • SPECTRUM • BBC • ORIC • DRAGON • TANDY

IF YOU THINK YOU'VE GOT THE BETTER OF YOUR COMPUTER, YOU'D BETTER THINK AGAIN....

We all enjoy a good action game on our home computers, but after a while doesn't chasing the alien across a screen wear a little thin? That's the time to take on the superior challenge of a Warmaster strategy game — plenty of action, plenty to think about, and plenty of titles to suit every taste.

Take on Warmaster and really put your home computer through its paces.

CONFRONTATION

Build-on game that offers a basic format for any modern, non-nuclear conflict. Contains a modern European scenario with facility to create others of your choice using air and land forces. Two-player game.

Spectrum 48K £7.95
BBC-B £7.95

RED BARON

Offers the excitement of arcade action but requires the tactical thought of war games. Pit your biplane against one or two of the Kaiser's aces in this aerial combat game.

Spectrum 48K £5.95

DREADNOUGHTS

Suspense-filled high seas drama as the pride of the German Grand Fleet is locked in battle with the Royal Navy. Two-player game.

Spectrum 48K £5.95

BATTLEZONE 2000

Futuristic wargame. Your tanks, missile launchers, infantry etc. have to destroy an all powerful computer-controlled battle machine. Can you save Planet Earth?

BBC-B £6.95

PARAS

Dramatic all-graphics campaign. Your hand-picked force has dropped behind enemy lines to capture a strategic river crossing. Two versions of the game with ten levels of play.

BBC-B £6.95
Spectrum 48K £5.95
Oric 1 48K (coming soon) £6.95

JOHNNY REB

There's still plenty of fight left in the Confederate South as each side selects forces to manoeuvre on a full-graphics battlefield. Play against the computer or challenge a friend.

Spectrum 48K £5.50
Oric 1 48K £6.95

JUST AROUND THE CORNER, A NEW

BLACK CRYSTAL

The Classic, six program adventure game for the 48K Spectrum and 16K ZX-81 computers. No software collection is complete without it.

"BLACK CRYSTAL is an excellent graphics adventure and a well thought out package" (Sinclair User, April '83).

"BLACK CRYSTAL has impressed me by its sheer quantity and generally high quality of presentation. I am afraid I have become an addict" (Home Computing Weekly, April '83).

SPECTRUM 48K 180K of program in six parts . . . only £7.50
ZX-81 16K over 100K of program in seven parts . . . only £7.50

Why pay more for less of an adventure?

THE ADVENTURES OF ST. BERNARD

An exciting, fast moving, machine code, arcade game where you guide your intrepid St. Bernard through the perils of the icy wastelands to rescue his Mistress from the clutches of the abominable snowman. 48K Spectrum £5.95.

THE CRYPT

written by Stephen Renton

Prepare yourself for the many challenges that shall confront you when you dare to enter "THE CRYPT".

You will battle with giant scorpions, Hell spawn, Craners, Pos-Negs and if you are unlucky enough — the Dark Cyclops in this arcade style adventure.

Available now for the 48K Spectrum @ £4.95

ZX-81 COMPENDIUM

Alien Intruder, Wumpus Adventure, Numerology, Hangman, Hieroglyphics, Movie Mogul.

The ideal software package for all 16K ZX-81 owners. Six major programmes on two cassettes for only £6.50.

"Alien Intruder/Hieroglyphics — Both programs make good use of graphics and words to make a very entertaining package." (Sinclair User, Aug '82)

"Alien/Hieroglyphics/Wumpus/Movie — A varied mix from Carnell, all featuring imaginative responses and graphics and all of them good games for all ages (Hieroglyphics is particularly good for children)." (Popular Computing Weekly, Aug '82)

STARFORCE ONE

Take on the robot guardians of the central computer in a superbly stylised three dimensional battle game. 48K Spectrum £5.95.

(100% MACHINE CODE ARCADE ACTION)

THE DEVIL RIDES IN

I uttered the last incantations as the clock struck thirteen. All fell silent except for a faint rustling in the corner. From out of the shadows they came, all Hell's fury against me but I was not defenceless until the Angel Of Death, astride a winged horse, joined the battle. Avoiding his bolts of hell fire, I took careful aim. My chances were slim, but if my luck held . . . 48K Spectrum £5.95.

(Fast moving, machine code, all action, Arcade game)

THE RANGE FROM CARNELL SOFTWARE

COMING SOON

"THE WRATH OF MAGRA"

The first born has been destroyed. The Black Crystal of Beroth has been banished. The alliance of Evil has been defeated by the armies of Lord Fendal. So ends the Third Age. Now we invite you to write your name in the history of the Fourth Age of the Third Continent.

You will meet friends and enemies, old and new, in the long awaited sequel to Volcanic Dungeon. Using high resolution graphics and combining the best qualities of "Black Crystal" and "Volcanic Dungeon", we will allow you to become part of this tale of revenge.

"The Wrath Of Magra" comes as three, 48K programs on cassette, boxed with instruction manual and book detailing the history of the Third Continent and the many spells you will be using throughout the game.

NOTE: "The Wrath Of Magra" is a complete adventure. You need not buy "Volcanic Dungeon" or "Black Crystal" to play it.

Available through most good computer stores or direct from:
Carnell Software Ltd, North Weylands Industrial Estate, Molesey Road, Hersham, Surrey KT12 3PL.
Dealers: Contact us for your nearest wholesaler.

CARNELL SOFTWARE LTD

The BBC Micro can now give your children a private education.

The BBC Microcomputer now accounts for 80% of the computers being ordered under the current D.O.I. Primary School Scheme.

It's also the computer which a rapidly increasing number of people are choosing for their homes.

One of the reasons for its success is that it makes learning highly entertaining for everybody. From children who are getting to grips with the alphabet, to adults who want a gentle but intensive introduction to the complex world of computing.

Now, there's a substantial new catalogue of educational programs specially for the BBC Microcomputer.

It has been developed by Acornsoft, the software division of Acorn Computers who manufacture the BBC Micro.

Making faces without getting scolded.

With the new Facemaker program, your children can make over a million faces. It's like an identi-kit, allowing them to depict anyone they want. They start by choosing the eyes. Then they can choose the mouth, the ears, the nose, the facial outline and the hairstyle.

And if they really fancy dressing up, they can add earrings and hats.

In doing all this, they learn to read and spell, as well as developing their powers of description.

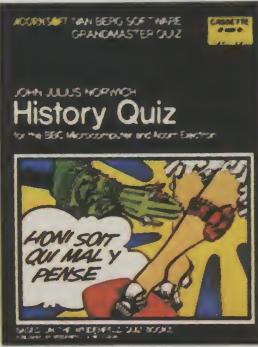

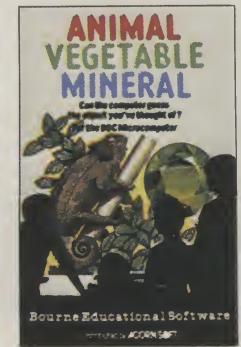

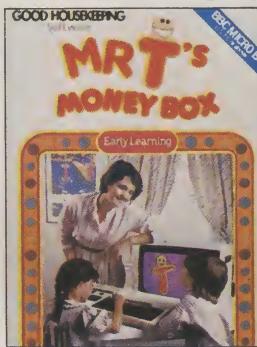

The money program, two games for the price of one.

Mr. T. is an engaging little figment of the microchip who can teach your children all the complexities of our coinage system.

His Money Box program has two games, each of which can be played at different levels.

In Money Match, the challenge is to collect a set of coins, matching them according to shape, size and value.

In Money Box, you can give your child and Mr. T. a helping hand to get all the coins on the screen into the box. (It's always different, because the coins on the screen are based on the small change you have to hand.)

A chance to teach the Micro a thing or two.

With the Animal, Vegetable, Mineral program, the children can get the computer guessing.

They think of an object. The BBC Micro has to decide what it is.

If it doesn't come up with the answer, the children can keep giving it hints.

In doing so, they are encouraged to question the difference between such things as crocodiles and alligators, or whether oil is vegetable or mineral.

The program also encourages them to consult refer-

ence books so that they can ask the computer increasingly tough questions.

Questions on Julius Caesar from J. Julius Norwich.

John Julius Norwich's History Quiz is one of the new BBC Micro Grandmaster quiz series which also covers theatre, crime and detection, music, science fiction and royalty.

On the history front, there are 300 brain-testing questions, covering all aspects of British history from Julius Caesar to Margaret Thatcher.

And to increase the educational value, Mr. Norwich has posed the questions from angles which will give a broader understanding of events.

For the full catalogue, clip the coupon.

There are thirty more new BBC Micro programs in Acornsoft's new catalogue.

For a free copy, complete the coupon, or telephone 0933-79300. Or ask your local BBC Micro dealer.

If you're not yet a BBC Micro owner, you can get full details of the computer at the same time.

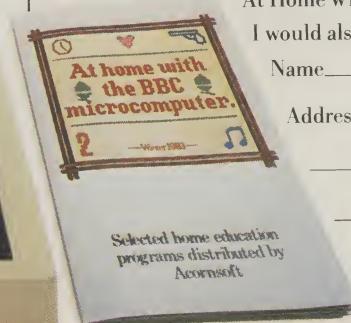

To Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL. Please send me the new Acornsoft catalogue "At Home With The BBC Microcomputer."

I would also like details of the BBC Micro (tick)

FINAL FRONTIER

You have been on a mission taking cargo to Alpha Centuri when you run into an Asteroid Storm. Contained in the asteroid belt are fuel dumps, flags and dockers, left over from other ships. You must dodge your way through the Asteroid Belt collecting the fuel dumps, flags and dockers.

To Play

Use the joystick, right for right, left for left ; down for hyperspace.

You are the yellow ship at the top of the screen. You collect the fuel dumps, flags and dockers by ramming them.

Graphics

Asteroid: a roundish filled-in thing.
Fuel dump: a roundish shape with an "F" in it.
A flag: it looks like a flag.
A docker: it looks like two lots of steps put back to back.

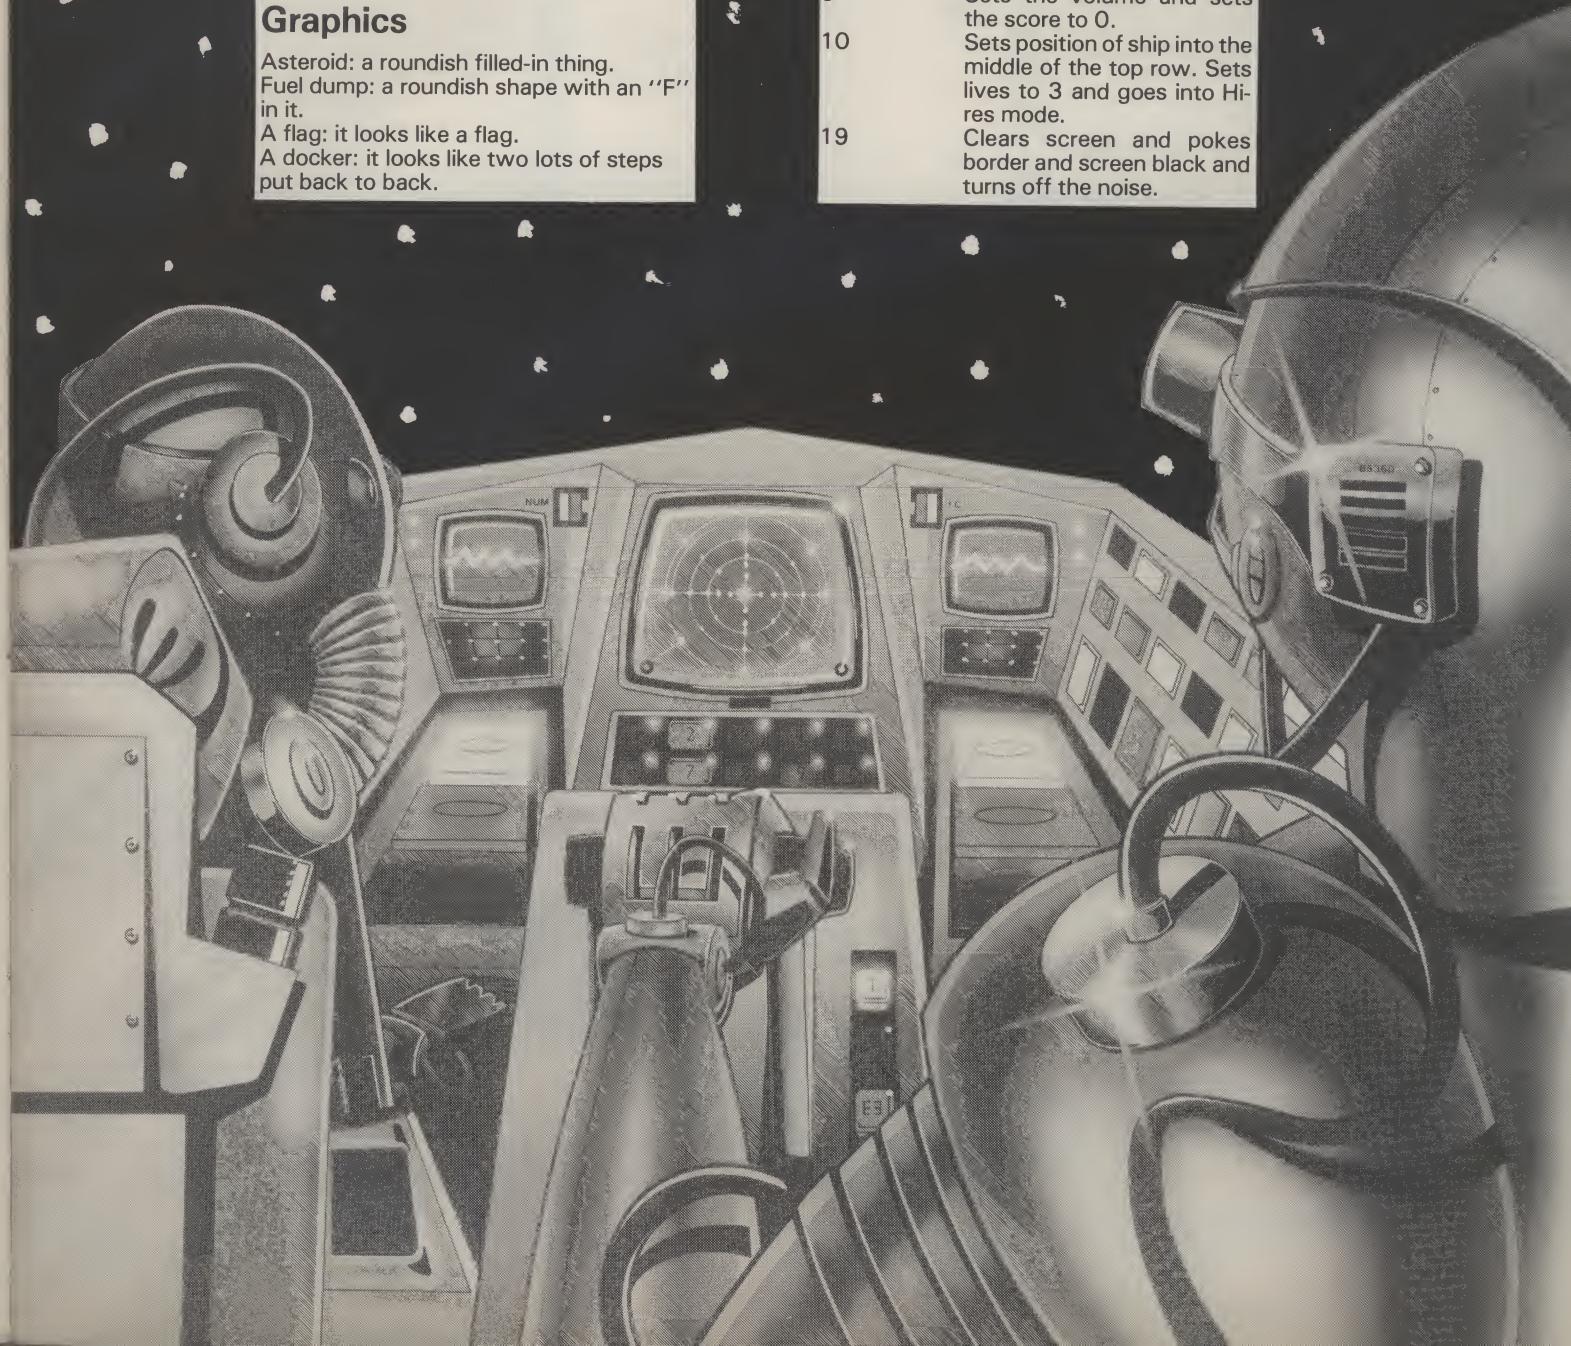

Points

You get a point as the screen scrolls upwards and:

A fuel dump 5 points
A flag 20 points
A docker 50 points

Rundown

1	Sets Hi-Score to 1250 and sets Hi-Scorers' name to * * VIC-20 * * THEN GOSUBS to instructions and the user definable graphics routine.
5	Sets the volume and sets the score to 0.
10	Sets position of ship into the middle of the top row. Sets lives to 3 and goes into Hi-res mode.
19	Clears screen and pokes border and screen black and turns off the noise.

FINAL FRONTIER

20 Pokes up your ship.
 Chooses a random position in the bottom half of the screen and defines it as C.
 Pokes ship to yellow.
 If a random number (0-1) is more than 0.975, then it pokes C as a Flag; then goes to 26.
 If it is more than 0.7 it pokes C as a fuel dump.
 If it is less than 0.05 then it pokes C as a docker.
 Pokes * as a docker.
 Sets joystick variables.
 Moves right.
 Hyper space.
 Moves left.
 Checks if you have crashed; if so, it goes to 500.
 Sees if you have rammed a docker; if so, it increases your score by 50.
 Sees if you have rammed a fuel dump; if so, it increases your score by 5.
 See if you have rammed a Flag; if so, it increases your score by 20.
 Pokes a random note.
 Scrolls screen. Increases score by one then goes to 20 to start loop again.
 Pokes a space in A. Gives a new location. Pokes your space ship there and goes to 20.
 Takes away one of your lives. Sees if you have none left. If you have run out, then it goes to 1000.
 Returns to normal mode.
 Pokes the border green and screen black. Shows score and how many lives you have left.
 Pokes a blowing up noise.

520 Delay loop.
 530 Returns to Hi-res mode and goes to 19 to continue game.
 1000 Returns to normal mode
 Clears screen. Pokes red border and black screen and turns noise off.
 Prints "YOU'RE DEAD".
 Prints your score.
 1010 Delay loop.
 1020 If your score is bigger than the Hi-Score, then your score becomes the Hi-Score and goes to 1050.
 1030 Go to 2000.
 Prints "ENTER YOUR NAME". If you have entered more than eleven characters, including spaces, it asks again.
 1040 Goes to 2000.
 1050 Clears screen.
 1060 2000 2001-2002 Pokes top and bottom lines different coloured blocks.
 The Hi-Scorer's name with his/her score.
 Prints "PRESS FIRE".
 2030 2040 Checks if you have pressed fire; if you have, it goes to 5.
 2050 5000 Goes to 2040.
 Clears screen and pokes border to red and screen to black.
 5001-5002 Does the same as 2001-2002.
 Prints THE.
 5010 5020-5120 Prints "FINAL FRONTIER" in five block high letters, using the VIC's RVS on facilities.
 5125 Goes through all screen and border locations, three times to give flashing effect.
 5130 Goes to 10000.
 5150-5180 Sets up user definable graphics.

5190 Goes into Hi-res mode and returns to start game.
 10000 Clears screen and prints in RVS on INSTRUCTIONS.
 10010 Sets up first part of instructions as A\$.
 10011 Sets F to 36876 (a sound channel) and turns on volume.
 10012 Prints out first part of instructions letter by letter, making machine gun sound.
 10015 Sets second part of instructions as A\$.
 10016 Does the same as 10012 but with second part of instructions.
 Prints: BY DOING THIS it gets the cursor to the beginning of a line.
 10017 Sets final parts of instructions as A\$.
 10020 Does same as 10012 but with final part.
 10026 Delays loop. Goes to 5150.
 10040 Delays loop. Goes to 5150.

Variables

A Your ship.
 C Random position in bottom half of screen for Asteroid, Fuel Dump, Flag or Docker.
 SC Your score.
 LI Lives left.
 HI Hi-Score.
 HIS Hi-Scorer's Name.
 PA, PB, RB, Joystick variables.
 M and N Used in instructions.
 A\$ Used in setting up Hi-res.
 I Used in most for . . . Next loops.
 T

Hints on Play

Go for a docker, if you see one and use hyperspace as much as possible. The game uses up around 2400 bytes.

COMPETITION

There for the taking this month are twenty copies of Melbourne House's HURG program.

HURG stands for High resolution User friendly Realtime Games designer. As its name suggests HURG allows ZX Spectrum users to design and program his or her own high speed machine code games without any knowledge of machine code.

The program is menu driven and allows the user to devise his own game by answering simple questions about the nature of his game. The game can then be saved to tape and reloaded as an independent program using HURG for driver software.

There are three arcade programs included to demonstrate the use of HURG and to give the user insight into the techniques used. You do not simply redefine the graphics on well worn games as with other games designer programs but start from scratch using your own ideas.

HURG was developed by Melbourne House from the development system that they have used to program their best selling games for the Spectrum and other computers.

HURG is not yet on the market so that the lucky winners of our competition will be among the first people to get this amazingly advanced games programming aid.

Melbourne House first started in 1977 as a book publishing company. In 1980, however, Alfred Milgram Managing director of Melbourne House saw the possibilities of computer books and consequently *30 Programs for your ZX80* was published. It became a best selling computer book and Melbourne House have never looked back, producing books on all subjects for a majority of micros on the market.

Early 1982 saw their debut into the software business. Since then Melbourne House have never been out of the software charts with a string of best selling games to their credit, like the Horace series, Terror Daktil, and many others including one of the most advanced adventure games ever written, The Hobbit, which is now available for the BBC Micro, Commodore 64, Oric 1, as well as the original Spectrum version.

Melbourne House will soon extend their range of games to cover the Dragon, VIC-20, and the Electron. The range of books caters for these machines already and covers every aspect of computing.

How to Win Your Designer Program

Printed on this page is a wordsquare and a list of games by Melbourne House. All you have to do is to find the list of words in the square and ring them. The words can go from left, right, up, down, backwards, forwards or diagonally. Where a program name has more than one word the words that make up the program name will be connected but not necessarily in sequence.

When you have found all the letters you will find there are some letters left over. These will make up 10 words and some letters. Put these on the back of the envelope that your entry coupon is in. The words read from left to right and top to bottom. All the words should be ringed on the coupon.

Competition Rules

1. This competition is open to all UK readers of *Games Computing*, except employees of Argus Specialist Publications Ltd, their printers and distributors, employees of Melbourne House or anyone connected with them.
2. As long as the correct coupon is used for each entry there is no limit to the number of entries per person, photocopies will not be accepted.
3. All entries must be postmarked before April 30, 1984.
4. The prizes will be awarded to the first 20 correct entries picked out of the bag.
5. No correspondence will be entered into with regard to the results and it is a condition of entry that the editor's decision is final.
6. The winners will be notified by post and the results will be published in a future issue of *Games Computing*.

FORBIDDEN FOREST

Forbidden Forest is more of a quest than just a game! The action takes place in a four dimensional scrolling forest landscape which many have entered, but none has returned. Yes, I did say FOUR dimensional - day fades into night as the action unfolds! The quest is to seek out and destroy the Demogorgon, mystic ruler of the Forbidden Forest. Before you can even set eyes on him you will have to contend with his army of fearsome creatures, including mutant spiders, showers of giant frogs, snakes, dragons, skeleton soldiers and more! You have only your trusty bow and arrows to depend on!

*

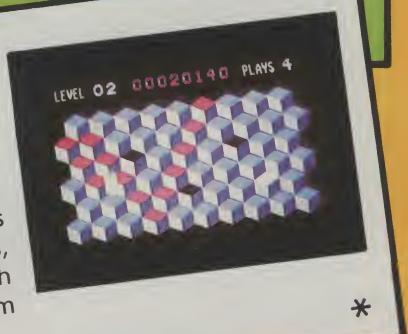

AZTEC CHALLENGE

A challenge on an epic scale! Aztec Challenge takes you on a journey to Mexico and the ancient pyramid of Tenochtitlan. The ancient Aztec gods and their devotees have ensured that no ordinary human can learn the secrets of the temple and live to tell the tale. The pyramid is protected by all manner of treacherous traps and hidden perils - an epic test of your courage and cunning. Aztec Challenge features no less than seven totally different screens - here are just three of them - each of which presents a brand new challenge. We hope your joystick can stand up to it!

*

SLINKY

Slinky, the spring, was having fun hopping about when suddenly he came upon a pile of coloured blocks, so he thought he'd play around on them for a while. Much to his amazement he found that they changed colour when he landed on them. Wow! But unknown to him, the blocks belonged to the Wicked Wizard, who sent his friends along to tease our poor hero. Slinky is a real fun package with ninety-nine levels, amazing reward displays, and action replays. Where else could you meet such charming characters as Dusty the dust cloud, Marge the magnet, Ralph the random raindrop, and Lorenzo the chameleon hopper?

FRANTIC FREDDIE

Frantic Freddie is fun all the way! Played to an unbelievable soundtrack of brilliantly arranged tunes, Frantic Freddie contains all the ingredients that make a game into a classic! Freddie is a telephone line engineer who has to climb up and down the telegraph poles, picking up pots of gold and avoiding the dreaded Greebles. The Greebles take on a different form with every new screen, but one thing's for sure - they may look cute, but they show no mercy! Frantic Freddie also features wacky messages, funny interludes and silly bonuses. Frantic Freddie - a game with a sense of humour!

PEGASIS

Pegasis takes us back to the mythical age when the battle between Good and Evil was fought by heroes on winged steeds. As the champion of the forces of Good, you must topple the evil Black Warriors from their jet black flying horses by swooping down on them from above, then land and finish them off before they can remount. In order to keep airborne, you must keep your wings flapping with the joystick Fire button, and control direction with the stick. The brilliant programming of Pegasis gives you stunning graphics, bonus creatures, great wing flapping sound effects, an incredible simulation of flying horse aerodynamics, plus - two players can play at the same time!

Betch'a can't play just one . . .

Flying Feathers

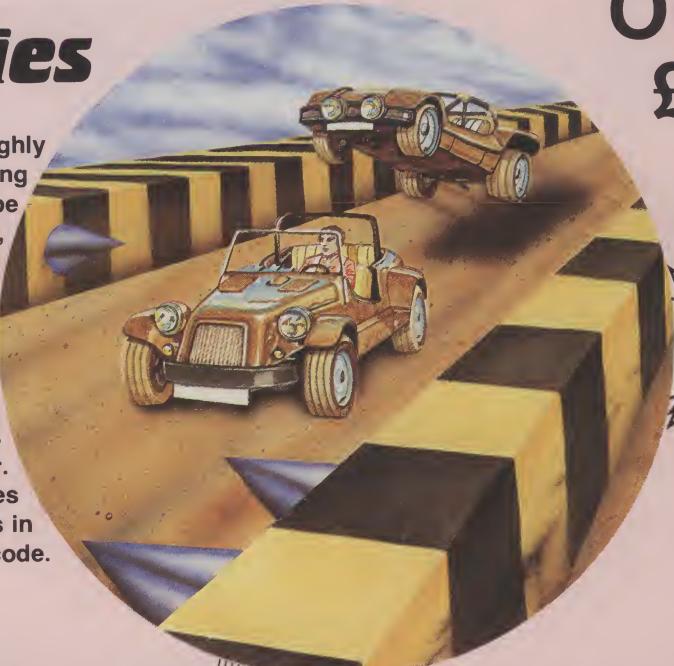

In this highly original game you are the gamekeeper on the lake trying to stop greedy eagles taking all the fish. Two different methods with 4 skill levels each are available for your shot gun. Specially scored music with freeze frame ability, and for the technically minded 10 sprites (yes, that's right, there are only 8 on the 64). High scores kept. All machine code.

Bumping Buggies

Thrills and spills is what you'll get in this highly addictive motor racing game. You'll be driving over some pretty hazardous terrain having to cope with lakes, islands, rock formations and, not least, other cars which are intent on making you crash. Luckily you can vary your speed and line and you have one ace up your sleeve – when you maintain a sufficient speed you can jump over obstacles to help you out of trouble. The track gets progressively more difficult with 20 different patterns and you have to cope with driving conditions in the four seasons of the year.

Like most bubble bus classics, Bumping Buggies has its own specially scored music and is in machine code.

SOFTWARE

ROAD RUNNER

Runs on: BBC B
Made by: Superior Software
Price: £7.95

As with all Superior Software programs there is no explanation of the nature of the game. Knowing nothing about Road Runner I was a little apprehensive. I need not have worried as the game is brilliant.

You control a red racing car and must drive around a maze. Of course you have a task. You must drive over 10 checkpoint flags before you are given a renewed maze. There are two kinds of obstacle. Firstly three green racing cars which are hell bent on your destruction which they achieve by colliding — with you! Secondly boulders which fortunately remain stationary.

Your defence against the green cars is either out-maneuvering or emitting smoke which sends them into an uncontrollable spin. The only defence against the boulders is one of non-contact!

The graphics are superb — they are both colourful and smooth, and the sound is fairly good. One feature that I liked was the short rag-time burst of music at the start of each game. The control keys are easily mastered and there is a joystick option. All in all, the game is of a very high standard and represents very good value for money.

STEEPLE JACK

Runs on: Atari + Joystick
Made by: English Software
Price: £9.95

The first thing you notice is the front cover is a screen shot not a misleading artist's impression.

You are supposed to be a boy (name of Jack) having a dream about climbing a chimney, by using the joystick and fire button, to climb ladders on a never-ending chimney which has random gaps. These gaps must be avoided or you fall off.

Easy? Well yes, but there are other hazards, pac-man like ghosts and multi-coloured falling elephants whose resemblance is more like that of a single bed.

The general response of the joystick is good, once you get into the fast flow of the game. Skill levels are 0-4 inclusive. The superb sound effects that are available on the Atari, have not been used to full effect. The scrolling effect of the graphics on the chimney and ladders are smooth and consistent I especially liked that animated face

of Jack, with flashing eyes and darting tongue (but why just a head).

My overall opinion is good, but not to the usual standards of English Software, it soon became boring and the poor sounds were annoying.

There was a bug on the first loading which no matter how many times I tried I could not repeat, it was that by holding the joystick fully left and pressing start, Jack jumped off the ladder but did not fall. There by avoiding all hazards.

This did give a chance to let the game run on and seemed to reach a maximum speed but the format never changed in the 3000 metres that I sat through.

Not a game I would recommend.

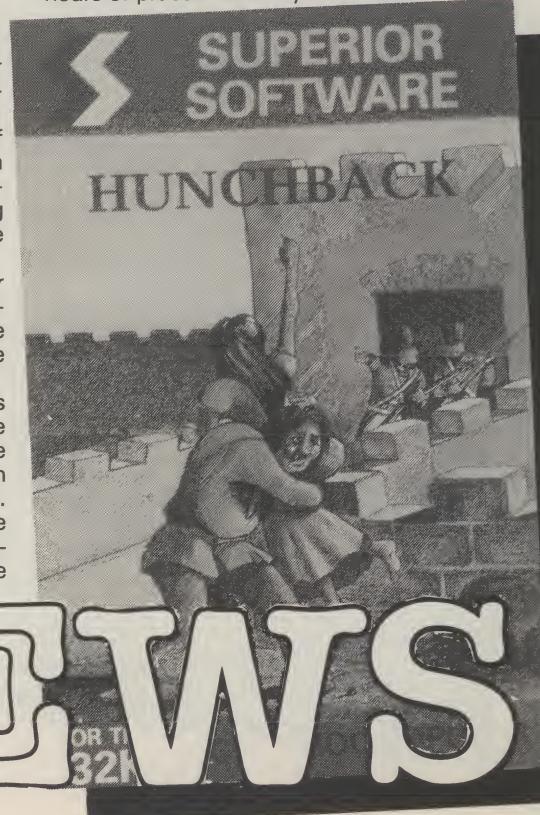

HUNCHBACK

Runs on: BBC B
Made by: Superior Software
Price: £7.95

Having heard a lot about the game I was eager to get started. When I first tried it I was amazed how difficult it was. The idea is that you, Hunchy, run along the battlements of a castle and attempt to rescue Esmerelda. The obstacles, — but of course, include cannon balls, arrows and anti-social guards.

The keys are simple to learn: left, right and jump, and there is a joystick option which would improve the game. The graphics are excellent, especially the way Hunchy jumps and the guards raise and lower their deadly spears. Sound is not very well used, but is adequate.

I think the game is very testing addition to the most complete collection and is well worth the money, once you have a few hours of practice under your belt.

REVIEWS

SOFTWARE

CRAZY PAINTER

Runs on: BBC B
Made by: Superior Software
Price: £7.95

This is a game whose type has a proven pedigree involving the painting in of boxes on a grid whilst running the gauntlet. In this one the gauntlet can be anything from spear carrying natives to cannibalistic teddy bears.

Deviations in this version include making the assassins jump then running past them and role playing on the part of the painter from a normal paint roller to an abnormal gorilla. Points are awarded for consuming articles along the way and I assume for completing all four sides of a box on later screens. I have to assume because I could not stay alive long enough to discover what I was supposed to do on these later screens and the instructions gave little help.

With joystick or keyboard use, good quality graphics and with perseverance this game may well grow on you but on me I'm afraid it died.

I find difficulty in loading Superior Software — despite four different recorders the loading of this and others tend to make them adventure games before I begin.

FAIRGROUND

Runs on: BBC B
Made by: Superior Software
Price: £7.95

I found this to be a well thought out game of its type. The scenario is a rifle range with a wide variety of objects passing in front of your gun and barely sufficient ammunition with which to hit them. Extra bullets can be earned by shooting the appropriately numbered boxes as they appear.

Bonus points are earned for shooting groups of letters in sequence within a time limit in addition to normal hits. Interest in the game is furthered by the inclusion of the infamous 'Smiley' who traverses the rear shelves only to periodically descend and steal bullets if not shot.

A second screen shows a man attempting to reach the side boundaries, when shot he runs the other way until shot again, continuing until his speed defeats and you return to the fair.

Strangely addictive with good sound effects and graphics and with easy key operation this game should keep a room in silence — providing the option of removing the background music is exercised with the first bullet. Incorporating a 'hold' facility and a hall of fame this game grows on you.

SKRAMBLE

Runs on: VIC-20 + 16K Joystick
Made by: Anirog
Price: £7.95

An expanded screen with double height characters making up a colourful title page showing all the aliens and fuel dumps. The game is very playable and makes good use of multicolour graphics, although this makes the display a little chunky. The game is the best replica of the arcade game that I have ever seen. There are six sectors through which you have to guide your rocket ship without the chance to turn around or back out of your mission.

The sectors include rocket attack, cavern, fire balls, city, maze, and finally the nerve centre of the defence that you have to destroy before you run out of fuel. Joystick only, on cassette, and needs 16K expansion.

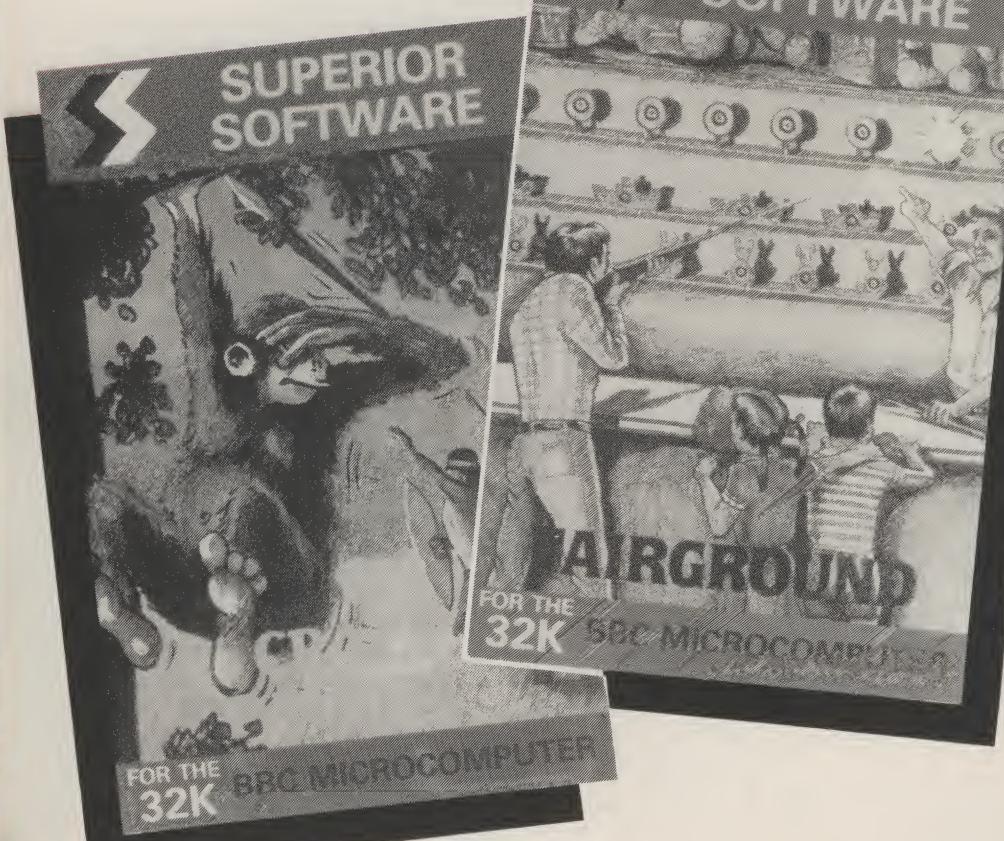

The logo for Anirog Software, featuring the word 'ANIROG' in a bold, blocky font with a jagged, pixelated texture.A black and white photograph of the 'Skramble' software box. The box art features a rocket ship launching from a platform with a city skyline in the background. The title 'SKRAMBLE' is prominently displayed at the bottom.

PACMANIA

Runs on: VIC-20 + 3K
Made by: Mr Chip Software
Price: £5.50

No prizes for guessing what game this is like. Well, why buy this one when there are plenty of others on the market?

The answer is simple: it has twelve levels to suit everyone from the complete beginner to the experienced player. The fact that you cannot use a joystick is cancelled out by a nice little feature that allows you to choose your own key combination.

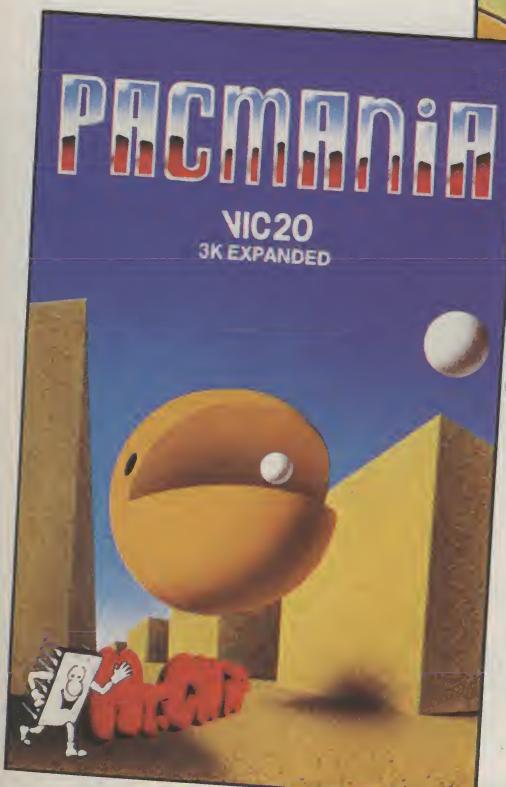

It has a difficulty level, speed variation and maze size all of three different ranges, visible or invisible maze walls and a choice of still or moving power pills.

The game itself is good with the ghosts becoming more intelligent the higher up the difficulty and speed levels you go. The maze is very good with dead ends and no warp tunnels. The walls themselves are very thin tubes which give a very clear display.

At the end of the games there is a ten place Hall of Fame which includes the choices of difficulty, speed etc which you made at the beginning.

I had no trouble with loading, so the only fault I can find is that when you are playing, the score is not particularly clear. The game is reasonably priced at £5.50 and all in all is probably the best "Pacman" style game for the VIC.

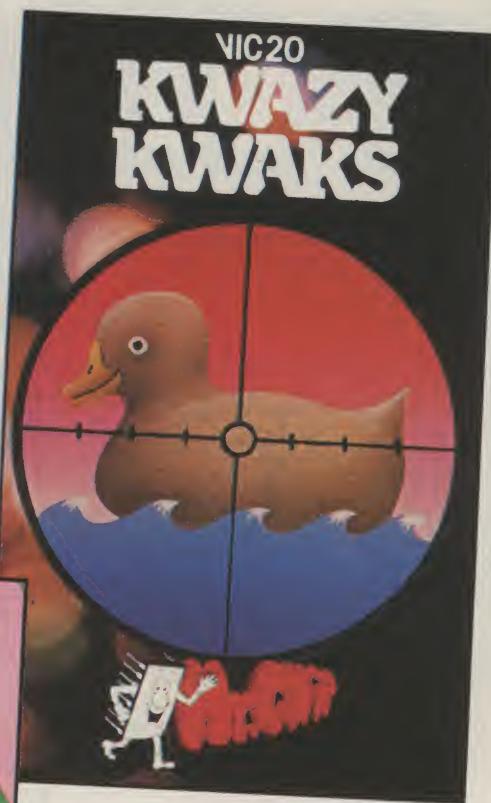

BITMANIA

Runs on: Commodore 64
Made by: Virgin Games
Price: £6.95

When the 64 was new and software was scarce this game might have been welcomed. Time has however moved on and we have come to expect programs that use the excellent sound and graphic facilities of the machine to the full. This offering fails to make the grade.

The scenario has you trapped inside the memory of the 64 where you must evade or destroy the constant stream of bits hurled at you by the CPU. The bits are simply a

variety of user defined characters with little original or exciting while sprite graphics are used only to provide a moving background. Little use is made either of the sound facilities and indeed perhaps the most impressive part of the program is the use of graphics and music on the title pages.

Altogether we really have a right to expect better and with better available this program is unlikely to find a place in many collections.

KWAZY KWAKS

Runs on: VIC-20
Made by: Mr Chip Software
Price: £5.50

Krazy Kwaks is a brilliant replica of the arcade game 'Carnival'. Another great game by S Southern of Mr Chip.

Shoot the ducks and rabbits to gain points, and numbers to gain bullets. But watch out for those low flying ducks who eat up your bullets, the faster you shoot the targets with fewer bullets the more points that you get.

The concise instructions make this game easy to follow. This game is easy to use on joystick as well as keyboard control, with left, right, and fire movements. The characters on screen are double height, the screen is expanded and hi-resolution. The graphics are easy to follow, so the screen is uncluttered and readable.

The carnival music can be turned off by pressing the shift-lock key which is useful if you get annoyed with it.

A certain must for all VIC owners.

REVIEWS

SOFTWARE

NOC A BLOC

Runs on: BBC B
Made by: Virgin Games
Price: £7.95

Whilst not being totally alone in nature this game offers features which make its playing enjoyable if not compelling.

The program loads well and opens with sensibly laid out and uncomplicated instructions; these include the offer of joystick option which I preferred. Within the playing area are found blocks around which you, as a red bird, are pursued by aliens called 'spods'. The blocks when pushed by you either move or crumble, when moved any unfortunate spot in their way is crushed.

Spods can be temporarily immobilised following their contact with the outer boundaries after suitable energising by you, they can then be trampled on and eliminated. Bonuses are awarded throughout the multi-screen format of the game for time lapsed and for the lining up of suitably marked blocks in a manner prescribed.

Given the confines of my progression I did not find later screens relatively more difficult neither could I rate the graphics more than above average in quality.

Although only 'high score' was illustrated the aim of the game being to kill spods and accrue points still had me reincarnating and coming back for more.

CHESS

Runs on: BBC B
Made by: Computer Concepts
Price: £8.95

Computer Concept's latest version of their chess program would satisfy both novice and master alike.

The instruction booklet provided gives thorough but concise explanation to the superb flexibility and detail offered. Not only is it possible to select board and piece colour, level of play, and duration you can even consult the computer as to the wisest move you can make yet force it to think again over a move that it may wish to make. An action replay of the game can be summoned or you can retrogress move by move thereby enabling complete analysis of your situation; this is still furthered by the Save to tape or disc facility upon completion.

From the high resolution graphics through the total control of skill and level to the technicalities of en passant and castling this programme is complete.

It is advertised as being 'quite simply the best chess game available' — I for one wouldn't doubt it.

WIDOWS REVENGE

Runs on: Commodore 64
Made by: Bubble Bus
Price: £6.99

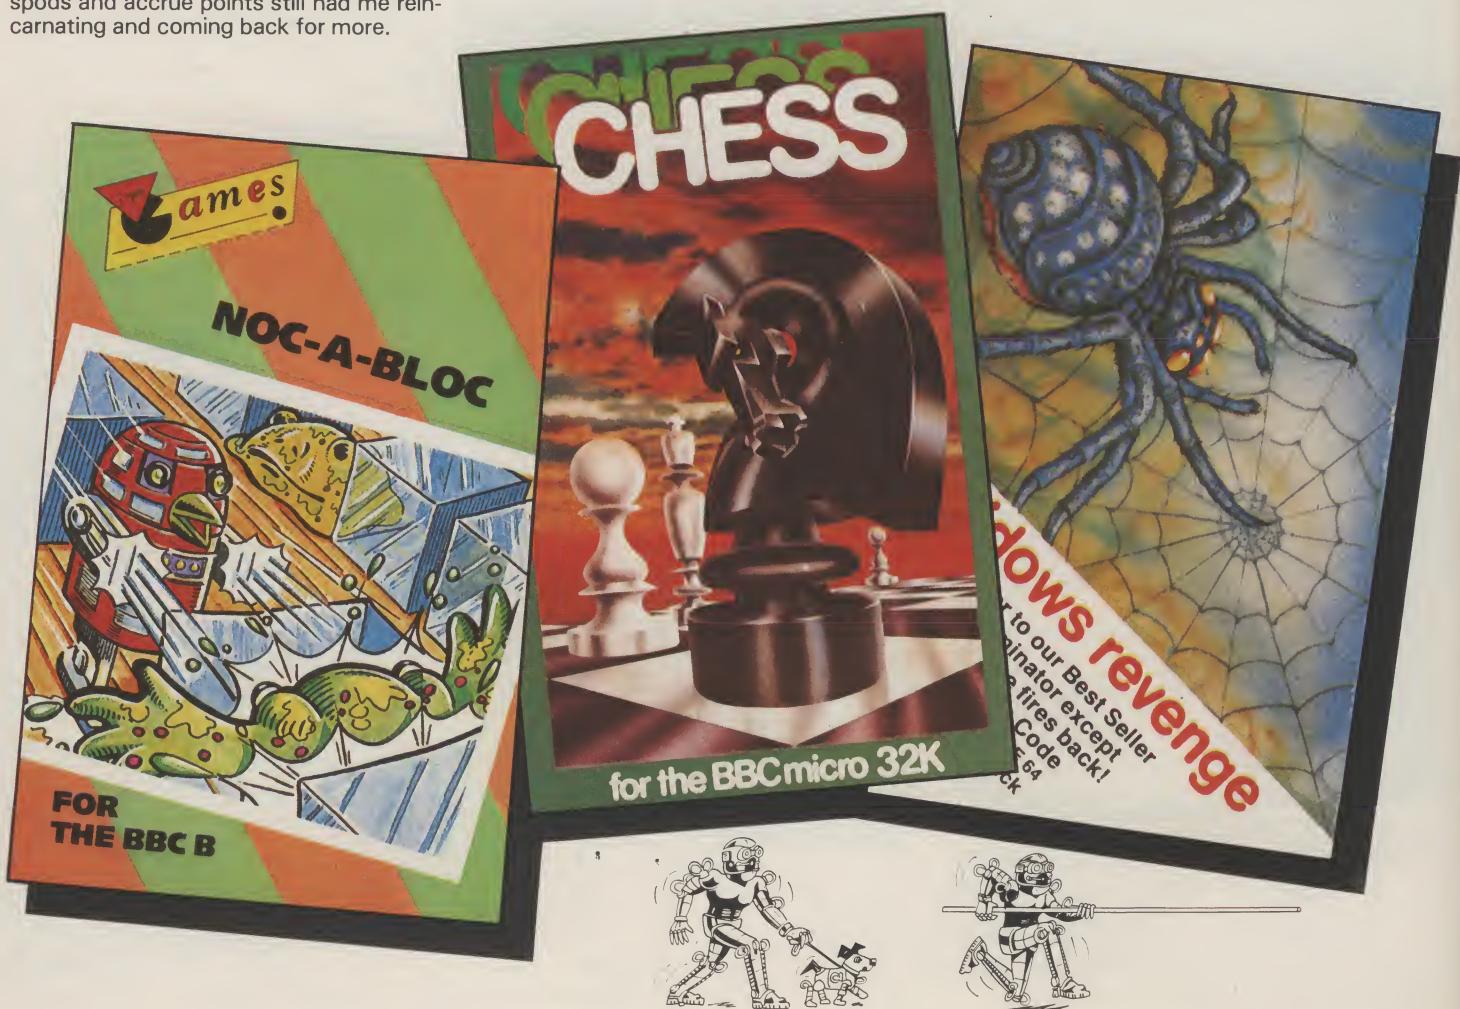

Billed as the sequel to Exterminator from the same company, this is a further variation of the Centipede theme.

The main difference on this occasion is that the warrior ants, which appear to have ousted the centipedes, can actually shoot back. Pest control definitely becomes a more dangerous task.

All the same this lacks some of the refinements of the original. The graphics are slightly cruder in design and the motion is less smooth. There is a two player option but there is no pause facility and no keyboard alternative to the joystick although as the joystick is used in part 1, the control, back arrow, 1, 2 and fire keys will operate albeit awkwardly.

Sound too is less impressive so that the option of turning it off would have been welcome but this too has disappeared in the changeover from Exterminator.

All in all this program suffers from the Rocky, Jaws and Superman syndrome — sequels do not always stand comparison with the original. Still I suppose it's only fair that the insect life of the garden should have a chance to strike back!

REVENGE OF THE MUTANT CAMELS

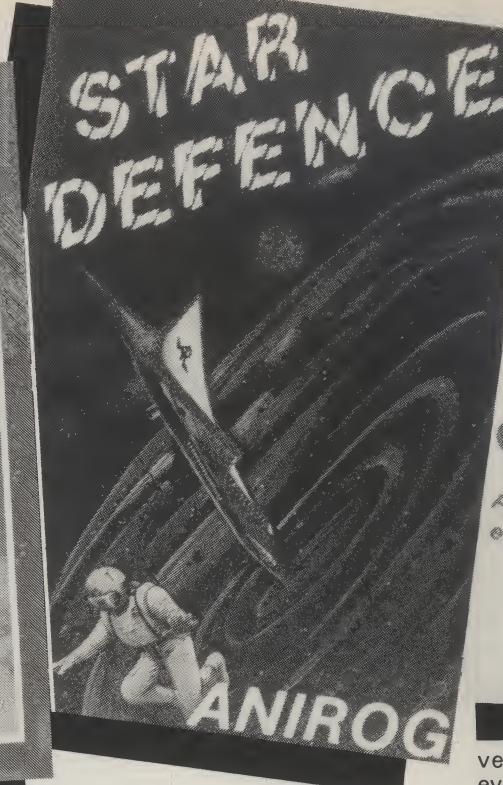

REVENGE OF THE MUTANT CAMELS

Runs on: Commodore 64
Made by: Llamasoft
Price: £7.50

Life for anyone writing commercial programs for the Commodore 64 used to be fairly easy. The vast majority of stuff being poorly put together sprite and sound programs or simple re-writes of VIC or PET stuff, with a few exceptional programs such as Virgin's Falcon Patrol standing out from the crowd or being exorbitantly expensive American software.

Now at last some British software is becoming available to show that the 64 is a wonderful machine. Perhaps the best program around is Revenge of the Mutant Camels by Jeff Minter. I was never a great fan of Attack of the Mutant Camels but this program is vastly superior. A friend described it as a cross between Manic Miner and Planetoids, however it has much more in common with the former than the latter.

You control a Star Wars AT-AT like camel capable of jumping great heights and telephone boxes, spitting laser bolts, and being protected by a neutronium shield. A thread of wry wit runs through the topics for the 42 sheets. From the obvious to the subtle, careful with that Eugene, no doubt a side swipe at Eugene Evans of Imagine, portrayed as he is in Manic Miner as well as being the name of the Pink Floyd track. Some of the sheets are very funny. Inkey, Blinkey, and Thud! has you battling against ghosts and pacmen.

Manic Minter has you avoiding dozens of camels being shepherded by Minter himself. Telecoms cumupance has you doing battle with telephones, telephone boxes, and 10 pence pieces, all of which are very nasty to touch.

The program is something of a soapbox for Minter. It starts with extensive and very funny credits of everyone including his dog and plays a great tune. The game shows that camels and llamas are 'lovely', you should be especially careful of all British Telecom property, and that "no cruise is good news" a CND vein that runs through a lot of the screens.

Llamasoft claim that it should take about three months of practice to get through all 42 screens, after which it just gets harder.

The program is recorded on both sides of the tape, once in normal format and once in TURBO format. This allows the 40K program to load in 1 1/2 minutes instead of the 18 it takes normally. I tried this with the old style C2N and a variety of adaptors which allow "normal" cassette recorders with the 64 and found the TURBO unreliable. However on the new style C2N it worked perfectly and the slow copy was usually all right with everything else. At £7.50 it is exceptionally cheap and I cannot think of anything I would recommend more wholeheartedly to a 64 owner. Buy it and prepare to stand by your beast.

STAR DEFENCE

Runs on: VIC-20 + 16K + Joystick
Made by: Anirog
Price: £7.95

A colourful title page exposing aliens, such as mutants and space ships. A fairly good copy of the arcade game 'Defender' with a few extras thrown in. You have the con-

exterminator

Machine Code
Fast action game - shoot
everything that moves
COMMODORE 64

ventional 'smart' bomb to destroy everything on the screen, and hyperspace to transport you to another quadrant. The extras include a star gate to transport you to where a lander has just abducted a humanoid. Inviso gives you five seconds of invisibility and immortality for each life.

If you have four rescued humanoids under your ship you can fly into the star gate and be transported over three attack waves. You can play with one to four players and there are two speed levels. The game can be paused and restarted at any time. Joystick only, needs 16K expansion, cassette.

EXTERMINATOR

Runs on: Commodore 64
Made by: Bubble Bus
Price: £6.99

This is yet another variation on the Centipede theme but to be fair it is probably one of the better versions with some novel features.

Much of its interest lies in the good use of the graphics and sound. There is a well drawn eagle with a fascinating wing motion and a cry which sounds more like a seagull than a bird of prey. There's also a spider realistic enough to send a few shivers down sensitive spines.

Play can be controlled from the keyboard but a joystick is definitely preferable. Up to nine players can be selected using the numeric keys and other useful features are a pause key and the ability to turn the sound off if it should get a bit wearing.

Easy to start with, the level of difficulty soon builds up though further scoring possibilities are added by the appearance of a scorpion which scuttles menacingly across the screen.

Just enough then to lift it above the competition and make it a worthwhile buy.

REVIEWS

SOFTWARE

EXPLORING ADVENTURES ON THE VIC

Made by: Duckworth
Runs on: VIC 20 + 16K and 32K
Expansion
Price: £6.95

Three Adventures on one tape are included in this exciting package from Duckworth. For the first two, 16K RAM is required, and for the final adventure, 32K.

Castlemaze Adventure has you exploring an old castle, with rooms, corridors, mazes, black knights, spiders, pirates, and sourcerers.

Tunnel Adventure places you deep underground in magical caves filled with poisonous snakes and fierce animals.

Underground Adventure traps you inside a vast cavern searching for the key to release you. The format of these three games is standard, with first a description of your location being displayed. This is followed by a list of items visible and a list of exits.

Move around these mind-mazes by typing in two-word commands. There is no guarantee that your intentions will be understood, but the computer has been programmed with a fairly wide vocabulary. You may pick up and carry various items that you find, to use later during the game.

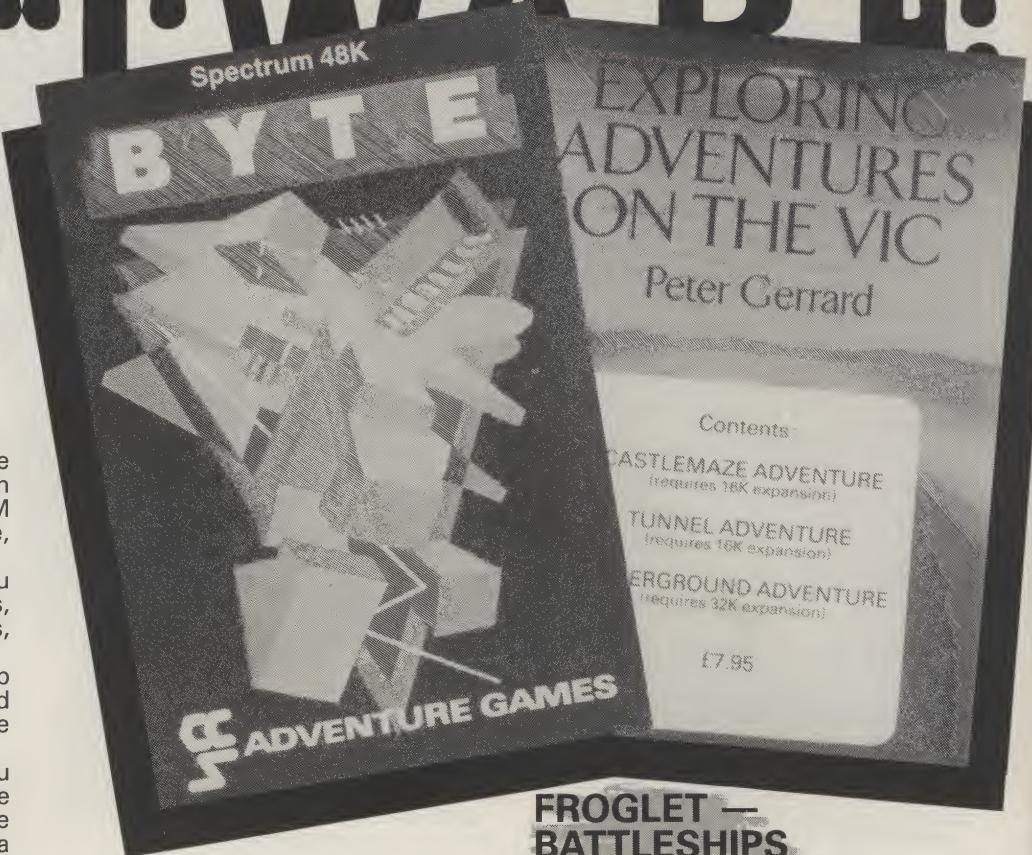

All three adventures are well written and challenging, with, as is customary in Adventures, the Help routine being sufficiently cryptic not to make the game too easy (What DID Hansel and Gretel do?).

Time unfortunately, has not yet permitted me to solve the Adventures, so if you find difficulty in completing them, a book by Peter Gerrard (the author of the programs) is available from Duckworth at £6.95 listing the three programs, together with tips on how to write your own Adventures.

BYTE

Made by: Cases Computer Simulations
Runs on: 48K Spectrum
Price: £5.00

Much of the commercial software available loads a screen file before the main file to give the user something

pretty to look at while cursing himself for choosing such a slow cassette based system and wondering if he can afford the micro-drive next month. So, why does Byte load the picture as the very last file after waiting five minutes faced with a blank screen?

After you select one of the seven skill levels you are offered the opportunity to purchase a computer system. Being a faithful Spectrum user I chose the Sinclair machine and proceeded to spend the rest of my allotted cash on various peripherals. The section of the game is very tedious and poorly error trapped. The computer goes on to draw a picture of a grave stone with the caption 'just kidding'. All very nice, but when you have to wait a minute it is a bit pointless.

The game entails exploring the system (memories of TRON?) and buying various bits and pieces. These include teletext modules and estimating circuits. Each keystroke is followed by about seven seconds of noise (the inlay says music), making entry extremely tedious. You are also treated to such insults as 'you moron'.

The whole game involves moving up, down, left, right, forward, and backward — does this really justify the 'true 3D adventure' boast? There are monsters to do battle with and other tasks. The game is written in BASIC and is consequently very slow and it jumped my system more than once.

FROGLET — BATTLESHIPS

Made by: Timeless Software
Runs on: TI 99/4A with Extended Basic
Price: £4.95

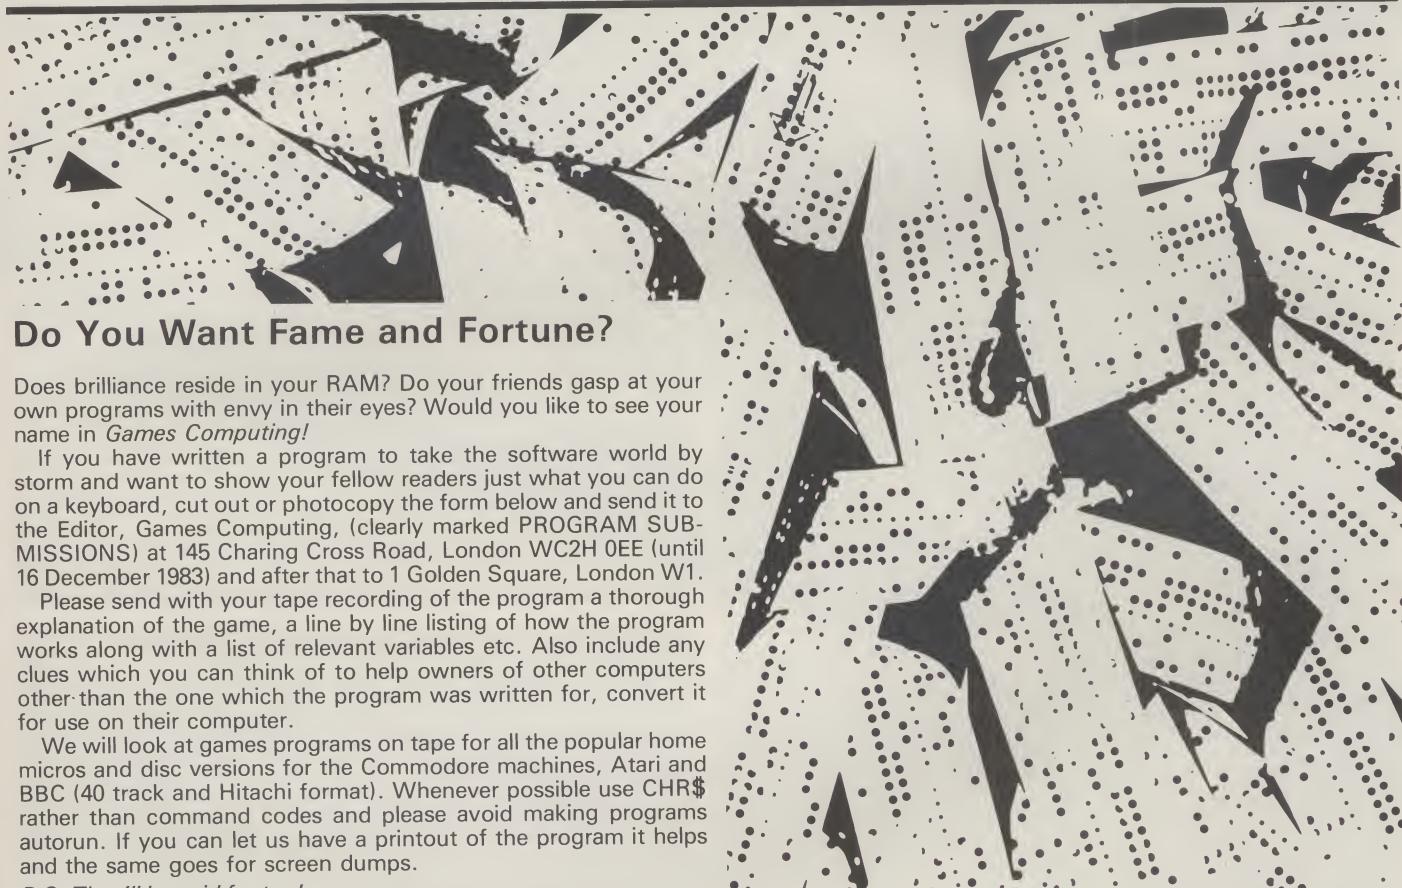

This tape contains two programs — Froglet, a version of Frogger, and that well known favourite, Battleships.

In Froglet, using either keyboard or joystick, you must race against time to safely cross road and river to each of your four frog homes and so obtain a high score. You have traffic to avoid, of course, and the river must be jumped across using the floating logs, lily pads and turtles. When near to a home an unfriendly occupant may appear, in which case a safer place to land must be found. You have three lives in every game, but as each screen is completed the next becomes more difficult.

In Battleships one player competes against the computer, the winner being the first to locate and destroy the other's fleet. There is a choice of three skill levels, each of which controls how intelligently the computer's guesses are made. The screen displays two 10×10 grids — one to record your guesses, the other to show the deployment of your fleet and each guess made by the computer. The only instructions provided are those on screen. Unfortunately, they appear so fleetingly that about three RUNs are necessary to read them all properly.

REVIEWS

PROGRAM SUBMISSIONS

Do You Want Fame and Fortune?

Does brilliance reside in your RAM? Do your friends gasp at your own programs with envy in their eyes? Would you like to see your name in *Games Computing*?

If you have written a program to take the software world by storm and want to show your fellow readers just what you can do on a keyboard, cut out or photocopy the form below and send it to the Editor, *Games Computing*, (clearly marked PROGRAM SUBMISSIONS) at 145 Charing Cross Road, London WC2H 0EE (until 16 December 1983) and after that to 1 Golden Square, London W1.

Please send with your tape recording of the program a thorough explanation of the game, a line by line listing of how the program works along with a list of relevant variables etc. Also include any clues which you can think of to help owners of other computers other than the one which the program was written for, convert it for use on their computer.

We will look at games programs on tape for all the popular home micros and disc versions for the Commodore machines, Atari and BBC (40 track and Hitachi format). Whenever possible use CHR\$ rather than command codes and please avoid making programs autorun. If you can let us have a printout of the program it helps and the same goes for screen dumps.

P.S. They'll be paid for too!

COMPETITION

COLLECT A COLECOVISION CONSOLE IN A GREAT GAMES COMPUTING
NAME THE FRAME COMPETITION!

One of the hottest games systems now on the market is being *given away* by its maker CBS in a quick and easy competition requiring just a little games know-how.

The ColecoVision system is a relative newcomer to the video games scene but since it was launched last year both the system and its games cartridges have gained a very strong and dedicated following.

What seems to be the system's strengths are its great graphics which closely rival those achieved by Atari, the market leader in this field, and CBS's policy of only producing games for the system which are bone fide versions of arcade games under licence. To do this they always buy the rights of the original arcade that they want to reproduce. Of course, this is the correct way to go about software reproduction and means that games players will ultimately have much better games to play.

Loads of Software

So far CBS produce Atari compatible cartridges (only released at the end of 1983) or great games like *Carnival*, *Donkey Kong*, *Gorf*, *Mouse Trap*, *Venture*, and *Smurf* with the very popular *Zaxxon* game soon to be available for the machine too. These are just some of the 26 games currently available for the ColecoVision itself.

Versions are also on sale to run on the Mattel Intellivision system including *Donkey Kong* (and *Donkey Kong Junior*), *Carnival*, *Mouse Trap*, and *Adventure*.

The very latest release for the ColecoVision is a version of *Time Pilot* which all at CBS are 'very excited' about. With a bit of luck this brand new game should hit shop shelves during January.

Plenty Of Prizes

Not only has CBS ColecoVision kindly agreed to give away a ColecoVision, also up for grabs is the newly launched Atari adaptor. This great little device will enable you to use Atari compatible cartridges with your ColecoVision console. Just imagine

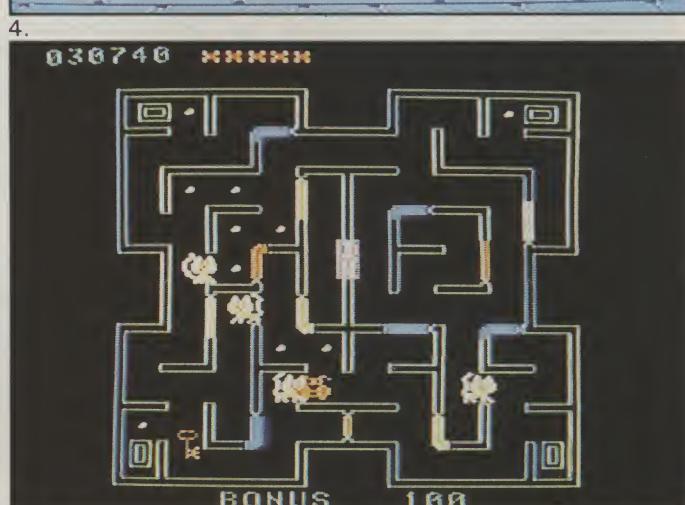

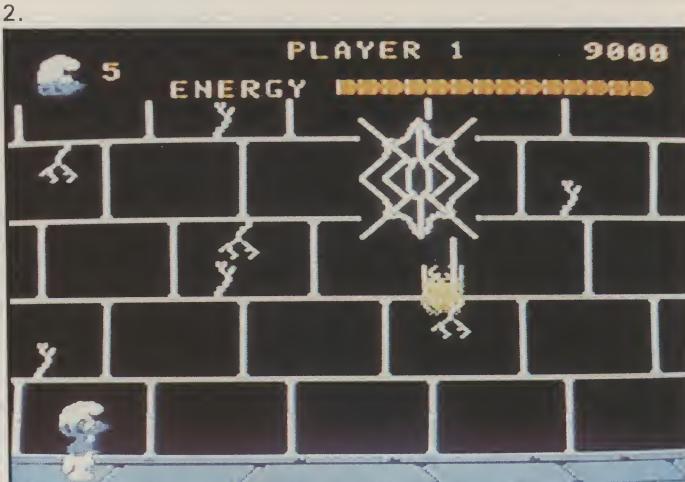

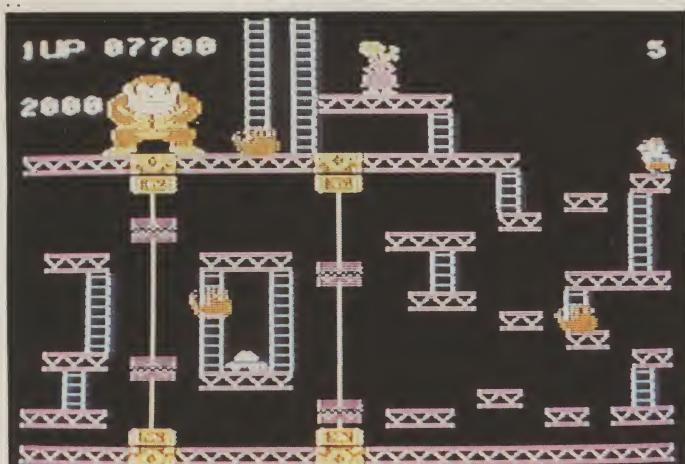

what a boost that will be to your games library! In addition to all the games specifically for the ColecoVision you'll also have all the great arcade games which Atari has brought out over the years. And on top of all that is an extra prize consisting of a range of Atari games cartridges from ColecoVision for you to use with the complete system.

How To Collect Your ColecoVision

You'll see printed on this page pictures of frames from best selling ColecoVision games. All you have to do is put on your thinking cap and name the game frames. Study the picture carefully and see if you can recognise the characters in the screen shot. It's not too difficult because the pictures are in colour so everything should be easy to distinguish.

Don't be alarmed if you think you can only name the game if you already have a ColecoVision system. You can't. All you must do is use your imagination and find out about the games from catalogues, advertisements or look in your local video games store and see if they have got any ColecoVision games in stock. But make sure you don't keep pestering them with constant requests to see what ColecoVision stuff they have in stock. We wouldn't want to upset them after all.

So, now you know what to do it's all down to you. Remember to read the competition rules very carefully too before sending in your entry. If it is not properly addressed it may not reach us and you wouldn't want to jeopardise your chance of winning this competition, would you?

Competition Rules

1. This competition is open to all UK readers of *Games Computing*, except

employees of Argus Specialist Publications Ltd, their printers and distributors, employees of CBS Colevision or anyone connected with them.

2. As long as the correct coupon is used for each entry there is no limit to the number of entries per person, photocopies will not be accepted.

3. All entries must be postmarked before April 30, 1984.

4. The prizes will be awarded to the first correct entry picked out of the bag.

5. No correspondence will be entered into with regard to the competition results and it is a condition of entry that the editor's decision is final.

6. The winner's name will be published in a future issue of *Games Computing* and he/she will be notified by post.

Send your entries to **Games Computing/Colecovision Competition** with this coupon. Please write in block capitals.

SOFTWARE FOR SPECTRUM AND ZX81

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate, cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match"

£5.00

Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball"

£5.00

Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort, etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator"

£12.00

Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1". Business Applications

£7.00

Ready-made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2". Home Computing

£7.00

Ready-made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview"

£5.00

Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual 'slide-show' mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw"

£5.00

Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send s.a.e. for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE" Forerunner of "Day of the Match" £4.00

"TEST-MATCH" Forerunner of "Ball by Ball" £4.00

"VIDEO-PLAN" Forerunner of "Superplan" £7.00

"VIDEO-AD" Forerunner of "Superview" £7.00

"VIDEO-SKETCH" Forerunner of "Superdraw" £7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf, immediate delivery basis. Prices include VAT, post and packing in U.K. Add a bit for postage if you live in Outer Mongolia. (Note: "Day of the Match" not available until late October 1983).

L

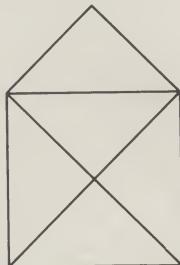

E

S

For no reason that is very convincing, this month's puzzles have squares as a common theme. This is reflected in the shape of the puzzles or their titles, where shapeless.

1 SQUARE DANCE

An easy one to start with — can you draw this without lifting pen from paper or travelling the same line twice?

2 BOX NUMBERS

Apologies if this is a little too much like homework, but given that each letter of the alphabet represents a different number between 0-9

$$\text{and that } \frac{\text{A C E D}}{\text{B D}} = \frac{\text{A I A C}}{\text{D C}}$$

$$\text{A B}^3 = \text{D G C B}$$

$$\text{C J H B} = \text{F G J} \times \text{J F}$$

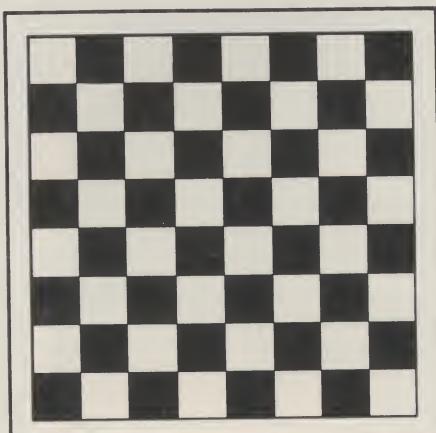

in the following grid

A	C	E	D
I		F	G
A	B		C
C	J	H	B

then what is $\text{B J} \times \text{F G}$?

3 ALL SQUARE

This game gives every appearance of being simple too — all you have to do is place eight pieces on the chessboard so that no two pieces are in a straight line — horizontally, vertically or diagonally.

ANSWERS ON p96

SPECIAL SQUARE COMPETITION

4 MAGIC SQUARE

Since squares are this month's theme, we must include a magic square — simply a square filled with rows of numbers that add up the same — across, down or diagonally. A true magic square will use all different numbers — hence

2	7	6
9	5	1
4	3	8

Can you devise a magic square for a four sided square using 1-16?

Now that is easy enough — you either spend ten minutes working it out — or look it up in a book. What we would really like to see is *your* computer program, devised to solve the above problem. We will publish the most elegant or simplest program in a future issue, and use this (hopefully) as the basis for more magic square problems in the future. So get to work — and send them in!

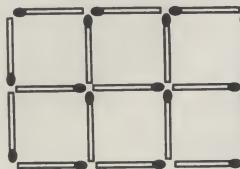

5 SQUARE PEGS

Talking of squares, here's an old chestnut you might have forgotten. Join the nine points with four straight lines that pass through each point just once, each starting where the other left off.

6 SQUARE RIGGED

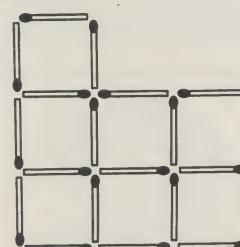

Some matchstick teasers:
Take away five matches to leave three squares and no odd matches

Add five matches to make ten

Take away three matches and replace them to make five equal squares.

By the way, breaking or burning matches is cheating!

P

S

7 SQUARE MEALS

Lord Gilberdyke once committed a heinous crime at the Court of Falkovia — sleeping through all fifteen verses of the Falkovian National Anthem. His punishment was severe — banishment to the nearby island of Donrovia with all his household for five months.

Arriving there they found the punishment even more harsh — for the island was inhabited by cannibals, and it was their custom to devour *two* people every full moon.

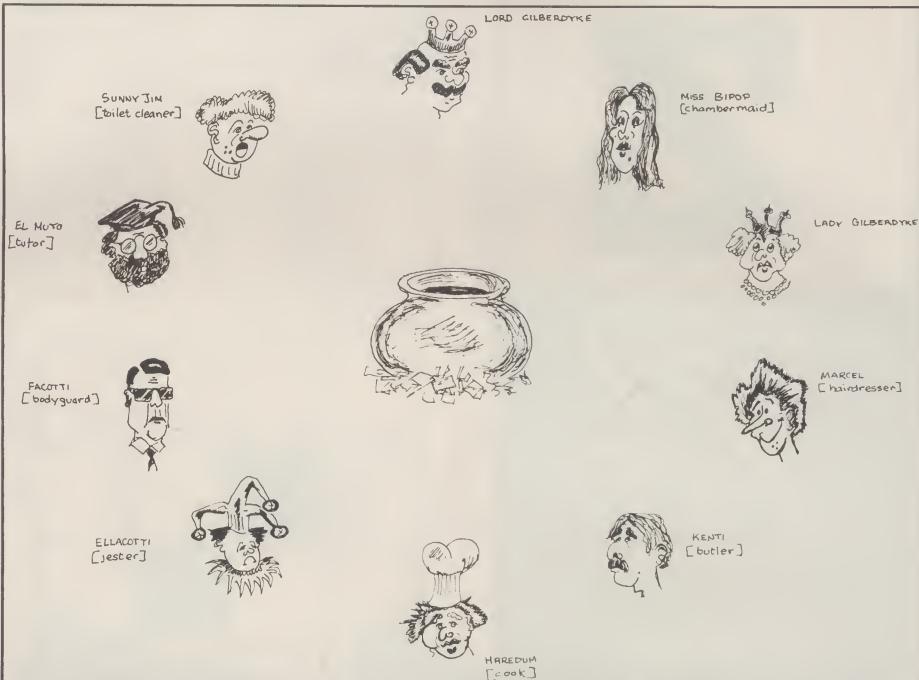

As the exiled party numbered Lord Gilberdyke, his wife and eight retainers, and the moon was waning, it was clear that only two would survive the exile.

The wily Lord Gilberdyke thought quickly and then summoned his household together. "I intend to be entirely democratic in this matter," he lied; "we shall all stand an equal chance of appearing on the menu."

"Each month we shall form a circle, standing in the same positions each time. I shall pick a man at random and start counting clockwise to 13. The unlucky number 13 will take his place in the pot, and I shall start again from the one next to him, again counting to 13. The following months I shall always start from the one after the thirteenth man — or woman."

Now it was his plan to solve all his family problems this way — to be rid of a meddlesome wife and expensive retinue — all except for Miss Bipop, the chambermaid, who happened to be young and reasonably attractive.

At full moon the next month the circle formed according to Lord G's instructions. But in the ensuing time he had forgotten exactly where to start counting, and found himself being dressed for dinner — as the first course. He had made a slight error. Where did he start counting — and where should he have? This is how he set out the circle . . .

Answers for March

REVENGE

OF THE MUTANT CAMELS

At last the long awaited sequel to Attack of the Mutant Camels is available. You are controlling a ninety foot high, neutronium shielded, lazer spitting death camel; leading a rebellion against your evil Zzyxian overlords. The game features beautiful smooth scrolling graphics and no less than 42 different attack waves, more than any game in video history. The challenge of play will last for months as you battle to see what's on the next wave.

64™

A truly remarkable depiction of life cycles in a freshwater environment. A semi-educational programme with high resolution graphics, crammed with thrills, spills and excitement, featuring:

Amoeba (Rhizopoda); **Hydra** (Chlorohydra Viridissima); **Dragonfly** (Erythromma Najus); **Bloodworm** (Phylum Platyheminthes); **Jellyfish** (Craspedacusta Sowerbeii); **Beetle Larva** (Macroplea Leachi); **Spider** (Argyronata Aquatica); **Water Fleas** (Scapholeberis Mucronata); **Bumble-Bee** (Bombus Lapidarius); and our special guest star

THE COMMON FROG
(Rana Temporaria)

Awesome . . . in its conception
Brilliant . . . in its depiction
Dynamic . . . in its execution

"Savage Pond is a real joy. A totally unique concept, well thought out and superbly programmed. Whilst a far cry from the usual arcade action it retains all of the excitement. It is an ideal family game and children and adults alike will marvel at the graphics and storyline . . . you will not find such an original and compelling game anywhere else. Buy it and sit back knowing that one of the most original games ever programmed was written here in Britain." — PAGE 6 — an Atari Users Magazine.

Bomber Run

If you have played Lunar Lander and you have played City Bomber, then you will love our Lunar Bomber program for the Dragon 32 or 64 with joysticks.

When the program is typed in and RUN you will see your ship in the top left hand corner. It then starts to move across the screen from left to right. You have four bombs at your disposal to clear a space for your ship to land, the bombs are released by pressing the fire button. When all four bombs have been used you are given a chance to land. Pressing the fire button will start your descent and the right joystick will control the ship.

If you manage to land a tune is played, the time it took you to land is displayed and the game restarts. If you crash, however, there is a random chance of escaping alive and restarting the game.

As a bonus there is an overshoot facility, pressing the fire button while descending will cause your ship to rise.

RUNdown

Line	Action
10-100	Credits and instructions.
110-140	Set up arrays, initialize variables and branch to set up screen routine.
150-200	Main program.
210-250	Bomb routine, check if bombs are used up, move bomb and start explosion.
260-320	Landing routine, read joystick, check for safe or crash landing and check for overshoot.
330-380	Safe landing routine, print messages, play tune.
390-410	Crash routine, play tune, decide whether or not to start game again.
420-540	Set up screen, draw ship and bomb and store them into arrays SH and BM, draw random landscape, plots stars at random and draw planet in the distance.

Main Variables Used

X	X coordinate of ship/bomb.
Y	Y coordinate of ship/bomb.
U	Number of bombs used.
S	Time gone by in seconds.
BT	Best time.

Conversion Clues

This program should not be hard to convert as Dragon BASIC is fairly standard. Read through the notes on hot it works to get an idea of what is going on and insert the appropriate graphics commands where needed as these are the only major difference from standard Microsoft BASIC. Here are a few points.

GET Copies an area of the screen and stores it into a previously dimensioned array for later use.

PUT Is the command which puts the arrays contents back onto the screen at the coordinates given.

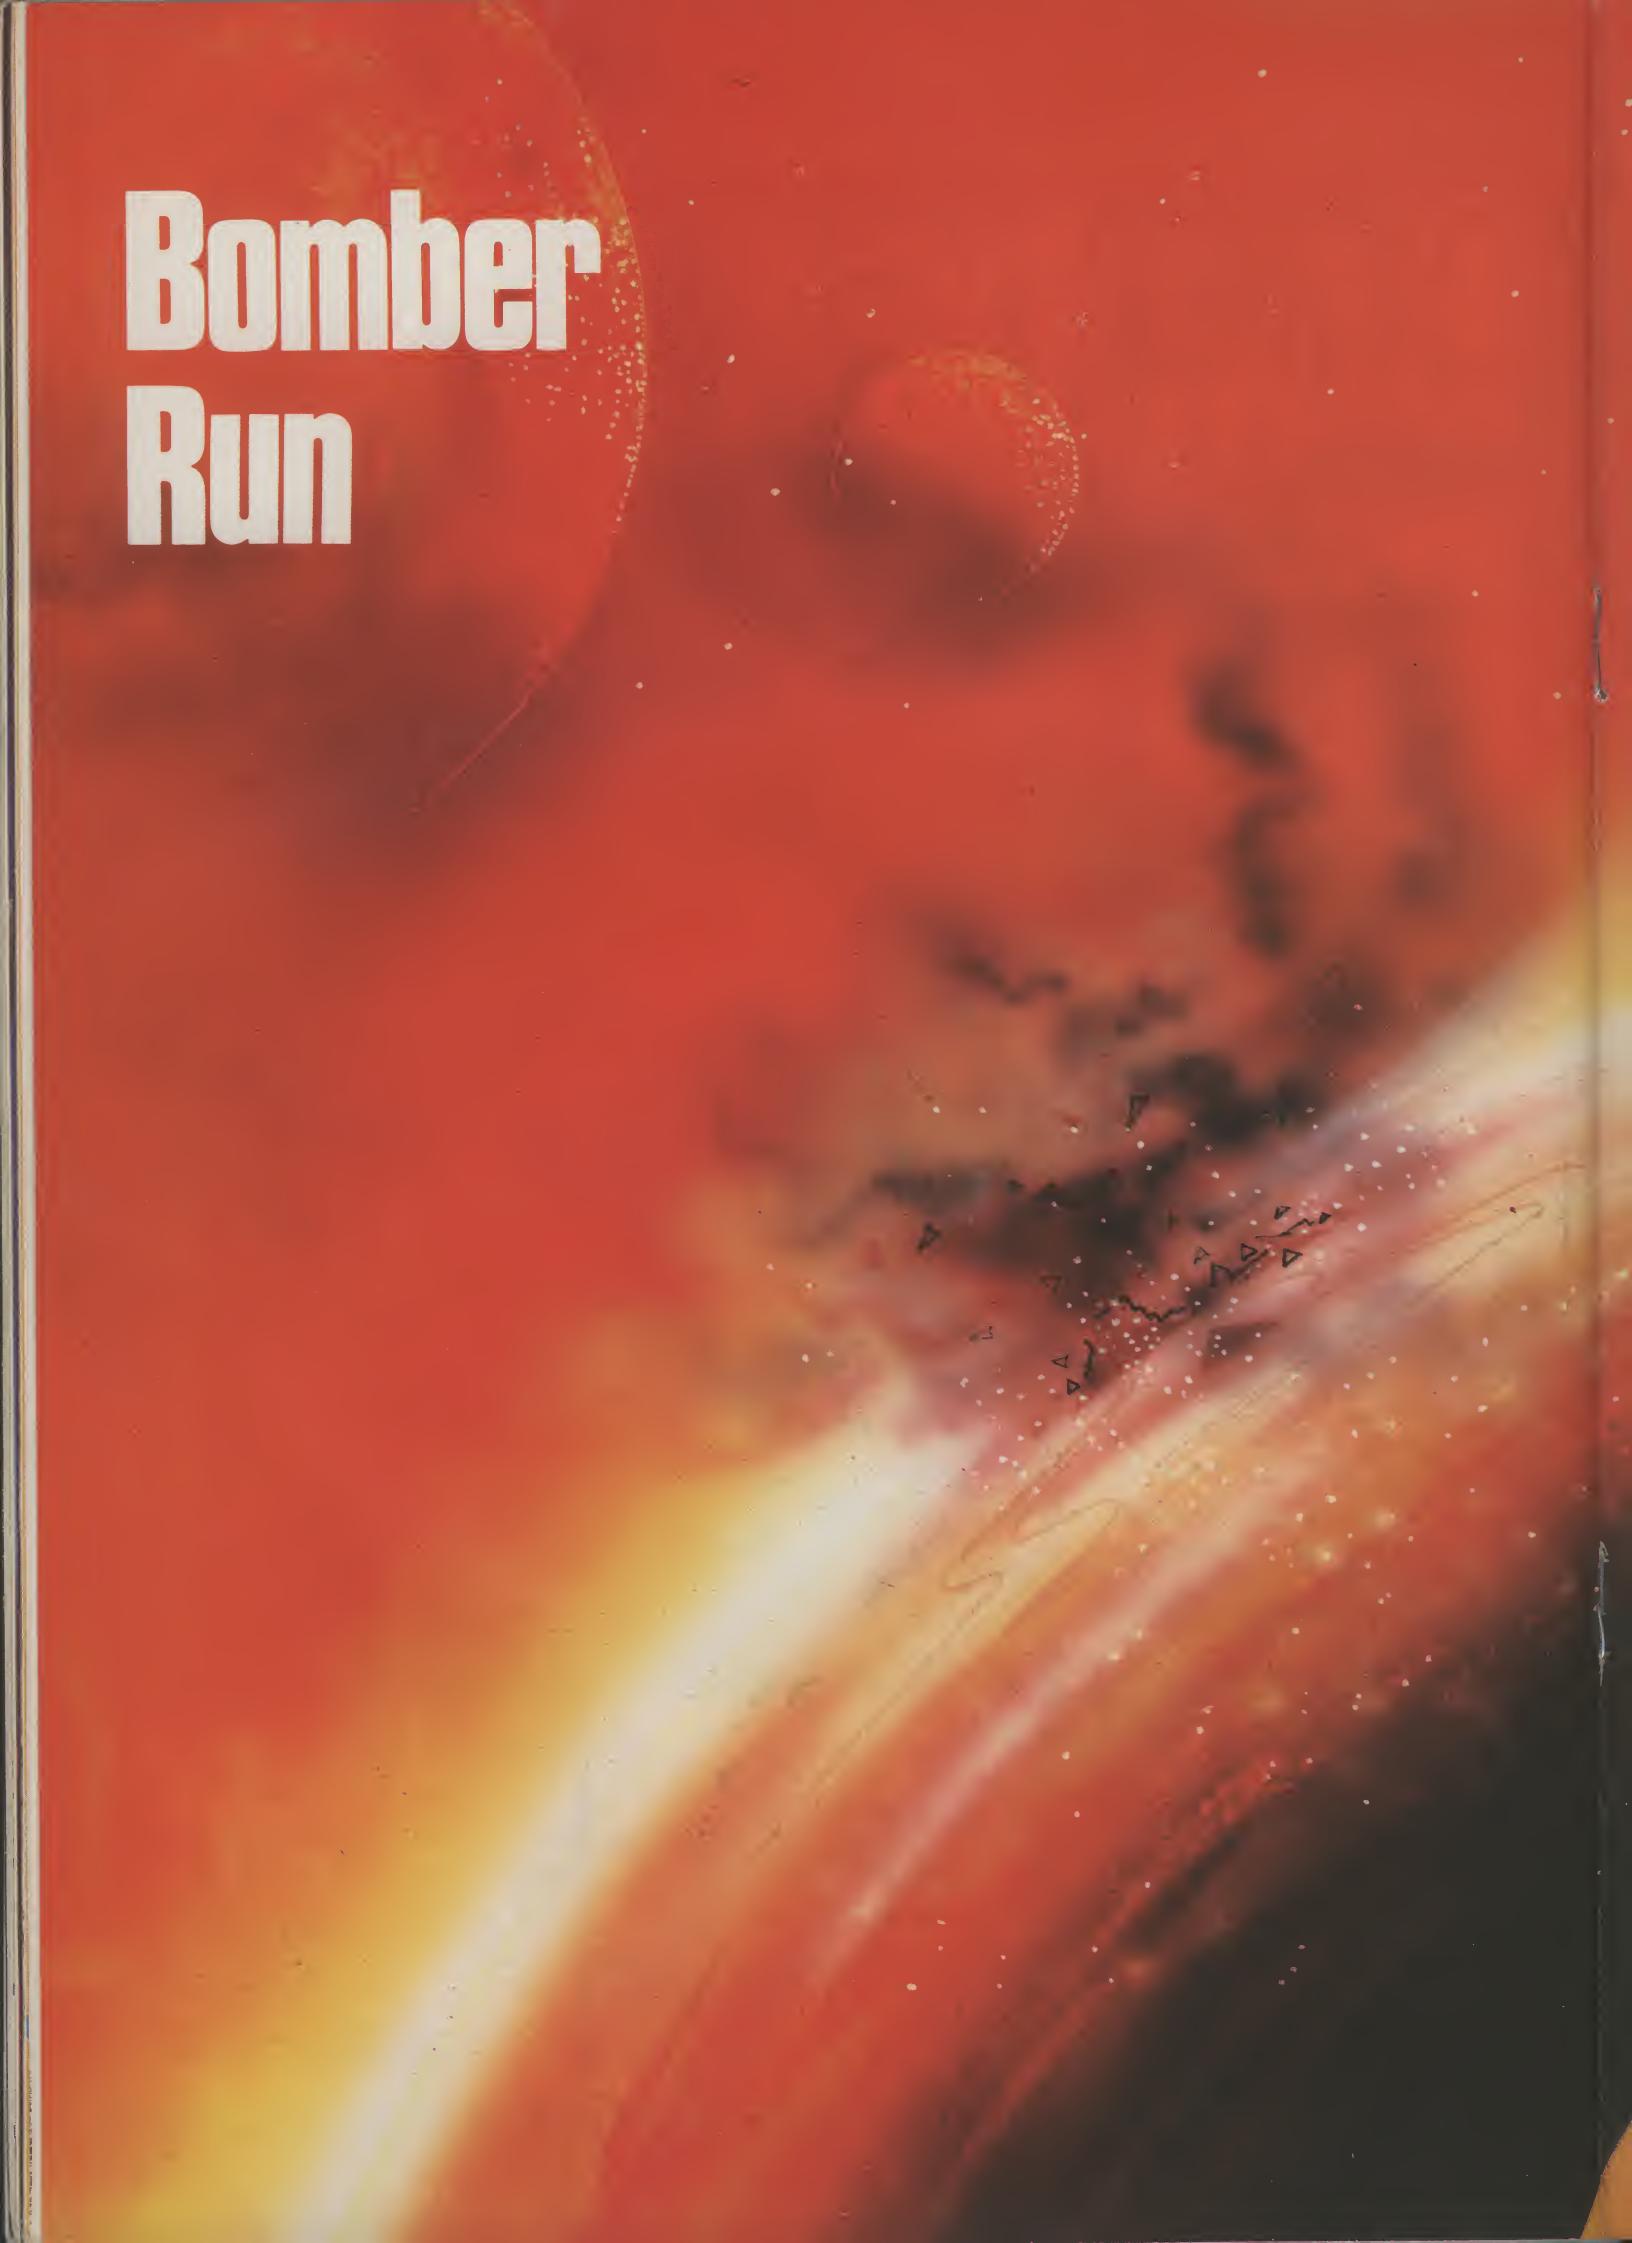

PSET Is the Dragon equivalent of **PLOT**.

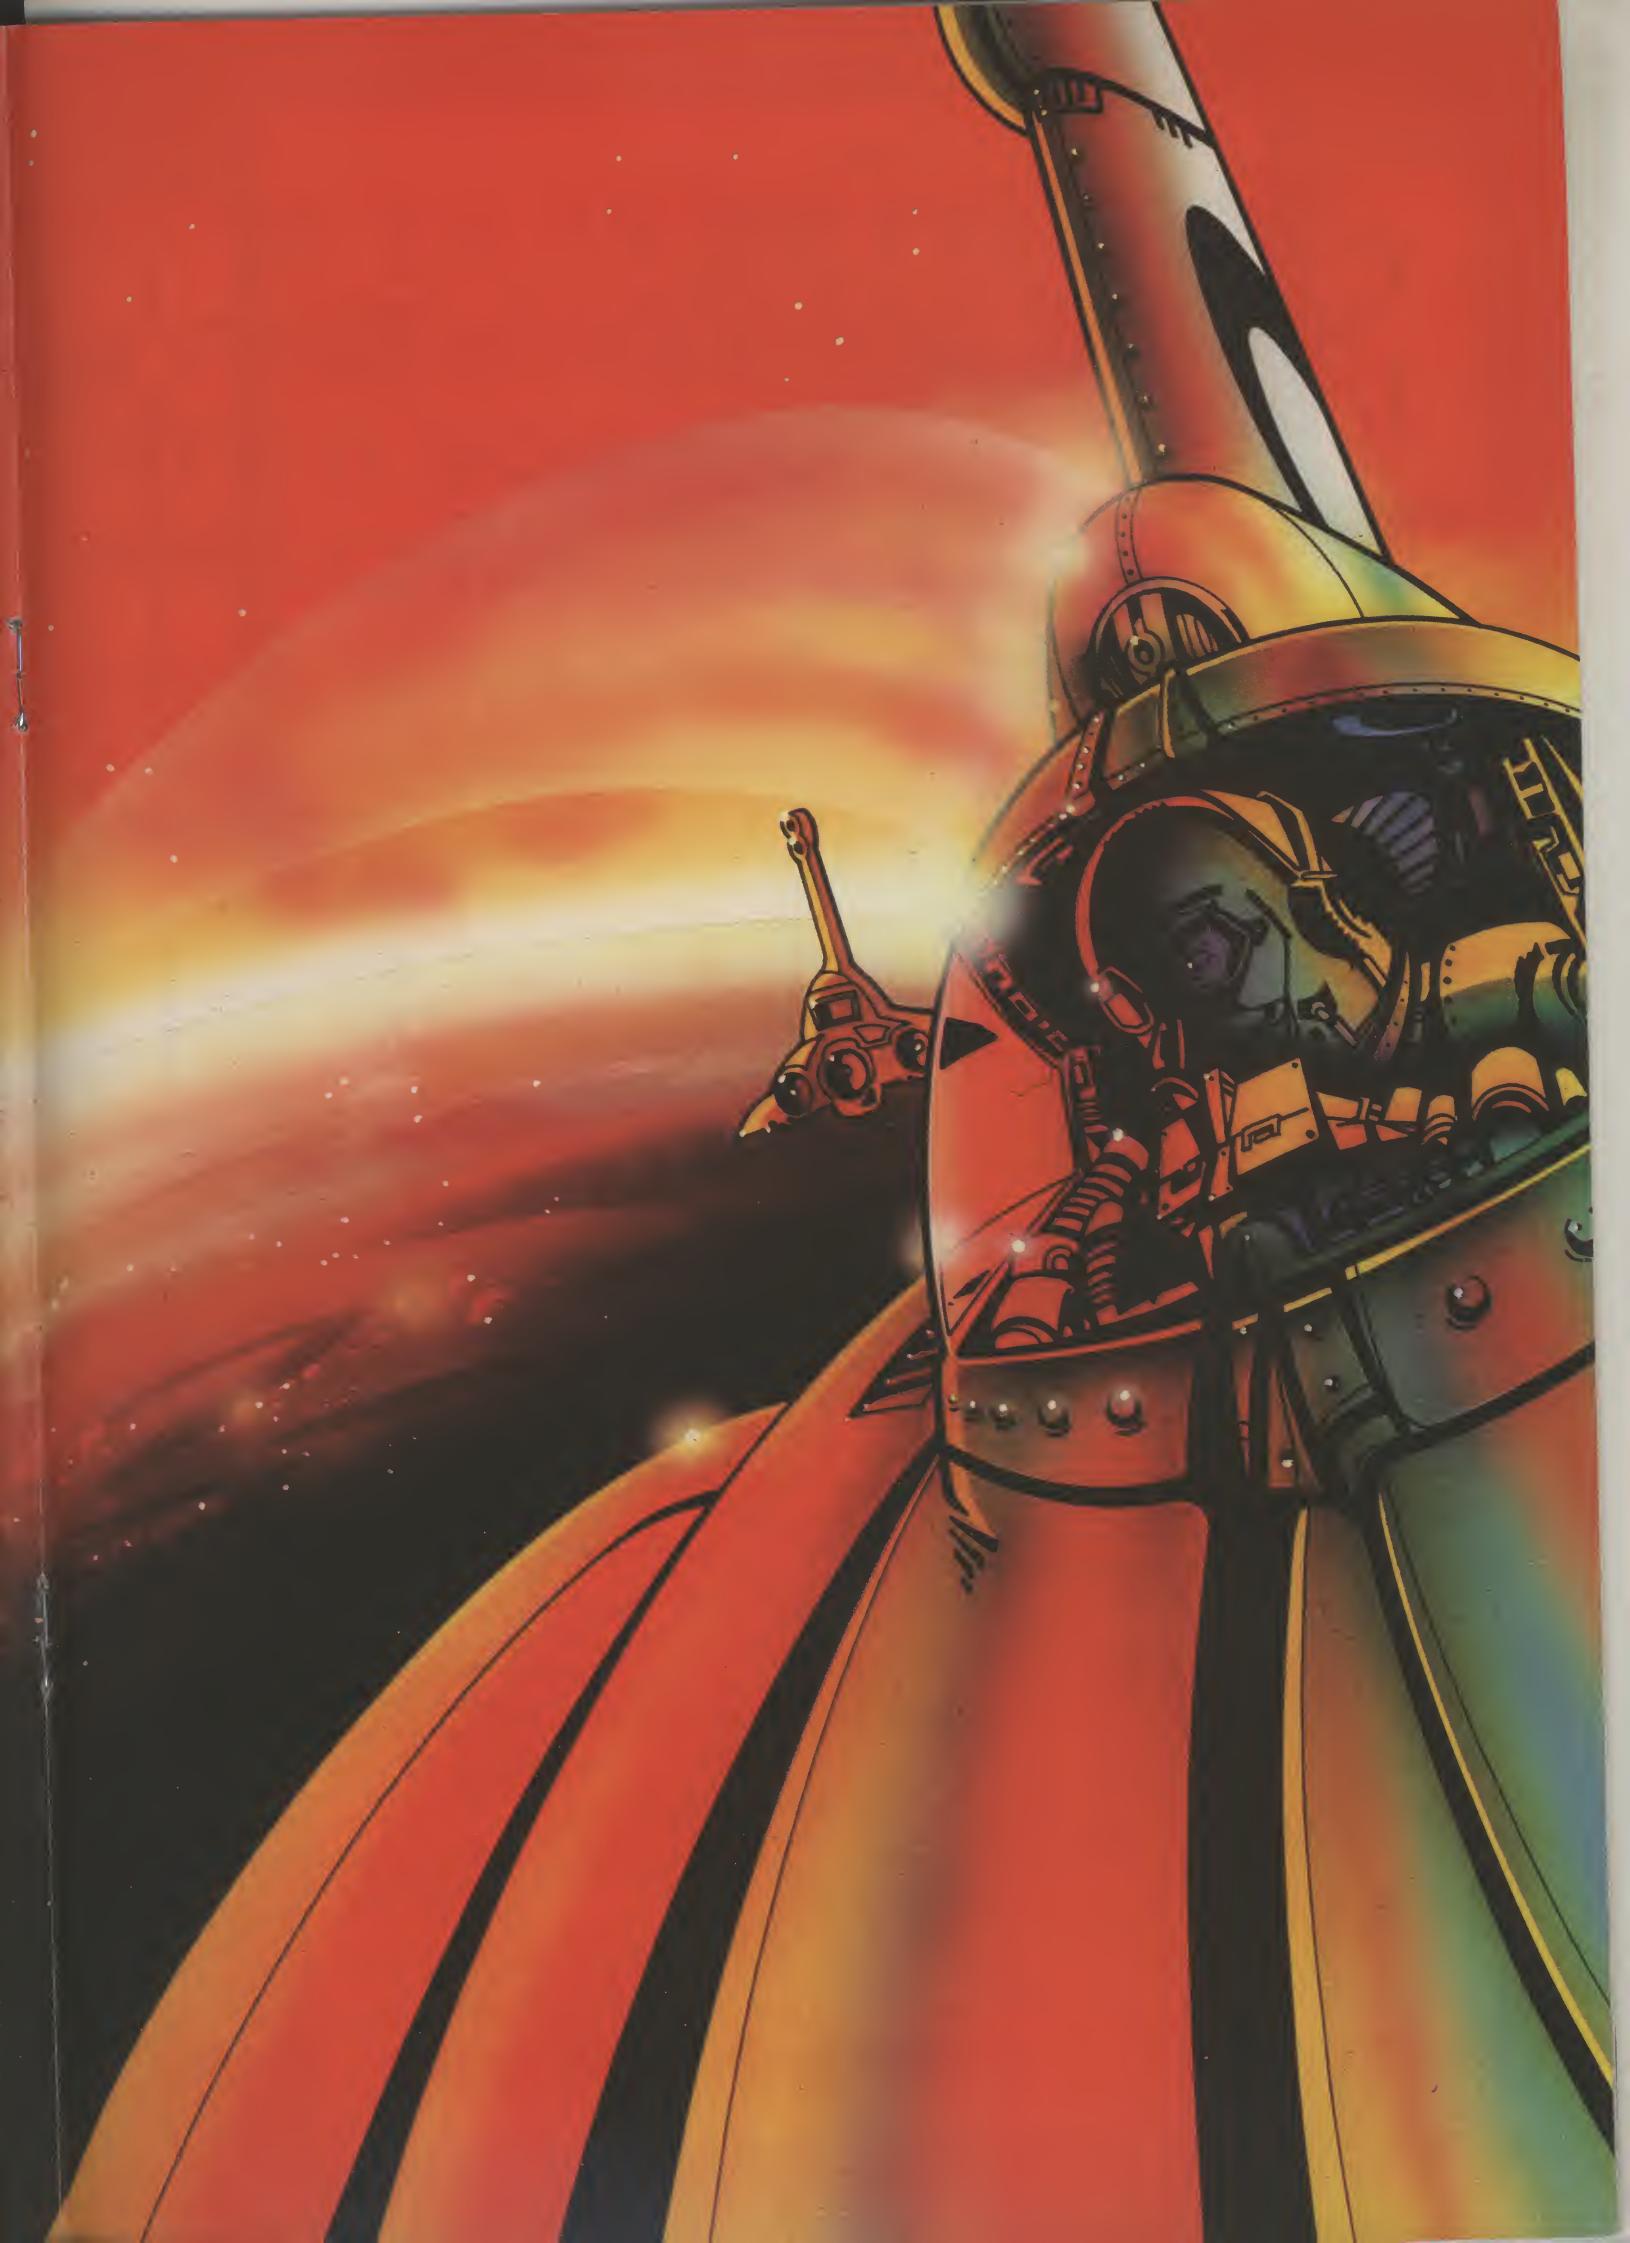

CIRCLE Draws a circle with centre X,Y a diameter of D, and in colour C. The syntax is **CIRCLE(X,Y),D,C**. This statement can be left out.

All **DRAW** statements that have been used are for drawing the game shapes, namely the ship and the bomb.

RUNS ON VIC-20

Zap the alien to bits with this arcade game for the unexpanded VIC-20.

In this version of a well known arcade game there is one alien and a 'spook' bomb that are out to get you. You control a space ship at the bottom of the screen that has a single missile launcher and can fire a missile that is guided by the motion of the ship.

The game uses high resolution graphics, full colour, and sound and yet can still fit into a totally unmodified and unexpanded VIC-20.

Controls are 'Z' left, 'M' right, and 'space' to fire.

GUIDED MISSILE

RUNdown

Line	Action
1-2	Instructions option
3-9	Set up hi-resolution graphics
10-12	Set up variables
12-14	Set up screen
13-32	Main control loop
33-36	Destroy ship
37-41	Destroy alien or bomb
42-44	End game and tidy up system
45-71	Instructions

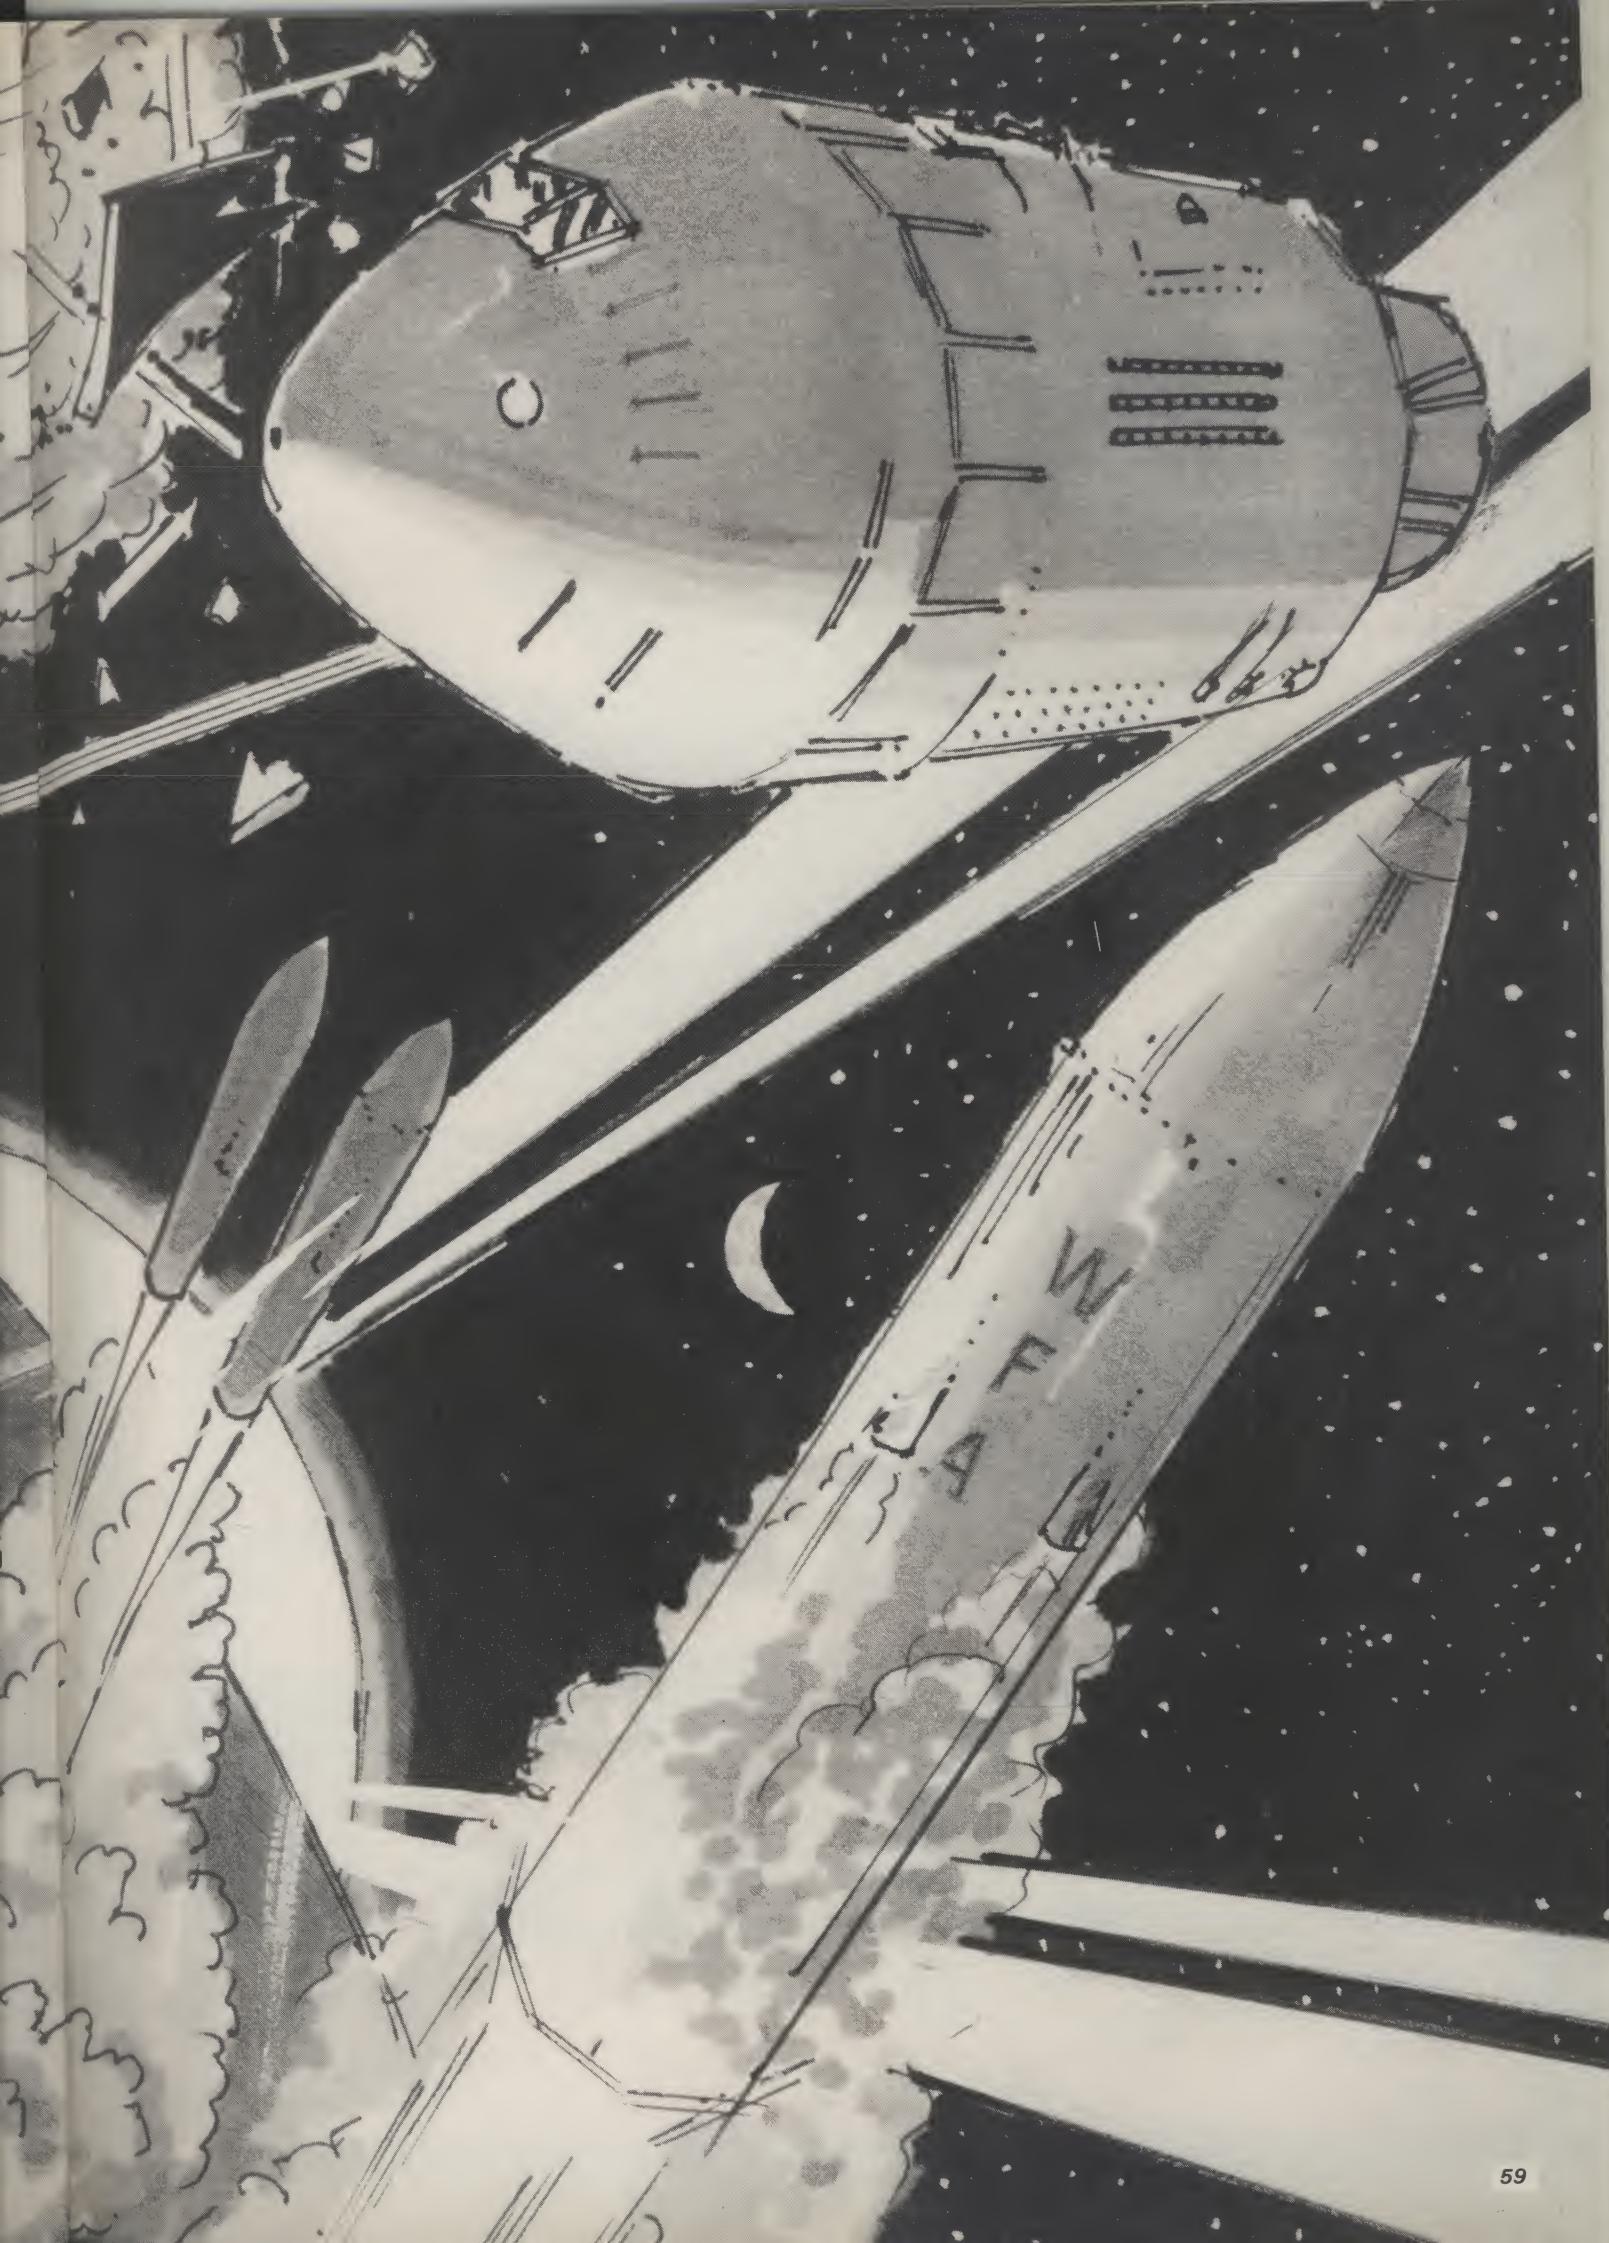

BO	Screen location of bomb
UC	User defined character pointer
S1,S2,S3	Sound registers
V	Volume level
SC	Score
TI\$	Time variable
C\$	Option input

Main Variables Used

SH	Screen location of ship
MI	Screen location of missile
AL	Screen location of alien

Conversion Clues

Almost impossible with the VIC as all the control of the sound and graphics is done via PEEKs and POKEs. A look through the VIC manual would tell you all you need to know about them. Commodore BASIC is very straightforward and converts easily to other micros, but I'm afraid that's your only consolation!

ANIROG

THE NAME FOR

ZODIAC

An arcade adventure of awesome proportions. The evil powers of hell have scattered the signs of ZODIAC in the 400 chambers of THE ABYSS. You have to find and recover these magical creations and fight all the way by annihilating all those who stand in your way.

J.S. £7.95

SPACE PILOT

Realise your dreams of being king of the open skies. Fly your aircraft into unrelenting dog fights with enemy fighters. Prove how well you can handle your craft. Five stages of spectacular scenic graphics. Two player option.

J.S. £7.95

MOON BUGGY

Manoeuvre your patrol craft over giant moon craters avoiding boulders and mines. Keep an eye on the hovering alien craft bent on bombing you out of existence.

J.S. £7.95

3D TIME TREK

A star trek game with a difference. 3D graphics, real arcade action and a game of strategy against marauding space pirates. Additional features.

K.B. AND J.S. £5.95

BONGO

Enjoy the hilarious antics of the Comical Mouse as he overcomes all dangers to win the heart of the lovely princess by collecting her lost diamonds. He must climb ladders, slide down the chutes, use transporters and trampolines to jump across divides to escape and outwit his pursuers. You will be enchanted by the smooth pixel movement of multicolour sprites. Six screens with three levels of difficulty.

J.S. £7.95

HEXPERT

Think before you jump on the 3D hexagonal pyramid. Avoid being crushed by massive rubber balls and the deadly fangs of COILY the snake.

J.S. £7.95

THE DUNGEONS

Enter the realms of fantasy and do battle with the fearful fire breathing Red Dragon. An intriguing role playing graphical adventure with 'SAVE' facility to continue the adventure.

K.B. £6.95

DARK DUNGEONS

Second in the series. Pit your wits against the cunning dwarf. A graphical adventure with 'SAVE' facility.

K.B. £6.95

GAMES MACHINE

COMPETITION

Ten Suncom TAC-2 joysticks are on offer in this great spot the difference competition.

The TAC-2 joystick is one of the Suncom range of joysticks made by Consumer Electronics. TAC stands for Totally Accurate Control. The control on this stick is excellent as there are no moving parts inside such as micro switches, to go wrong and no pressure pads to wear out. The internal electrical contact is made by having a metal bar for the central shaft of the joystick and metal plates inside to make contact with. The use of stainless steel for the part of the joystick that takes the most strain makes these joysticks one of the most long lasting designs on the market.

COMPREHENSIVE COMPATIBILITY

The TAC-2 is compatible with all Atari computers and video games systems, VIC-20, Commodore 64, Sinclair Interface 2, Kempston Interface, and any other computer using the Atari standard 9 pin DIN connector.

Suncom is the trading name for Consumer Electronics, a company that was formed in the summer of last year to sell peripherals for home computers using the latest state of the art technology. Consumer Electronics is expanding its range in the autumn and their new products, details have yet to be released, will be featured in a *Games Computing* competition in the future.

SPOT THE DIFFERENCE TO WIN

Pictured on this page are two similar pictures. There are some slight differences between them. All you have to do is to ring the differences on the coupon and send it to us. The number of differences that you found must be written on the back of the envelope that your entry is in. The ten prizes will be awarded to the first 10 entries pulled out of the post bag on the closing date.

Competition Rules

Competition Rules

1. This competition is open to all UK readers of *Games Computing*, except employees of Argus Specialist Publications Ltd, their printers and distributors, employees of Consumer Electronics or anyone connected with them.
2. As long as the correct coupon is used for each entry there is no limit to the number of entries per person, photocopies will not be accepted.
3. All entries must be postmarked before April 30, 1984.
4. The prizes will be awarded to the first 10 correct entries picked out of the bag.
5. No correspondence will be entered into with regard to the results and it is a condition of entry that the editor's decision is final.
6. The winners will be notified by post and the results will be published in a future issue of *Games Computing*.

SUNCOM/GAMES COMPUTING COMPETITION

Name

Address

Telephone:

In the first three articles in this series we have looked at the history of wargames, the nature of a wargame and how to computerise it, and the problems of randomness and generating a computer opponent. In this article I will be completing the analysis of how to produce a computer wargame so that the next article can apply the rules we've learnt to actually generate a simple wargame.

The first thing to cover this month is the problem of data storage. In war games it is common for large amounts of data to be required to simulate the large number of forces available to each contestant, their location, status, etc. For instance let us

suppose that we wish to produce a war game where the board is divided into 30 areas; in each area up to 99 units of artillery, cavalry, and infantry can be present. In the computer we can set up an array of 30 (locations) by three (types of forces). However this will require an array of 90 elements and at 10 bytes per array

W A R

element that's 900 bytes of storage. Not that much, but how about 100 locations by 10 types of forces?

Cutting Down Data

One way to pack down the data is to consider the limits placed on the values in each array element. In this case we will say that

GAMES

each element can contain 0 to 99. But the actual physical limit that can be held accurately in one array element is around 6 million, that's an awful lot of digits going to waste. If we multiply the amount of cavalry by 100, the amount of artillery by 10000, and add the result to the amount of infantry we should be able to store the three forces in one array element. For instance 16 artillery, 65 cavalry, and 48 infantry gives a result of 166,548 — the first two digits are the artillery, the second two are the cavalry and the last two represent the infantry. The BASIC subroutine to amalgamate the numbers is simple, as shown below.

```
LET T=A * 10000+C * 100+=I
```

The BASIC subroutine to separate the numbers is as follows:

```
LET A=INT(T/10000)  
LET C=INT(T/100)-A * 100  
LET I=T-A * 10000-C * 100
```

Where I is infantry, A is artillery, C is cavalry, and T is the combined total.

In order to use this technique to its full potential each multiplier must equal the limit of the element plus one, and multiplied by all previous multiples. So if you have three numbers with limits of 24,

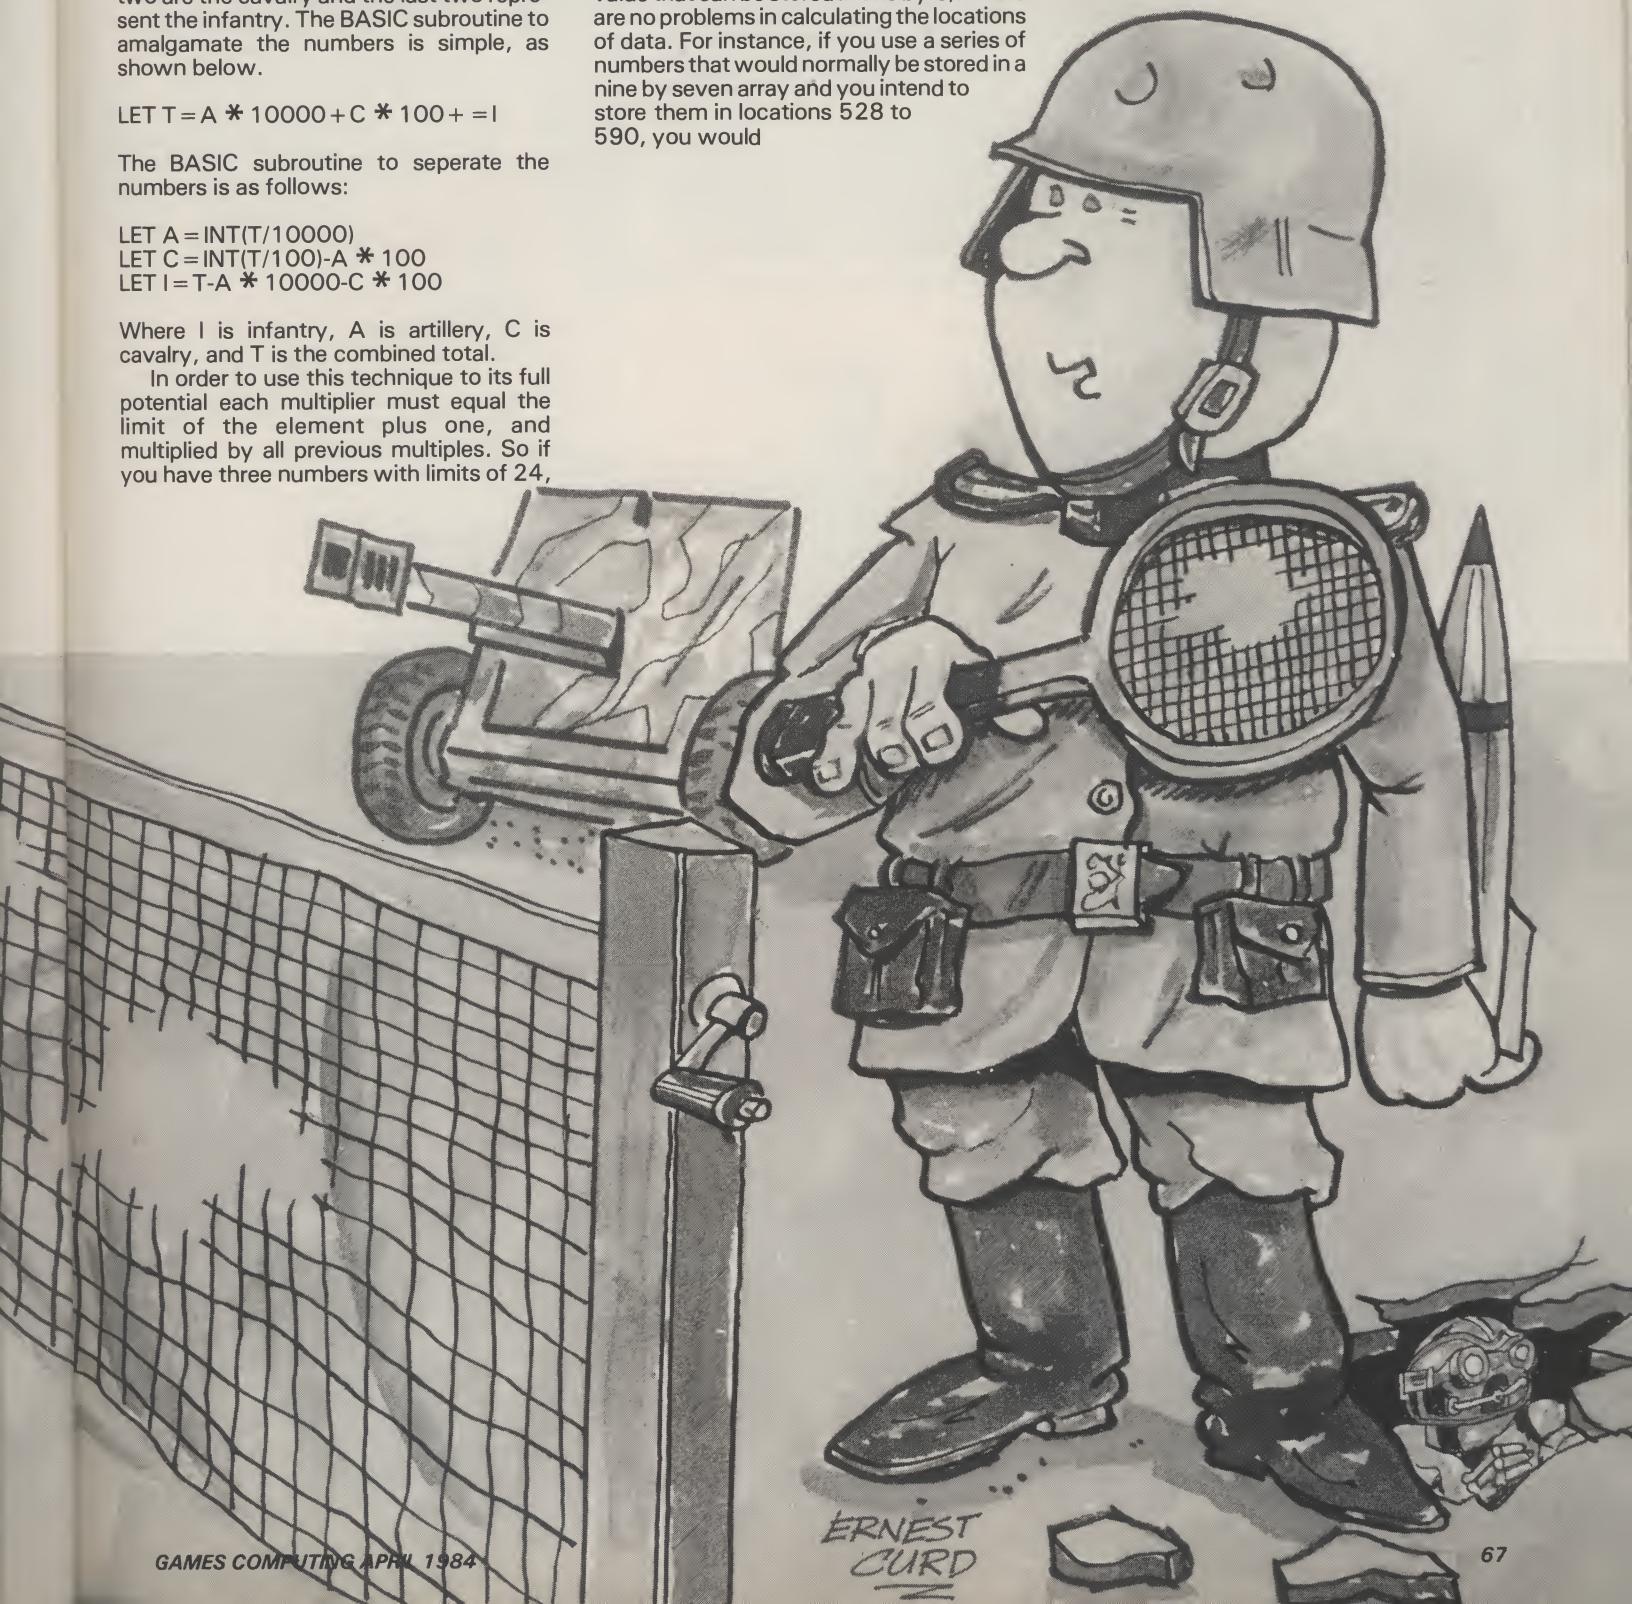

32, and 80, the first multiplier will be 25, the second multiplier will be 825 (25 * 33), and the maximum will be 18825 (25 * 33 * 81). In using this method you will need to look at the way your particular computer stores data to find out what is the largest number it can store accurately.

Another method of packing data is to reserve an area of memory and use it to POKE values into. This means that each value cannot exceed 255 (the maximum value that can be stored in one byte). There are no problems in calculating the locations of data. For instance, if you use a series of numbers that would normally be stored in a nine by seven array and you intend to store them in locations 528 to 590, you would

calculate the location of the data as follows:
location = $527 + (0 \text{ to } 8) * 7 + (1 \text{ to } 7)$.

Game Design

The next subject that we must cover is the difficult one of designing the playing board and calculating movement. We shall consider three different types of play area: the evenly divided board, the unevenly divided board, and the open board.

The evenly divided board is a copy of the traditional war game board. It is divided into areas by an even lattice pattern, usually squares or hexagons. Neighbouring areas are calculated so that square (4,5) would be next to squares (3,5), (4,4), (5,5), and (4,6). Hexagon (4,5) would be next to hexagons (3,5), (3,4), (4,4), (5,5), (4,6), and (3,6) — see figs 1 and 2.

The units available to each player run across the board one square or hexagon at a time, but usually being able to move no more than one square or hexagon at a time. Each square or hexagon can have a different terrain which can affect movement. Units occupy a particular square of hexagon and the units in this sort of game tend to be indivisible. Often the presence of enemy units in areas next to those that the friendly unit is to pass through can slow or stop the friendly unit.

This problem of movement across the grid relates to the objective that is to be achieved. If the objective is to reach a particular area then the area to move to is the one that puts you closest to that area; if the objective is to destroy enemy forces then the areas to move to are those next to enemy units.

The best path is the one that uses least movement points to reach the objective. It is found by looking at all neighbouring areas of find the one which best suits

movement to the objective, then areas next to that, and so on until all a unit's movement points are used up.

Alternative Design

The next kind of board is the unevenly divided board. In this the play area is subdivided into areas of varying size. The terrain effects of this kind of board are built in, so that difficult terrain has smaller areas than easy terrain. Movement is to neighbouring areas, and a list of neighbouring areas is stored. For example, a game with five areas as in figure three would have a list as follows: Area 1 neighbours 2,3,4,5; area 2 neighbours 1,3; area 3 neighbours 1,2,4; area 4 neighbours 1,3,5; area 5 neighbours 1,4. Units are considered to be in a particular area and to be divisible between neighbours.

Often units can only move to neighbouring provinces and the presence of enemy units in a province prevents movement out of that province. Movement here is also dictated by objective, but since it is usually more limited, it is usually easier to calculate.

Finally there is an open board. This board is more related to the wargaming tables used in figure wargaming. In this board each unit does not have an area location but an absolute location. That is the

location of a unit is considered to have an X and Y coordinate for its actual location, and the position on the screen is only an approximation to this location e.g. a unit 823 miles east and 288 miles south of the point of origin may be represented as being at position 82,29 on the screen. Movement is usually done by giving a direction and a distance to move. This type of board works especially well with featureless terrains where only a few self-contained units are involved. Sea battles work well on this type of board, also air and space battles as the third dimension can also be handled on this basis.

Last Words

Finally in this article I will look at the question of play testing. Suppose you have designed and programmed your re-enactment of David vs Goliath. How do you test that the game is programmed correctly, and how about the problem of giving each side a fair chance? And that most difficult of all items to include challenge?

The answer is to test the program by actually playing it. There are other things that can be done to ensure correct code: line-by-line reading of the code should pick up any gross errors of programming; and checking the major equations in the program by hand, calculating them outside the program will help to show whether they are producing sensible results. But some things can only be tested by actually playing the game. You must be prepared to spend many hours in intensive testing of the game, and if possible get a friend to help in the testing. Independent minds (or even fingers) can often find things that you would never have thought of.

There is a difficult line to draw between the wargame that is irretrievably boring and the game that is so close to interesting that it will turn out to be a masterpiece. If your game looks lost don't give up! Fiddle with the formulae, the starting positions the initial forces. Look at the board to see if it can be rearranged. If all else fails then go back to the original design and try the problem as a conventional board game. You'll be surprised how quickly problems show themselves when you are moving cardboard units over a piece of paper.

Presentation

Lastly a quick word on a most important subject: presentation. I cannot stress too highly that an attractive game leads to satisfied players. If your computer has colour and sound then use them as extra methods of passing information on to the player: Have a good map to play the game on; use user defined graphics to represent forces on the map. Don't bombard the player with a mass of figures that he doesn't read, give him only the information that he will read to make the decisions that he is faced with at that moment. Remember it is a *game* that you're designing.

So we have now covered all the major problems associated with designing a wargame, many of the things discussed in the series will apply to other strategic games, and to adventures, so don't disregard this information just because it has been directed at wargames.

In the next two articles we will be going through the design process to actually produce a wargame, and there will be a competition with a cash prize and the chance to have your game published by Argus Press Software — so get designing now!

RUNS ON
VIC-20

Simplex

Let your artistic talents run wild, become a new Picasso with this artistic drawing program for any VIC-20 with joystick.

The program is a fairly simple idea. All it does is to let the user draw lines up, down, left, and right, and also diagonally using a joystick. One feature is the colour, different directions have different colours. These can be changed by altering the number after POKE A + B,? in lines 0 to 9. Pressing the fire button deletes everything on the screen.

RUNdown

Line	Action
0	Changes colour of screen and starts subroutine
1	Defines variables A,B
2	Sets addresses 37137 and 37152 for input
3	POKES A and B onto the screen
4	Defines U1 and U2
5-7	Reads joystick for up, down, and right
8	Reads fire button and starts subroutine
9	Reads joystick for left
10	Keeps characters on screen
11	Stops reading joystick
12	Goes back to line 2
100-118	Instructions
1000	Routine for deleting screen

Variables Used

A Main character for drawing
B Colour for A
U1,U2 Joystick PEEKs

Conversion Clues

This is difficult as the VIC-20 uses PEEK addresses for joystick control. This could be changed to INKEY\$ or a GET command to read the keys instead of a joystick.

Transform your Spectrum now!

Transform your Spectrum now with the FDS Keyboard, the best selling Spectrum keyboard in the U.K. The Fuller FDS Keyboard with its stylish, slim-line appearance gives you the look and feel of a real microcomputer keyboard and helps you enter data with lightning fast accuracy.

The keyboard contains all the graphic characters of your ZX Spectrum plus additional function keys. It has 4 cursor control keys, an auto rub-out key, a separate key for full stop and comma, a full length space bar, shift keys either side and 2 function keys for direct entry into green and red E modes.

The microdrive is easily adapted to go inside along with the power supply. Fixing is simplicity itself, no soldering or technical knowledge is required. For the user who is reluctant to install his Spectrum circuit board inside the FDS, a buffer is available (£8.75 + 80p p&p) which simply plugs into the expansion port and connects directly to the FDS Keyboard, allowing the whole cased Spectrum to be installed inside.

RUNS ON ORIC

Go monster hunting in our maze/adventure game for any Oric computer.

When played, a board of 5 across by four down is displayed on the screen. Hidden on the board are 20 monsters. These monsters occur in two types, each of which can occur in 5 different colours. You have only twenty turns to hunt down the monsters. You may enter the coordinates of two locations at a time. The monsters hiding in these locations will then be displayed on the screen until you press the space bar. Your task is to find the pairs of monsters which are identical in both shape and colour. If you do locate a matching pair, they will remain on the screen. You must try to locate all ten pairs of matching monsters before your twenty turns are up.

If you enter the coordinate of a location which is already being displayed, the message 'silly!' will be displayed and you will have wasted a turn. You must then press the space bar to get your next turn. You must tell the computer which square you want to view by typing in the coordinate in the form of number letter, e.g. 2D not D2. The computer will not allow stupid entries.

The two monsters are built up out of the characters available in the alternate character set (TELETEXT graphics characters) and are thus not of a very detailed nature. It is quite straightforward to redefine these characters by POKING into the appropriate area of RAM to create monsters of your choice. These characters are held in the variables UA\$, UB\$, UC\$, TA\$, TB\$, TC\$ in lines 110-140.

RUNdown

Line	Action	
5	Turns cursor off.	355-356
6	Sets score to zero.	
10	Dimensions the array A(X) which holds the monsters positions.	357-360
20-30	Clears screen and chooses foreground and background colours.	361
35	Defines Z\$ as a blank string used to erase 1 line on screen.	362
40	Calls subroutine for instructions.	365-480
50-60	Sets number of turns left and defines colours.	490-620
90	Calls subroutine which fills the array A(X) with the monsters in a random position.	630-660
100	Calls routine to draw the board.	680
110-140	Defines characters (these are chosen from the alternate set!!)	800
150-160	Sets serial attributes on screen to alternate character set/standard set.	810-870
200-790	Main control loop :- repeats loop until SC (score) = 10 or E% = 1 all turns used.	880
210	Decrease number of turns left.	1000-1200
225	Turns to string.	2000-2070
226-227	Used to strip first character off string to overcome the	4000-4290

MONSTER HUNT

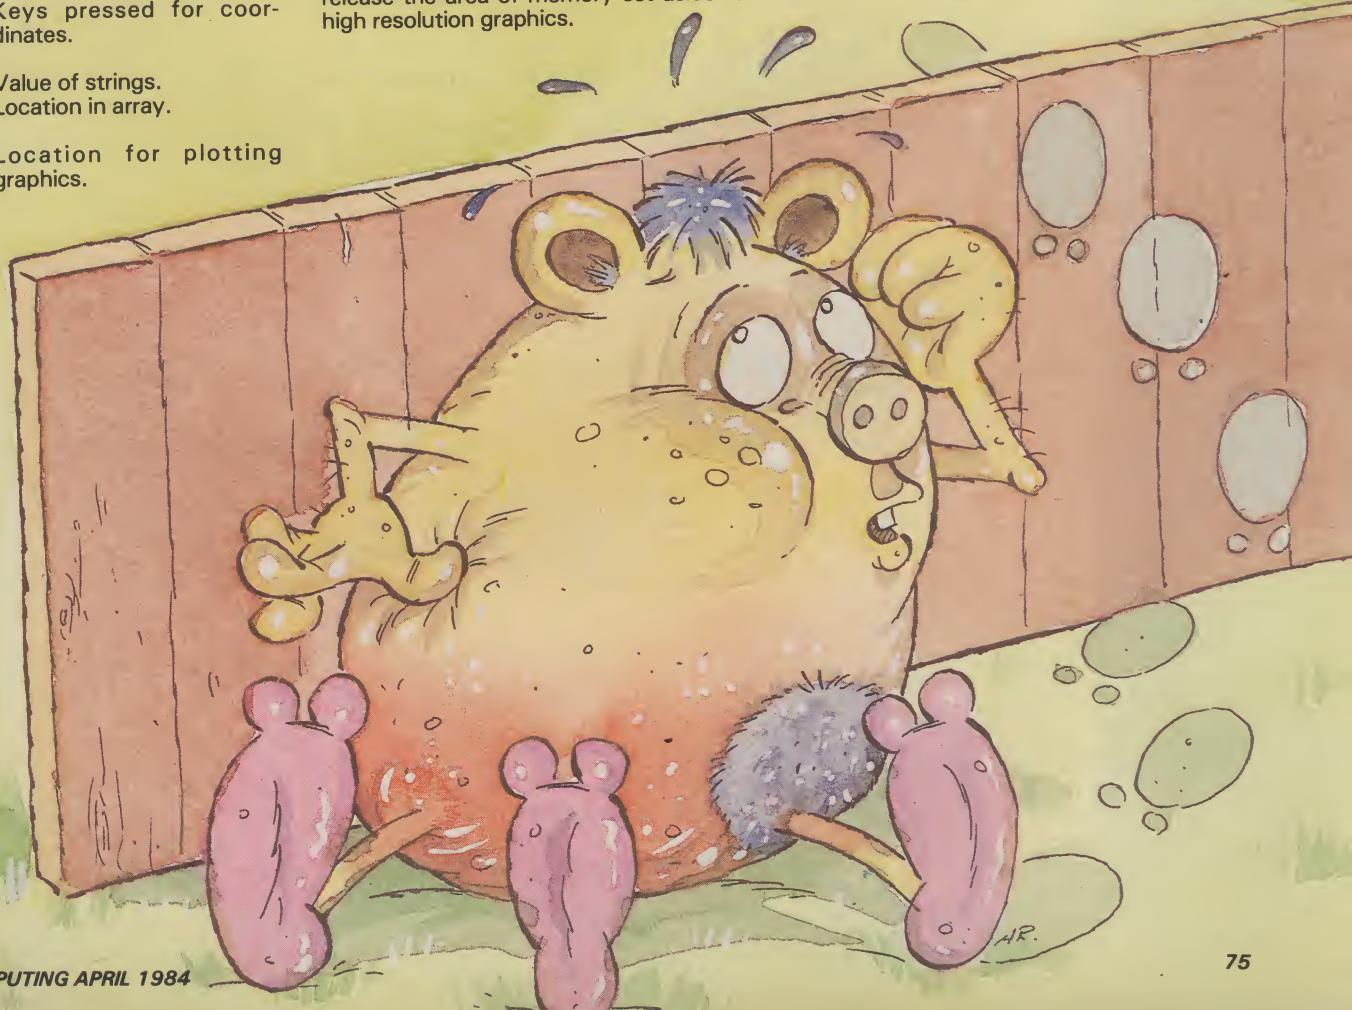

Variables Used

SC = Score.
E% = number of turns left.
A(X) = Array which holds a random sequence of numbers for monsters locations.
T = Used for music.
EE\$ = Holds string value of E%.
AA\$,AB\$,
AC\$,AD\$ = Keys pressed for coordinates.
AA,AB,AC,
AD = Value of strings.
ZZ,ZF,ZG = Location in array.
XX,XY,YX,
YY = Location for plotting graphics.

FA\$ = Test for key pressed.
G\$ Tests if you want another go.
X,A,Y,N Counting loops.

Conversion Clues

The program will work in a 16K Oric if all REM statements are removed and line 1 is replaced with TEXT:GRAB, which will release the area of memory set aside for high resolution graphics.

TOY FAIR

Late January sees the staging of the toy world's most important show at London's Earls Court. It is there that the annual British Toy and Hobby Fair takes place and is the event at which the trade decide exactly what products they will stock in the coming year — especially prior to Christmas, the toy trade's boom selling period.

But this year there was a new generation of toys taking over from the traditional type of toys in the shape of video games, home computers, computer games and electronic hand-held toys. Although this wasn't the first time such toys had been on display at the Toy Fair this year it was noticeable that several toy firms are now spending a lot of money on such equipment.

Games Computing spent a day at the Fair and this is what we found.

PARKER PILOTS NEW GAMES

Parker is one of the relatively newer arrivals on the video games scene but have entered the market in a big way. Right from the start they seem to have got their policy right by anticipating the fall-off in sales of video games hardware in favour of the home computer. Instead of continuing solely with VCS games they made the wise move of producing their best selling (and also new) titles for the most popular home computers. Of course, they are still bringing out products for the Atari 2600 VCS, Intellivision, Colecovision and Philips G7000.

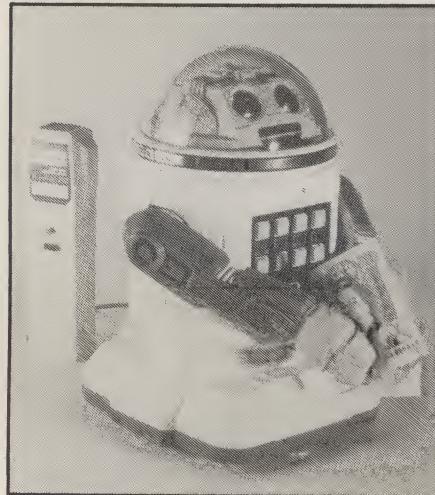

But the news for 1984 is that the Spectrum with Interface 2 will be a big favourite this year and as a result Parker is to bring out several cartridges to plug into this new Spectrum extra.

Currently in production are two arcade style games, the very popular Gyruss and another game in the Star Wars vein, Star Wars — the Arcade Game. From the word go it's always been Parker's policy to produce games software based on original arcade games or to get the rights to develop games from films.

Due for release in August Parker promises to reproduce the video game Gyruss as faithfully as possible to the original game. If they succeed it should prove to be a great game. The concept of the game is an alien shoot out theme — but with a difference. The action happens around the centre of the screen. You control a space ship and must shoot the aliens as they fly in an ever increasing spin outwards over the screen. But you dodge the red coloured aliens — these are the bad boys and if you make contact with them your ship is blown up. Bonus points are given for staying alive over a certain length of time and if you shoot down particularly nasty aliens. For true arcade fans Gyruss will definitely be an addictive game.

Star Wars — the Arcade Game looks set to be a winner too, providing the transferral process to VCS and computer is not too restricting.

The scenario of this Star Wars adventure is the famous trench and you are in command of Luke Skywalker's craft. You must navigate the ship down the trench, blowing up the red fire balls on your flight path in order to survive. At the end of the trench you must fly your ship down a shaft and destroy the Death Star. You have the option of flying to various planets in the

galaxy with difficulty levels varying on each planet. You have to guide your craft through space, shooting down Federation Fighters which zoom up in front of you. The original game has a 3-D effect which makes your dabble with death particularly frightening and realistic.

Both these games should be available for the Atari range of home computers, the Spectrum 48K (Interface 2) and Commodore 64 later in the year. They will also be available for use on the Atari 2600 and Colecovision. So look out for more news of these brand new games in future editions of *Games Computing*.

At the moment Parker plans to stick with the Spectrum, CBM 64 and Atari (Texas too) as their hardware base for games development. There are no plans to produce games for the BBC micro because Parker feel that currently that machine is well catered for in software terms and believe it is more of an educational computer than a games computer.

ATARI ACTION

With the label of market leader sticking firmly to Atari it looks like their main worry for the future is to continue to produce good quality software for both the VCS type or systems and computer systems.

At the Toy Fair Atari was heavily in evidence with their entire range of new games on show. The latest addition to the VCS range are two games. One is the first in the Peanuts series and is called Snoopy and the Red Baron. The second is the now well known Mario Brothers which is a development from the arcade hit, Donkey Kong.

Released in early January, the first game is all about Snoopy taking on the Red Baron — in his kennel? What will they think of next? Snoopy's mission is to recover his stolen food supplies of hamburgers, ice cream cones, and popcorn from the Red Baron by sharpshooting the Baron down. When the Baron drops any morsel of food you must watch carefully and catch it by touching it with Snoopy's doghouse. Vigilance is needed because the wicked Baron also makes sneaky drops of skulls and cross bones — and if you catch either of these you lose all the supplies you've so far recovered.

Naturally you score points for shooting the Red Baron and collecting food supplies plus bonus points at the end of a round.

This is a one player game and costs £19.99. It really is aimed at younger children and will make a good game for that age group.

In the Mario Brothers you must help the two of them, Mario and Luigi get rid of pests infesting their house. There are several different types of pests to get rid of including shell creepers, sidestepers and fighterflies. Each variety has to be tackled in a different way in order to destroy them.

Points are scored for knocking pests off the floor levels, collecting coins and bonus wafers for outwitting the icecream man called Slipice.

Once you start earning bonus objects like wafers the points up for grabs get really high. Altogether there are eight skill levels and you can play either by yourself or rope a friend in to play with you. This game is more expensive than Snoopy, costing £29.99 and it will be on sale from February.

KIDS KEY PADS

Specially for very young children comes a new venture from Atari with educational games and a Kids Controller.

The games have been designed to teach children the basics of counting and letter recognition. So far three games are on sale, Cookie Monster Munch, Alpha Beam with Ernie and Big Bird's Egg Catch.

Each of the games is fun to play yet has a purpose to them and should make early learning fun to do. They would be ideal for a mother to play with her young children and will keep them busy but won't waste their time.

For in Cookie Monster Munch the idea is to teach the basics of addition and subtraction. The child controls the cookie monster and makes him pick up cookies, put them in the cookie jar and count them as he munches them one at a time.

The Kid's Controller has been specially developed for small fingers to use. The controller is rectangular in shape and made of brightly coloured plastic. On each one there are a selection of numbered buttons over which you must place an overlay corresponding with whatever game your child is playing — they come with each individual game. They are especially attractive to children with a funny illustration of the game appearing on each overlay card.

In Alpha Beam with Ernie the object is to pick up and place letters which are floating in space (on screen) in the corresponding fuel bays in the space ship. Again you use the Kids Controller to operate the game and by playing the game young children will learn to recognise the letters of the alphabet.

Finally, Big Bird's Egg Catch is the newest of the Sesame Street library. The

aim of this game is to teach children visual skills needed for early reading and problem solving. The child must help Big Bird catch white and golden eggs thrown down to him in order to help him win the Country Fair Egg Contest. For every egg he catches the child scores a point (five for a golden egg) and the child must manoeuvre Big Bird to stand under a chute to catch each egg — otherwise it will fall to the ground and smash.

There are 10 skill levels and games for one or two players and is once again played using the Kids Controller. Atari say that this game 'helps impart a sense of timing and direction, together with improving hand and eye-coordination'.

If you buy the Kid's Controller separately it will cost you about £15, but Atari is currently running a special offer whereby you can buy both the controller and the game together for £29.99. Each individual game costs £19.99.

ATARISOFT

Atarisoft — that's the new name given to Atari's range of computer games developed from existing VCS games.

So far the firm has concentrated in producing software for the Commodore 64 (in cartridge form) — titles include Centipede, Defender, Dig Dug, Pac Man, and Robotron 2084 and all are out now. For the TI/994a, also in cartridge form, are Defender, Donkey Kong, Pac Man, Picnic Paranoia and Protector II. The VIC 20 has the same games as the CBM 64 plus Donkey Kong, while the Spectrum has cassette versions of Galaxian, Pac Man and Ms Pac Man.

But the latest computer to receive attention from Atarisoft is the BBC. Unlike Parker Video Games Atari has decided to produce some of its games for the BBC machine despite the fact that it already has an extensive base of games available for it. Coming soon for the BBC Micro are titles like Dig Dug, Donkey Kong, Ms Pac Man and Pole Position.

Prices of the games from Atarisoft range from £14.99 for the Spectrum games to £19.99 and £24.99 for the other games. Prices for the BBC games as yet are not fixed. Don't forget to watch out in *Games Computing* for reviews of these games in future issues of the magazine.

YOUR VERY OWN ROBOT

Specialists in electronic toys Tomy has come up with a marvellous creation which will keep children and adults alike quite for hours.

The firm's voice recognition robot called KI-KU ZO on its front looks a bit like the android that soared to fame in the space fiction film Star Wars. He's a bit smaller though and is made of blue and white sturdy plastic. But inside he's full of the very latest in voice recognition electronics.

You can make him obey your every (well, all of eight) command(s), by first programming him to respond to such things as: **stop, talk to me, pick up, put down, go forward, go back, turn left and turn right.** You do so by pushing the eight yellow buttons located on his control panel on the front of his chest, and by speaking through a hand-held receiver.

When he moves, or listens to your voice you'll see his eyes light up and start flashing. He looks like quite a friendly soul and one that I can imagine many people

will want to have around the house! The only slight drawback is the price. It currently stands at £35 which is a lot of money, but when you compare it with the price of a video game cartridge it doesn't sound so unreasonable. The question to ask, of course, is how long will its novelty value last?

3-D GAMES

A 1984 best-selling range could well be the Tomytronic 3-D Games from Tomy.

These are superb electronic hand-held games featuring 3-D graphics and one with stereo sound during play. Tomy have really excelled themselves with their new game Stereo Sky Fighters, an advanced development on a similar 3-D game brought out last year. The 3-D effect is tremendous as planes fly towards you and loop the loop across a three dimensional screen.

The stereo version has individual sounds for the planes and the machine gunfire, as well as two bi-planes that loop and loop. Although this toy costs about £30 you'll find it totally addictive and won't be able to put it down for ages.

Other similar games in the range include Sky Attack in which you control three laser firing tanks and you must use these to shoot down the enemy craft, or you can avoid them by dodging across the screen. There's also a car racing game called Thundering Turbos with special buttons for speeding up and slowing down your car as you race around the dangerous twists and turns of the course. Planet Zeon sees you in command of a space fighter fleet and you must destroy the enemy craft and capture the alien fuel tanker too. All in 3-D.

The other brand new addition to the range is Shark Attack and is based on the Sky Attack game. In Shark Attack what seem like hundreds of wide-mouthed sharks are attacking three divers, which you control. The divers have special spears to defend themselves from the sharks — use these to kill the sharks before they devour your divers. You can also avoid the sharks by dodging across the screen so that you miss being swallowed up by those great big jaws. The visual effects are so realistic that when a diver gets eaten you can almost feel those teeth sinking into your own flesh! Definitely not one for the squeamish. The price for this game is about £27.

BANDAI BOOST

Another electronic toy manufacturer showing their range of new toys for 1984 is Bandai and they appear to be an enormous improvement to the firm's range.

Bandai's pocket sized arcade games have been improved not only in looks, but also in playability with several new variations to the theme. Most noticeable is the mini hand-held game Space Centurian Gundam which consists of three screen games with joystick controller, a coloured screen background, sound effects and three phases of battle scenes in one game.

Similarly Bandai's version of the successful arcade hit Zaxxon shows a marked improvement with an in-built watch to boot.

In this game there are two different battle scenes displayed in LCD graphics, a joystick controller and sound effects. The game incorporates a three dimensional effect and five different game patterns. In addition you'll find buttons for firing

missiles and dropping bombs on the unsuspecting enemy.

But a completely new addition to Bandai's range are the table top style arcade games. These are styled to look like coffee tables with arcade games incorporated into them, only the Bandai band are on a miniature scale. They have a look all of their own with the screen located on the 'top' of the table and the control buttons situated on the side of the table.

First off, there's a three colour fluorescent game called Dynamite with a joystick controller, an attack button and sound effects. The object of the game is to kill off the enemy using your dynarockets and dynarobot and survive for as long as possible from enemy fire.

Others in the range, with the same facilities except for the three colour display are Toutankhamon and Space Guardian Gundam. In the first you have to find the hidden treasure of Toutankhamon going through five different scenes. You must climb up a number of levels with a pyramid collecting things on your way and avoiding sudden dangers.

In Space Guardian Gundam there are three scenes in which to play for your life. In the first you must shoot the enemy spaceships and avoid all missiles fired by them. And in the second and third scenes you continue your onslaught to victory — if you're lucky. This game features a similar coloured screen background to Space Centurian Gundam as well as the standard joystick controller, sounds button fire and built-in clock.

MORE FROM BANDAI

Still remaining with this theme is another game in the range of Bandai products, the arcade, two-player arcade style Space Guardian Gundam. This time it's the guardian against the Zions (whoever they may be) and its features include four bright colours (white, red, blue and green), two battle scenes and a game for two players or two skill levels for one player. You can also adopt one of two strategies, defence or attack — it's up to you. Again this game has a built-in joystick controller.

Finally, Bandai has come up with an electronics robot game. Made out of chunky white plastic, with jointed arms, legs and chest the LCD game is located in the centre of his chest. There are three phases of battle scenes to play and you have to build up the robot as you play the game virtually following the story line. In the first part of the game you must make your robot avoid the missiles (the robot character is featured in the LCD game) and you must win the first to make up your own robots shoulders. Win the second to get the legs and so on.

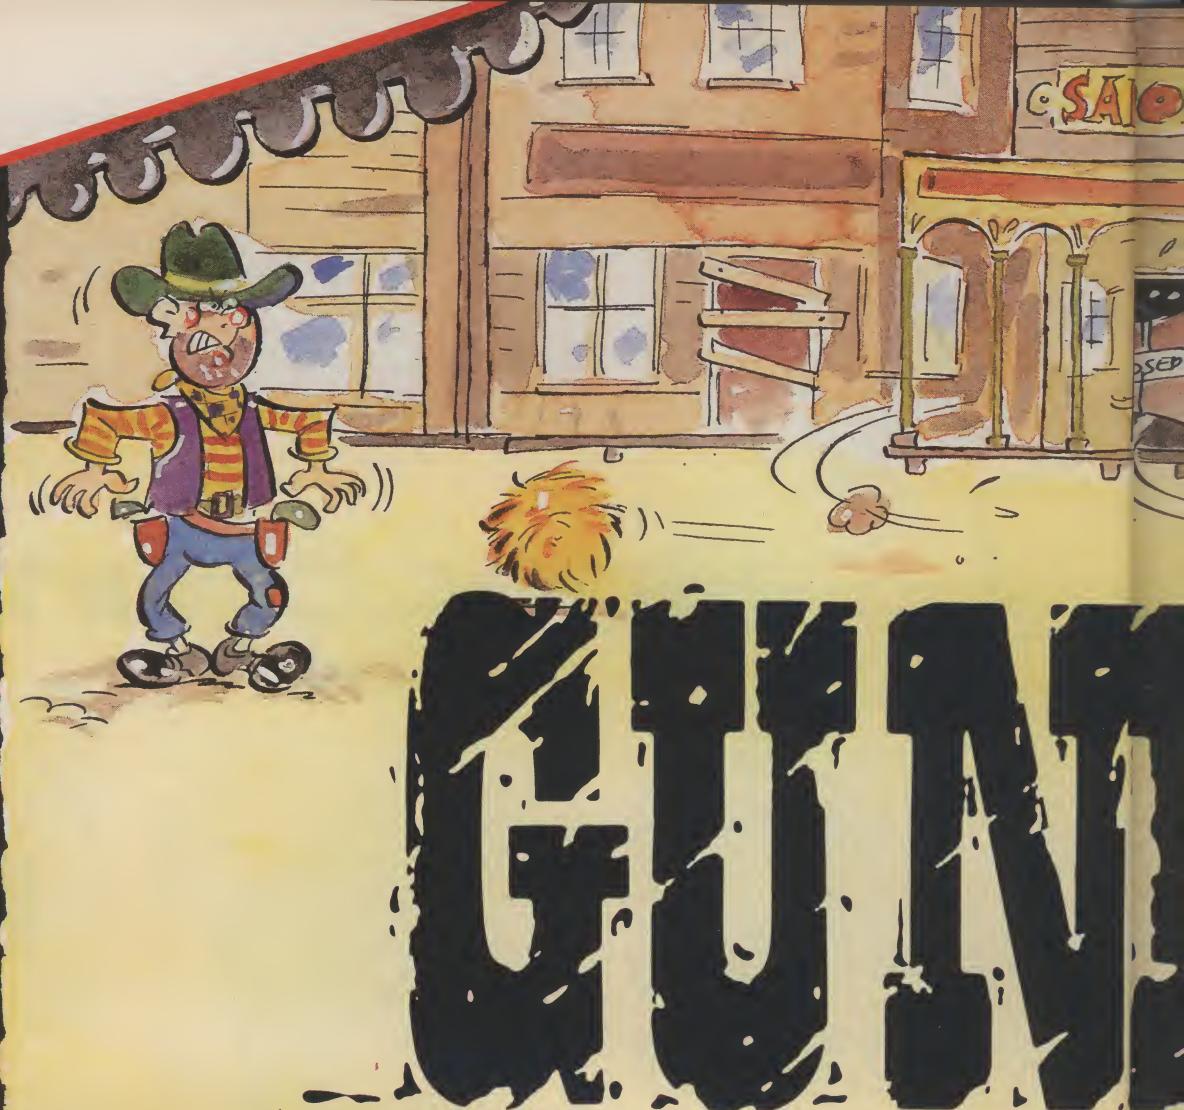

You are told which part of the robot's body to add next by a sign on the screen, but you can only add on a piece of his body by actually winning the phase of a game. And it's only when you finally win the third and last phase that you will be able to completely build your robot.

So you'd better make sure your arcade playing is right up to scratch or else you'll have loads of arms and legs all over the place!

So that's what to expect in the shops later in the year. Remember that most of the toys will not be appearing in the shops until after the middle of 1984 so you will have to wait and see for yourself what they're like to play.

**RUNS ON
TI-99/4A**

Grab your guns and start slinging in this great arcade game for the TI99/4A.

It's a version of a very popular arcade game in which you control two cowboys who are out to shoot each other down. Our version of Gunfight is a two player game in which joysticks are used instead of the keyboard making it much more interesting.

RUNdown

Lines	Action
180-230	Sets up the variables.
240-290	Sets colours.
300-390	Sets characters.
500-740	Sets up screen.
750-1150	Main control loop.
1160-1450	Controls gunfire, death and the cross which appears.

1460-1560 Loop for music.

1570-1670 Controls results and new game.

Variables Used

K =	Row number 2nd man.
L =	Column number 2nd man.
M =	Row number 1st man.
N =	Column number 1st man.
PI and PO =	Set up scores.

Conversion Clues

The following commands should help you to sort a few things out in the program which will make conversion to other machines easier.

GRAPHIC

CALL COLOR (A,B,C) Sets character group A to foreground colour B and background colour C.

CALL KEY (O,K,S) Input from keyboard or joystick button, key pressed is K, S tests if key has been pressed and returns 0 if no key has been pressed.

CALL CHAR (X,n\$) Defines ASCII code X to hex string n\$.

CALL SOUND (D,N,V) Creates a sound of D milliseconds, frequency N, volume V.

CALL CHAR(Rn,Cn,A,N) Places character A at row number Rn and column number Cn and repeats if N number of times horizontally.

CALL VCHAR (Rn, Cn, A, N) Works the same as HCHAR only repeats vertically instead of horizontally.

CALL GCHAR (Rn,Cn,N) Equivalent of Peek, assigns ASCII code of character at row and column stated to numeric variable N.

CALL CLEAR Clears the screen.

CALL SCREEN (C) Colours screen colour (C).

CALL JOYST Equivalent of call key but accepts control of joystick.

Get liquidated!

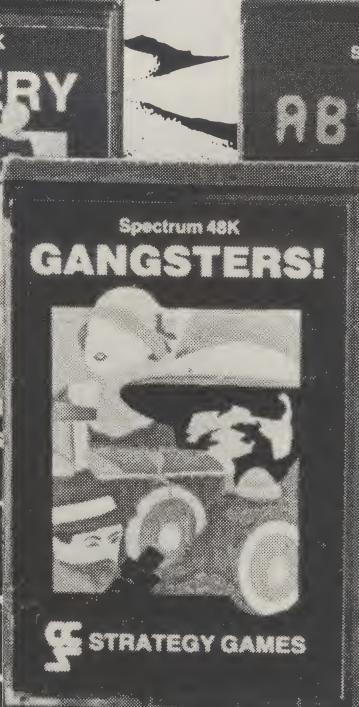

Introducing five great new games from CCS guaranteed to give you plenty of trouble.

You'll get no peace in the prohibition days of *Gangsters* — if the cops don't get you, your rivals will. Try keeping your head above water in *Brewery* — a game all about liquid assets. We'll try our hardest to sink you in *Plunder* — a world of Elizabethan piracy. And we're sure *Battle 1917* is more than a match for anyone — it should be — it won the Cambridge Award.

As if that's not enough, we've even created *Abyss* — a feast of excitement and hidden danger for those who dare defy the evils to be found beyond the Mountain of the Golden Lion.

So if you want trouble — we've got the games.

All available for Spectrum 48K at £6 (Abyss £5). Selected titles available from W.H. Smith, Boots, Rumbelows, Greens and all good computer shops or:
**Cases Computer Simulations Ltd.,
14 Langton Way, London SE3 7TL.**

CC Strategy Games.
S They're no pushover.

CHRISTINE COMPUTING

TI 99/4A

BLAST IT

Disarm bombs with a wire guided robot, bombs must be disarmed in order within a time limit. 5 levels of play, high score table.

£4.95

CORE!

A three part game, move left and right as you descend through the clouds, birds and aeroplanes. On to the caves and caverns then through the 3-D maze to the Core.

£4.95

FRUIT MACHINE

One arm bandit simulation featuring random hold, nudge and gamble. 'Reels' are fixed and can be learnt but motion is random.

£4.95

UFO

Blast the aliens as they appear from hyperspace, features 3 levels of play, refuel etc.

£4.95

SPUDZ

Score points as you collect potatoes without getting caught in the shadow cast by the setting sun or falling into your trench.

£4.95

COMMODORE 64

MUNCHER

100% machine code game making good use of the sound and graphic facilities of the 64. Munch your way around the maze avoiding the ghosts, etc.

£6.95

Send Cheques and Postal Orders to:

CHRISTINE COMPUTING, 6 FLORENCE CLOSE,

Please add 55p P&P per order.

ROCKMAN FILES

MUD is not a dirty substance found in your garden. It is the acronym for Multi-User Dungeon, perhaps the greatest adventure game yet written.

In the usual adventure vein you are transported to a fantasy land with the keyboard becoming your hands and feet and the screen your six senses. The computer needed to run MUD is a DEC 10, (a business Mini-computer), however, you can log into a remote DEC using a modem. I don't expect many *Games Computing* readers have a £1 1/4m mainframe and besides, it isn't much fun to play by yourself because MUD is multi user, which means that many people can play it by logging in either at the computer's site or by using a computer and a modem from anywhere in the world to play.

In the adventure you can meet other people's projections into this make-believe world. I have joined the game and so, for instance, if my character, Thor, wishes to open the portcullis but is not strong enough he can ask Zaal to help him. I have never met the person who plays Zaal but have had the odd chat with him in a CB sort of way. With another player's help I should be able to get through the portcullis.

MUD MUD GLORIOUS MUD

MUD is huge, so huge that it uses more memory than Essex University, where it resides, and it can only be run after midnight and at weekends when the demands on the computer are reduced. The adventure has hundreds of locations and objects with an extensive vocabulary. In this fantasy world treasure lies in many nooks and crannies, but beware — all that glisters is not gold — even the golden eagles egg traps you. This sticks to your hand so that you can't drop it. If you try to eat the egg you are informed that this is a golden egg, not a hard boiled one! The only way out is to give it to someone who must then pass it on and ad infinitum, or quit. Virtually every clever comment seems to have a reply. If you try the classic XYZZY command you are told that it is a very adventurous thing to say and that some people will try anything!

A sleek black cat may wander into the room, again beware there are two black cats in MUD, one quite tame and quite easy to kill, the other a ferocious feline who will probably destroy you in the attempt. Remember a cat has nine lives so you have to type 'kill cat' ten times before you are informed 'alright, alright, it's dead'. One use for a dead cat is to drop it in the swamp and claim some more points. You can save some time and trouble by just being curious . . . curiosity killed the cat.

MUD is so full of these little touches

Simon Rockman's file this month focuses on a fascinating multi-user adventure game in which players can 'talk' to each other during play.

Simon plays the game himself and gives you both an insight into MUD and some game-play tips.

that you can never get bored. The ultimate treasure is the crown, worth 4500 points. This is hidden in the ever shifting swamp, a special maze because anything dropped sinks and so you can't map it out by leaving objects and seeing if you end up going in circles. You turn treasure into points by dropping it into the swamp. This means that no one else can pick it up and get it unless the game is reset and the treasure restored to its proper place.

You can carry only a few objects at a time so you may have to choose between a treasure and a utensil such as a sword and hope that no one attacks you on the way back to the swamp or picks up the sword while you are gone. MUD has a type of character called a mobile. These are monsters controlled by the program such as the Dragon and the Vampire. To kill these a band of adventurers need to hunt down the creature hurling a combined strength to vanquish it.

WITCHES AND WIZARDS

When you quit your character is saved for later use so that you can build up experience. You go through many levels such as Warrior, Hero, Superhero, Enchanter and finally up to wizard (or witch, there are

female equivalents for most of the levels). The wizard is a very powerful character, he has the 'WIZ MODE' command which allows him to use magic, to move and pick up people and things, to cause or stop fighting, to force people to do things and generally take control. It is not unknown for a wizard to remove the cliff from the beach and put it down at the exit so that anyone entering the game falls to their death.

Wizards do have a code of conduct and are supposed to reward people for putting up with their pranks. Wizards are unlikely, to mess with hand to hand combat, but for mortals this is a good source of points and provides interaction with the other players. Whole groups of people can join the fray all from the safety of their own terminal.

MUD is free to play, if you do have access to a DEC 10 it can be obtained from Richard Bartle at Essex University. Otherwise you need a computer, a modem and a telephone. You can then link up and log in. Details on the Essex end should be available from:

THE COMPUTER SOCIETY
DEPARTMENT OF COMPUTER SCIENCE
UNIVERSITY OF ESSEX
COLCHESTER

MOOD CROME (Commodore)

8. FERRY, FERRY INTERSETTING

Bogus can transport all the items across the river. First he takes across the chicken. He returns alone, collects the fox and goes back to the chicken on the far side. He puts the fox ashore, and to prevent it being eaten, takes the chicken back to the original side with him. He puts the chicken back on the bank and rows across with the corn. Sure that the fox will not eat the corn, Bogus returns, collects the chicken and then rows back to join the fox and corn. Simple? Bogus is still sitting on the wrong side of the River Ella!

Readers with eagle eyes will have spotted a few discrepancies in the last couple of issues as far as the Puzzle Page goes. For instance in our March edition there was a No.9 entitled Falkovia Rules - which was, in fact, an answer to a previous issue. We have no excuse, but can only apologise to you, and Lou and Les Falk.

Rescue mission

You are in an airship that has a hole in it and is losing height rapidly. If you don't climb soon you will crash into the chimneys, but wait, what happens if we throw out all that Government gold we are carrying?

And so the scene is set. Your airship must drop its bags of gold out to gain height, but as gold is fairly expensive you must drop it into the very chimneys that you are in danger of crashing into so that they may be recovered!

When a bag of gold drops into a chimney you gain height. Miss the target and you will continue your decent.

RUNdowm

Lines	Action
10-90	Set variables
100-380	Instructions
390-490	Define CHARacters and COLORS
500-680	Set up screen
690-780	Draw chimneys
790-860	Plot chimney pots
870-1000	Check for drop, crash, and movement of airship
1010-1170	Crash routine
1180-1450	Drop routine
1460-1540	Movement of airship after suitcases have dropped
1550-1590	PRINT at routine
1600-1620	DATA for defining CHARacters
1630-1790	END routine
1800-1930	Play again

Variables Used

SCORE, LIVES	Self explanatory
HISC	Highest score
J,I,DEL,DELAY,Z,H	FOR/NEXT loop variables
R,D	Height of chimneys
RO,CO	Coordinates of suitcases
ROW,COL	coordinates of airship
M\$,F,G	PRINT at loops
Q\$,A\$	INPUT loops
K	Read KEYboard variable
GET	Used in CALL GCHAR

Conversion Clues

If you are going to convert this program for another computer it will be difficult, but remember that the TI-99/4A has a 24 by 32 screen and uses user-defined characters. Here are the commands used and their explanations.

**CALL CHAR(ASCII code number, hex-
adecimal string).** Used in defining the
characters where the ASCII code is the
character to be re-defined, and the hex-
adecimal string is the bit pattern of the new
character.

**CALL HCHAR(row number, column
number), ASCII code, number of repetitions.** This will draw a horizontal line
composed of the specified character.

CALL VCHAR(same as HCHAR). This is
the same as HCHAR but will draw a line
vertically.

**CALL GCHAR(row number, column
number, numeric variable).** Reads the
character in the specified screen location
into the variable specified.

CALL CLEAR. Clears the screen.

CALL SCREEN(colour code). Changes the
screen colour to that specified.

**CALL COLOR(character set, foreground
colour, background colour).** Changes the
colour of characters on screen.

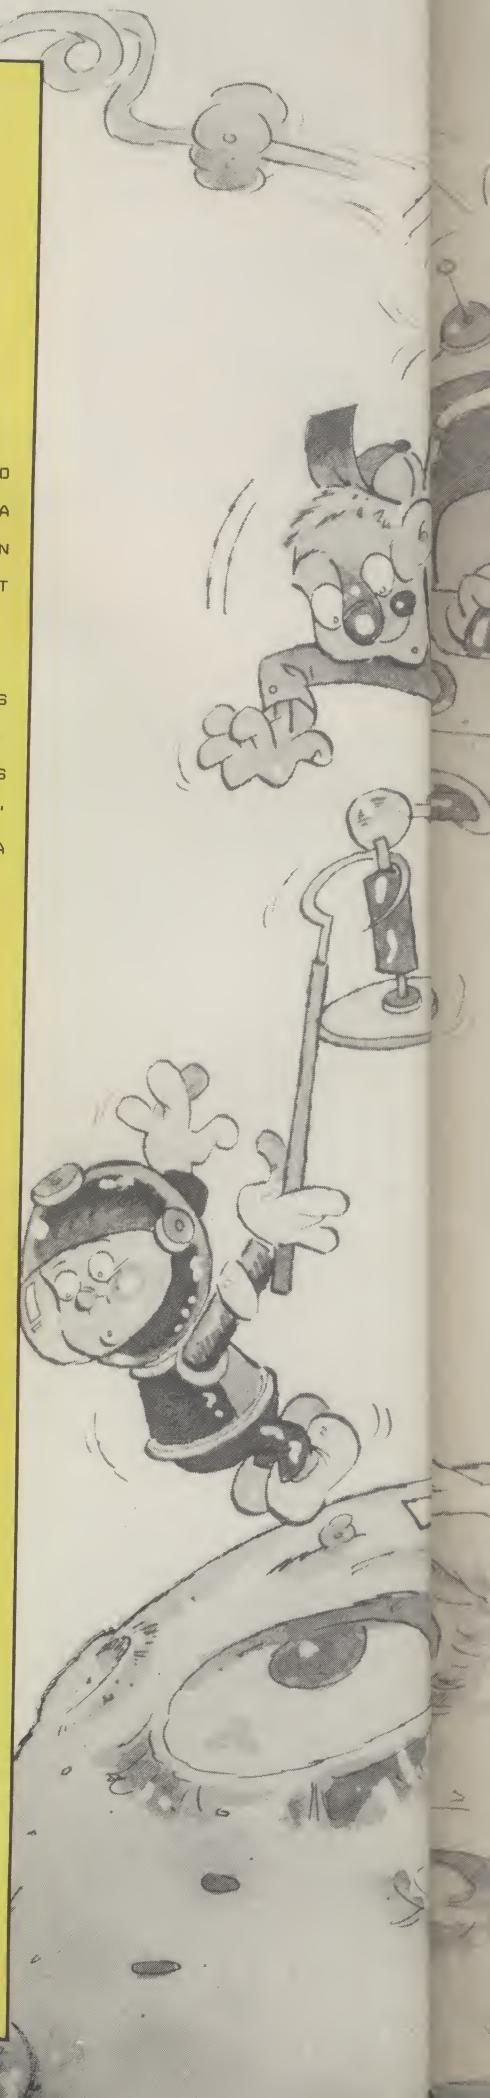

**CALL SOUND(duration, frequency,
volume).** Activates the sound generator.

**CALL KEY(key unit, numeric variable,
status).** Equivalent to INKEY or GET.

RUNS ON
BBC/ELECTRON

SEADOG

Run silent, run deep as a 'U' boat captain of your BBC 'A', 'B', or Acorn Electron. Torpedo enemy shipping and destroy the mines that are dropped on you. There is only one ship on the screen at any one time, but it moves, and changes direction very quickly. Instructions and controls are explained in the program. Good luck Captain.

RUNdown

Line	Action
10	Defines PROCIntro.
20	Sets up MODE.
30-120	Sets up variables.
130	Turns off flashing cursor.
140	Goes to PROCchar.
150	Repeat.
160	PROCshipmove.
170	PROCsubmove.
180	PROCminemove.
190-200	PROCtest (In case of anything getting hit).
210-270	Checks firing keys of submarine and random number for ship.
300-390	Defines characters.
420-490	Positions ship on screen.
520-600	Positions sub. on the screen and checks for keys being pressed.
630-710	Moves mine across and down the screen.
740-830	Movement of the torpedo.
790-830	Tests for anything that has been hit.
860-910	Tests if the mine has been hit.
940-1020	Checks if the ship has been hit.
1050-1090	Decreases the number of lives by 1.
1080	If number of lives = 0 then PROCend.
1120-1240	Defines the end.
1270-1760	Defines the Introduction.

Main Variables Used

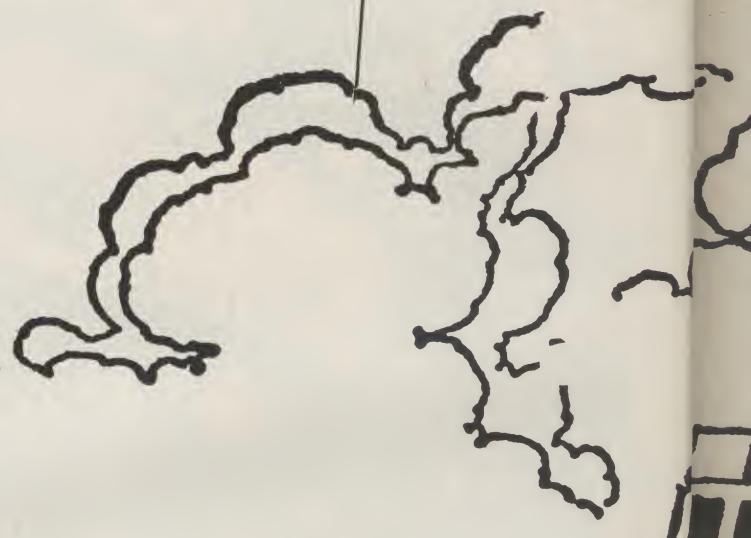

A2% =	X co-ordinates of the ship.
B2% =	Y co-ordinates of the ship.
SC% =	Score.
LIVES =	Number of lives left.
HS% =	High Score.
C% =	X co-ordinates of the submarine.
D% =	Y co-ordinates of the submarine.
E% =	Y co-ordinates of the mine.
F =	X co-ordinates of the mine.
X% =	X co-ordinates of the submarine's torpedo.
Y% =	Y co-ordinates of the submarine's torpedo.
XB% =	X co-ordinates of the ships mines.
YB% =	Y co-ordinates of the ships mines.
PET% and JIM% =	Variables of the flags used for the mine and torpedo.

VIDEO

Y I N G

BATTLEZONE

Runs on: Atari VCS

This is a fair attempt at the famous arcade game, and taking the limitations of the VCS/Atari 2600 into account they have done very well.

All the features of the true arcade game of Battlezone are here, except that the controls are a bit different due to only having one control stick. The game is based on you being the commander of a tank, trying to shoot up all the other tanks in the area that are out to get you. In addition these are other tanks to avoid, flying saucers, and aeroplanes causing untold hazards.

The screen display is taken up with a forward view from the turret, status information, and a radar scope. The radar tells you where the enemy is and what your view of them is. The status line gives you the score and your remaining lives. The forward view is very good and makes the most of the VCS's limited graphics.

The sound is impressive and realistic, control is good and accurate. The whole game is very well put together and should find a place on a lot of peoples shelves.

Made by: Atari
Price: £29.99

BATTLEZONE™

MOON PATROL

Runs on: Atari VCS

This game involves driving your moon buggy across a pot-holed lunar terrain with obligatory aliens trying to bomb you, maim you, or generally make your life a total misery.

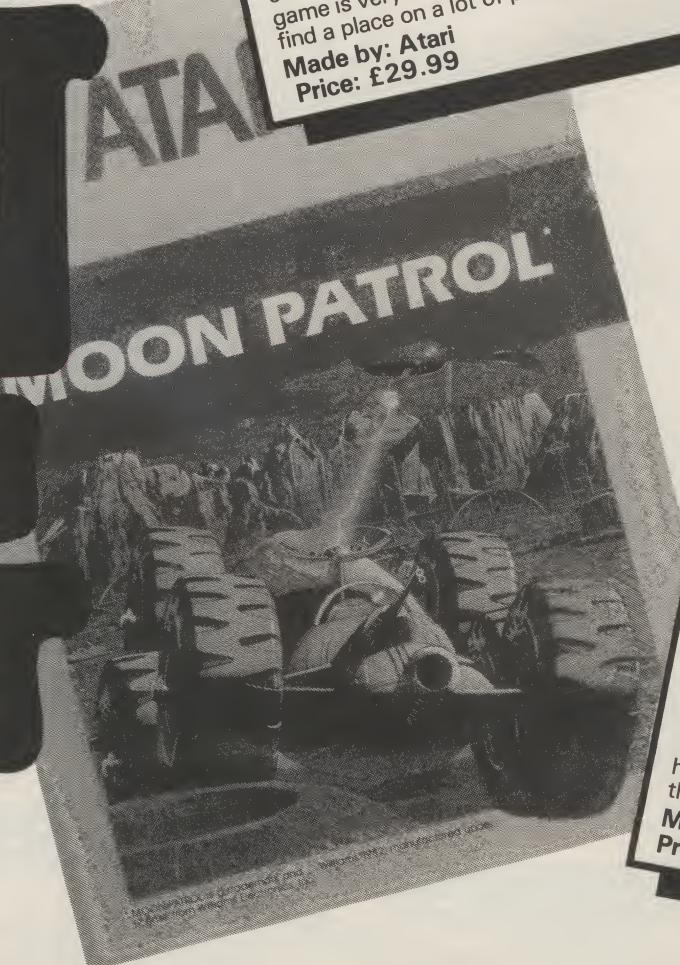

Points are awarded for jumping craters, shooting the aforementioned bug eyed monsters, and for completing each section of the course.

The graphics are fairly uninspiring and leave little to be desired. On the whole the game is not up to Atari's usual high standards and doesn't really warrant the selling price.

This sort of game will only sell to 'moon buggy buffs', and people whose local video games shop is out of stock of everything else.

Atari can do much better, because I have seen better on the VCS, so why don't they?

Made by: Atari
Price: £29.99

POLE POSITION

POLE POSITION

Runs on: Atari VCS

It is hard to believe that the grandfather of modern video games, the Atari VCS, first launched in 1977, can still have games like this programmed for it.

I wouldn't say that this game is identical to the arcade game that you pay money to play, but it is a good try and has most of the features associated with it and the graphics are fast and furious.

The scenario is of a grand prix race circuit with you as a competing driver. There is one qualifying lap which you have to complete in a preassigned time. If you can do that then it is onto the race itself. There are other cars to overtake and the road is constantly twisting and turning. Points are scored for passing other cars and for completing laps.

The graphics are in full perspective with the road and scenery turning as you do. The whole effect is very realistic. The control is a bit odd, with pushing the stick forward to change into a lower gear, but that is a minor point. The sound is adequate with realistic engine noises. Another good game from Atari.

Made by: Atari

Price: £29.99

GORF

Runs on: Colecovision

As with all of Colecovision's better games, this one is a straight reproduction of the arcade game by the same name.

The game is very good and has the high standard of graphics that we have come to expect from CBS. The sound is good, and control is only marred by having to use the standard Colecovision controllers.

There are four levels of difficulty and a one or two player option. All four missions of the original are implemented with gruesome Gorfian attackers to contend with in all their guises.

Instructions are comprehensive and have screen shots of what should be happening at what time, and a detailed rundown of what 'thing' has what score, and what 'thing' on the screen has what meaning. Altogether this is a well put together game. Definitely one for your library.

Made by: Colecovision

Price: £29.95

SPACE FURY

Runs on Colecovision

As the box proclaims, Space Fury is just like the arcade game.

It starts off with a one eyed green alien telling you what he thinks of earth people, and how he is going to beat you into submission. Then you start the game proper, with your ship Asteroids like in the centre of the screen. The controls are Asteroids like as well with thrust, rotate left, rotate right, and fire.

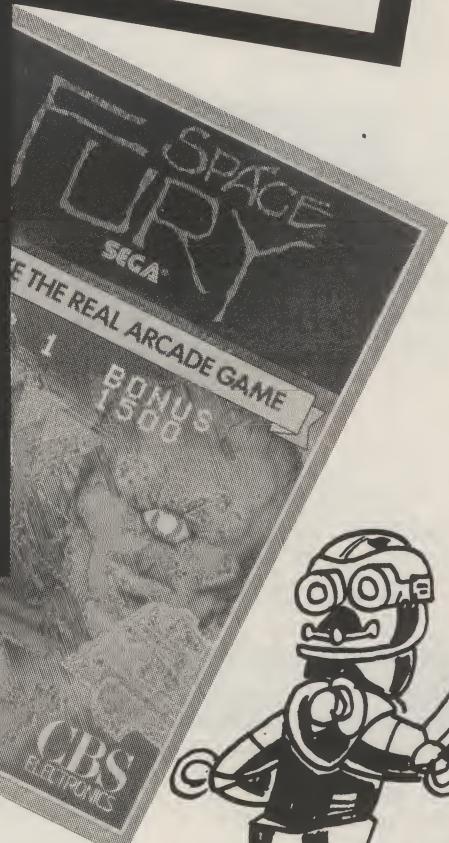

There are four waves of aliens each wave being nastier than the previous one. When a wave is completed you have the chance of docking with one of three motherships. Each mothership will modify your firepower in some way, enabling you to fire backwards, sideways, or triple your forward fire power.

The game features four skill levels and one or two player options. The graphics are up to the usual colecovision standards of excellance. The opening page is very good with a very realistic, and gruesome, looking bug eyed monster. This monster also appears at the end where he tells you what he thinks of your performance against him (her?).

The game is quite enjoyable to play and can get quite hair-raising at times. The price tag is quite high when compared to cartridges for home computers, but I think it's worth paying for.

SCRAMBLE

Actual picture of screen on
ORIC 48K

Your mission is to penetrate the enemy scramble system and destroy their headquarters. You will start with three of our latest spacefighters equipped with repeating cannon and twin bomb launcher.

If you succeed in evading the elaborate ground defences, you will arrive at the Cave where flying becomes more difficult. In the cave are UFOs, after which you must avoid a hail of meteorites. Very few pilots succeed this far, but if you do, then you must enter the Fortress, followed by the Maze. If you manage to destroy Enemy Headquarters, then your reward will be a more difficult mission! One or two player game.

Machine Language, High Speed, Arcade Action. Full colour graphics with sound. Keyboard or Joystick control.

Available on tape for
ORIC £5.50 DRAGON 32 £8
TANDY COLOUR £8

(Tandy colour version only available at Tandy Shops)
